Glossary

Appropriate Assessment

The obligation to undertake Appropriate Assessment derives from Article 6(3) and 6(4) of the Habitats Directive 92/43/EEC. AA is a focused and detailed impact assessment of the implications of a strategic action (such as a plan or programme) or project, alone and in combination with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.

Biodiversity and Flora and Fauna

Biodiversity is the variability among living organisms from all sources including inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems' (United Nations Convention on Biological Diversity 1992).

Flora is all of the plants found in a given area.

Fauna is all of the animals found in a given area.

Environmental Problems

Annex I of Directive 2001/42/EC of the European Parliament and of the Council of Ministers, of 27th June 2001, on the assessment of the effects of certain Plans and programmes on the environment (the Strategic Environmental Assessment Directive) requires that information is provided on 'any existing environmental problems which are relevant to the plan or programme', thus, helping to ensure that the proposed strategic action does not make existing environmental problems worse.

Environmental problems arise where there is a conflict between current environmental conditions and ideal targets. If environmental problems are identified at the outset they can help focus attention on important issues and geographical areas where environmental effects of the plan or programme may be likely.

Environmental Vectors

Environmental vectors are environmental components, such as air, water or soil, through which contaminants or pollutants, which have the potential to cause harm, can be transported so that they come into contact with human beings.

Mitigate

To make or become less severe or harsh.

Mitigation Measures

Mitigation measures are measures envisaged to prevent, reduce and, as fully as possible, offset any significant adverse impacts on the environment of implementing a human action, be it a plan, programme or project. Mitigation involves ameliorating significant negative effects. Where there are significant negative effects, consideration should be given in the first instance to preventing such effects or, where this is not possible, to lessening or offsetting those effects. Mitigation measures can be roughly divided into those that: avoid effects; reduce the magnitude or extent, probability and/or severity of effects; repair effects after they have occurred; and compensate for effects, balancing out negative impacts with other positive ones.

Protected Structure

Protected Structure is the term used in the Planning and Development Act and Regulations (as amended) to define a structure included by a planning authority in its Record of Protected Structures. Such a structure shall not be altered or demolished in whole or part without obtaining planning permission or confirmation from the planning authority that the part of the structure to be altered is not protected.

Recorded Monument

A monument included in the list and marked on the map that comprises the Record of Monuments and Places that is set out county by county under Section 12 of the National Monuments (Amendment) Act, 1994 by the Archaeological Survey of Ireland. The definition includes Zones of Archaeological Potential in towns and all other monuments of archaeological interest that have so far been identified. Any works at or in relation to a recorded monument requires two months' notice to the former Department of the Environment, Heritage and Local Government (now Department of Culture, Heritage and the Gaeltacht) under Section 12 of the National Monuments (Amendment) Act, 1994.

Scoping

Scoping is the process of determining what issues are to be addressed, and setting out a methodology in which to address them in a structured manner appropriate to the plan or programme. Scoping is carried out in consultation with appropriate environmental authorities.

Strategic Actions

Strategic actions include *Policies/Strategies*, which may be considered as inspiration and guidance for action and which set the framework for Plans and programmes; *Plans*, sets of co-ordinated and timed objectives for the implementation of the policy; and *Programmes*, sets of projects in a particular area.

Strategic Environmental Assessment (SEA)

Strategic Environmental Assessment (SEA) is the formal, systematic evaluation of the likely significant environmental effects of implementing a plan or programme before a decision is made to adopt it.

Strategic Environmental Objective (SEO)

Strategic Environmental Objectives (SEOs) are methodological measures developed from policies which generally govern environmental protection objectives established at international, Community or Member State level and are used as standards against which the provisions of the Draft Plan and the alternatives can be evaluated in order to help identify which provisions would be likely to result in significant environmental effects and where such effects would be likely to occur, if - in the case of adverse effects - unmitigated.

Section 1 SEA Introduction and Background

1.1 Introduction and Terms of Reference

This is the Strategic Environmental Assessment (SEA) Environmental Report for the Dingle Peninsula Visitor Experience Development Plan (hereafter referred to as 'the Plan'). It has been undertaken by CAAS Ltd. on behalf of Fáilte Ireland.

1.2 SEA Definition

Environmental assessment is a procedure that ensures that the environmental implications of decisions are taken into account before such decisions are made. *Environmental Impact Assessment*, or EIA, is generally used for describing the process of environmental assessment for individual projects, while *Strategic Environmental Assessment* or SEA is the term that has been given to the environmental assessment of plans and programmes, which help determine the nature and location of individual projects taking place. SEA is a systematic process of predicting and evaluating the likely significant environmental effects of implementing a proposed plan or programme, in order to ensure that these effects are adequately addressed at the earliest appropriate stages of decision-making in tandem with economic, social and other considerations.

1.3 SEA Directive and its transposition into Irish Law

Directive 2001/42/EC of the European Parliament and of the Council of Ministers, of 27th June 2001, on the Assessment of the Effects of Certain Plans and Programmes on the Environment, referred to hereafter as the SEA Directive, introduced the requirement that SEA

be carried out on plans and programmes which are prepared for a number of sectors, including tourism.

The SEA Directive was transposed into Irish Law through the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (Statutory Instrument Number (SI No. 435 of 2004) and the Planning and Development (Strategic Environmental Assessment) Regulations 2004 (SI No. 436 of 2004). Both sets of Regulations became operational on 21st July 2004. The Regulations have been amended by the European Communities (Environmental Assessment of Certain Plans and Programmes) (Amendment) Regulations 2011 (SI No. 200 of 2011) and the Planning and Development (Strategic Environmental Assessment) (Amendment) Regulations 2011 (SI No. 201 of 2011).

1.4 Implications for the Plan

Article 3 para. 2 of the SEA Directive, introduced the requirement that SEA be carried out on plans and programmes, or modifications to these:

- a) which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to the EIA Directive¹, or
- b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of the Habitats Directive² i.e. the Directive requires that SEA is undertaken where Stage 2 Appropriate Assessment (AA)³ is being undertaken on plans, programmes etc.

¹ Directive 2011/92/EU of the European Parliament and of the Council of 13 December 2011, on the assessment of the effects of certain public and private projects on the environment (codification)

² Council Directive 92/43/EEC on the Conservation of natural habitats and of wild fauna and flora

³ AA is provided for by the Habitats Directive and is a focused and detailed impact assessment of the implications of a strategic action or project, alone and in combination

The tourism sector Plan does not contribute towards the framework for future development consent of projects listed in Annexes I and II to the EIA Directive and does not contain provisions or define rules that must be complied with when administrative consent of other projects is being granted.

The Plan does, however, fall under the definition of a "plan" contained within the Birds and Natural Habitats Regulations 2011 (as amended) and therefore must be screened for the need to undertake AA. The Screening for AA has found that the Plan has the potential, if unmitigated, to affect the ecological integrity of European Sites and that measures to ensure that potential effects are avoided are required. Taking into account the requirements of the Habitats Directive and recent case law (including, European Court of Justice Judgement C323-17), Stage 2 AA must therefore be carried out for the Plan. As Stage 2 AA is being undertaken on the Plan, SEA must also be undertaken for this Plan - see requirement at b) above. An SEA Determination is provided at Appendix I.

This SEA Environmental Report provides the findings of the SEA to date and should be read in conjunction with the Draft Plan. This report will be placed on public display and may be altered in order to take account of recommendations contained in submissions and/or in order to take account of any changes which are made to the Plan on foot of submissions. Fáilte Ireland will take into account the findings of this report and other related SEA output during their consideration of the Plan and before it is finalised. When the Plan is finalised, an SEA Statement will be prepared which will summarise, inter alia, how environmental considerations have been integrated into the Plan.

with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.

Section 2 The Draft Plan

2.1 Overview

The **focus** of the Dingle Peninsula Visitor Experience Development Plan (VEDP) is to motivate international tourists to visit and stay in the local communities across the peninsula, increase the economic dividend generated by international visitors to the area while extending the season. The challenge for all destinations is to deliver enough memorable moments that will inspire visitors to share their experience and also encourage them to return. The plan is designed to stimulate increased dispersion of visitors across Dingle Peninsula throughout the year. The enhancement of existing experiences and the development of new visitor experiences, based on the recommended development themes, are designed to address the issues of seasonality, regionality while realising increased socio-economic benefits.

The **overarching objective** of the Plan is to support the ongoing tourism development of the Dingle Peninsula, evolving from visitor attraction to a year-round tourism destination. The purpose of the Plan is to present the stories and destination themes of the Dingle Peninsula and organise them into a development framework for adoption as a commercial action plan for the next three to five years. This framework will provide the context for tourism operators and stakeholders to work in partnership, create new and improve existing visitor experiences, and communicate cohesive and unified stories to the visitor.

The **key focus areas of the Plan** are to:

- Deliver a Visitor Experience Development Plan (VEDP) as a 3-5 year commercial development plan for an area;
- Ensure the local experiences are brought to life through the development of the optimal mix of hero and ancillary products that get people into an area and keep them there;
- Unlock the economic growth potential of an area by progressing a range of key initiatives that will motivate and facilitate potential tourists to visit and stay in the local area;
- Develop a sustainable basis for commercial development centred on creating strong signature, supporting and ancillary experiences that are commoditised through the creation of saleable experiences that excite consumers and buyers alike; and
- Create the conditions to encourage international visitors to immerse themselves actively in the locale, interact with people; engage the senses

by getting active in nature; attend festivals; learn the history and stories of the places; and enjoying the food and entertainment on offer. The focus is to deliver memorable moments that inspire tourists to not only share their experience with others but also makes them want to return.

Based on future engagement and collaboration, the **key objectives** of the Plan as a three to five year commercial plan are:

- to develop compelling local experiences that are aligned to two key international marketing themes: Inspired Culture and Timeless Wellbeing
- to develop compelling experiences that: motivate visitors to stay longer and spend more; extend the length of the season; align to the Wild Atlantic Way brand and target markets; sustain and increase job creation in the local area; protect the special environmental, cultural and linguistic character of the region; and become a catalyst for a fresh approach to sustainable destination development;
- develop the Dingle Peninsula as a leading international destination as opposed to a one day visitor attraction;
- leverage the uniqueness of the natural and cultural heritage assets and devise innovative experiences for visitors to immerse themselves in Irish language and culture;
- deliver one of the most renowned walking routes in the world; and
- build on global macro tourism trends to become an internationally renowned natural wellbeing destination delivered through the natural and cultural assets of the area.

Implementing the Plan will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The Plan does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent.

Fáilte Ireland provides funding for sustainable tourism projects that emerge as part of specific, competitive, themed and time-bound grant schemes or as part of wider strategic partnerships. These include projects relating to land use, infrastructural development and land use activities and attractions. Reference made to such projects included in the Plan does not guarantee funding. While funding is provided to certain projects, Fáilte Ireland is not the developer.

In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, Fáilte Ireland's stakeholders shall be required to demonstrate compliance⁴ with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 "Site Maintenance Guidelines" and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 "Environmental Management for Local Authorities and Others" (and any subsequent replacements).

The Dingle Peninsula is under the **Wild Atlantic Way key proposition**, which is to "Experience one of the wildest, most enhancing and culturally rich coastal touring routes in the world. Wherever you travel along the Wild Atlantic Way you'll find magic, adventure, history and beauty in abundance".

The VEDP identifies **two overarching themes** for the Wild Atlantic Way key proposition ("Inspired Culture" and "Timeless Wellbeing") under both of which four **Destination Experience Themes** are identified, with which visitors can connect with that showcase the key proposition, and associated **Hero Products** through which the Destination Themes can be accessed. **Supporting Experiences** (what each business does to bring the signature experience to life) and **Ancillary Experiences** (how the wider tourism offering supports the regional themes) are also identified.

Destination Experience Themes and associated **Hero Products** under the **overarching theme** of "Inspired Culture" are as follows:

Theme: The Gaeltacht Life

- Basket Islands
- Basket Island Visitor centre
- Irish Language Schools and vibrant Irish language in the community
- An Tinteán Ceoil
- Oidhreacht Corca Dhuibhne

Theme: Learning on the Edge

- Dingle Cookery School
- Louis Mulcahy Pottery Workshops
- Watersports on the North Shore
- Irish language learning at Oidhreacht Corca Dhuibhne

Theme: Myths to Local Legends

- Mount Brandon
- Conor Pass
- Annascaul Lake
- Gallarus Oratory

Theme: Centuries of Creative Spirit

- Louis Mulcahy Pottery
- Blasket Islands & Blasket Island Centre
- Brian De Staic, Jeweller

Destination Experience Themes and associated **Hero Products** under the **overarching theme** of "Timeless Wellbeing" are as follows:

Theme: Seasons of Vitality

- Dingle Way
- Sleah Head Drive
- Conor Pass
- Dingle Sea Safari
- Dingle Peninsula Blueways
- Dingle Marina

Theme: Wellbeing of Adventure

- Dingle Way
- Climb Mount Brandon
- Surf the Wild Atlantic Way at Inch Beach
- Watersports in Castlegregory and North Shore
- Scuba Diving in the Maharees
- SUP Tours Dingle

Theme: A Social Energy

- Irish Cultural Sessions in traditional pubs around Dingle Peninsula
- An Tinteán Ceoil, Cloghane

Theme: Peninsula of Contrasts

- The Dingle Way
- Blasket Islands
- Sleah Head Drive
- Mount Brandon
- Sea Safari & Harbour Cruises
- Conor Pass
- Eco Marine Tours

Central to the VEDP is the **Work Plan** that outlines the projects identified to deliver the Dingle Peninsula VEDP over the next three to five years. The work streams are categorised under four sections (A. Catalyst Projects, B. Experience Development Projects based on VEDP Themes, C. Destination Enabling Projects and D. Local Industry Focused projects) to provide a basis for all stakeholders to engage with the VEDP.

The Work Plan identifies the project lead organisations and partners as well as associated timeframes for delivery.

The following **Catalyst Projects** are designed to create long-term destination impacts

⁴ Demonstration of compliance may be supported by monitoring undertaken by the beneficiary.

creating sustainable conditions for experience development while building on the inherent strengths of the destination. The catalyst projects are included based on their strategic capacity to create a globally leading visitor proposition, facilitate tourism dispersion across the Dingle Peninsula and sustain the rich cultural heritage of the area:

- Assess the feasibility of enhancing the Dingle Way to become an internationally renowned walking destination and provide the necklace to integrate all themes.
- Assess the feasibility of developing a new Traffic Management Plan to investigate options to address current traffic movement throughout the Dingle Peninsula.
- Assess the feasibility of Dingle Hospital delivering a gateway visitor experience for the Dingle Peninsula and provide visitor interpretation for the stories of the Peninsula while contributing to the sustainable tourism development of the destination.
- Assess the development of the Brandon Basecamp as a catalyst for developing the potential of the area as a focal point for walking and leisure activities.
- Assess the feasibility of promoting and expanding the eight identified Blueway sites across the Dingle peninsula.
- Support the development of a new focus on the Irish language and integration with visitor experiences.
- Assess the potential to extend the opening period of the Blasket Islands Visitor Centre while assessing the delivery of improved mooring facilities on the Great Blasket Island.
- Assess the feasibility of improved levels of visitor interpretation focused on the Maherees and the incorporation of the Seven Hogs stories.
- Assess the feasibility of enhancing the archaeology story of the Dingle Peninsula to enhance visitor experience and act as an information and interpretation base for surrounding key sites.
- Assess the feasibility of establishing an Arts & Cultural Centre that will enhance the visual and performance arts level of provision while enhancing visitor evening economy options.

2.2 Relationship with other relevant Plans and Programmes

The Draft Plan sits within a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These documents include plans and programmes such as those detailed in Appendix II⁵ (see also, Section 4

“Environmental Baseline”, Section 5 “Strategic Environmental Objectives”, Section 6 “Description of Alternatives and Section 9 “Mitigation Measures”). These documents have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSEs) and lower tier Development Plans and Local Area Plans. The RSEs for the Southern Region set out objectives relating to tourism development that have been subject to environmental assessment, including those relating to: enhancing provision of tourism and leisure amenity; promoting tourism activity; developing a road network and public transport services, facilitating improved visitor access and longer dwell times; developing walking and cycling trails, opening greater accessibility to the marine and countryside environment by sustainable modes; and facilitating appropriate tourism development, including that relating to greenways, blueways and peatlands. When adopted, the RSEs will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSEs and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

⁵ Appendix II is not intended to be a full and comprehensive review of EU Directives, the transposing regulations or the regulatory framework for environmental protection and

management. The information is not exhaustive and it is recommended to consult the Directive, Regulation, Plan or Programme to become familiar with the full details of each.

Section 3 SEA Methodology

3.1 Introduction to the Iterative Approach

Figure 3.1 provides an overview of the integrated Plan preparation, SEA and Appropriate Assessment (AA) processes. The preparation of the Plan, SEA and AA have taken place concurrently and the findings of the SEA and AA have informed the Plan.

The process is currently at a stage where the findings of this report will be placed on public display as part of the required statutory public consultations. AA documents will also accompany the Plan on public display. Submissions made on the Plan and associated

documents, including SEA and AA documents, will be responded to and updates made to the documents where relevant.

Submissions made on the Plan will be responded to and the Plan will be updated as appropriate. When the Plan is finalised, the AA and SEA documents will be finalised and an SEA Statement, which will include information on how environmental considerations were integrated into the Plan, will be prepared. The Plan will be implemented and environmental monitoring – as well as planning and project development and associated environmental assessments and administrative consent of projects – will be undertaken.

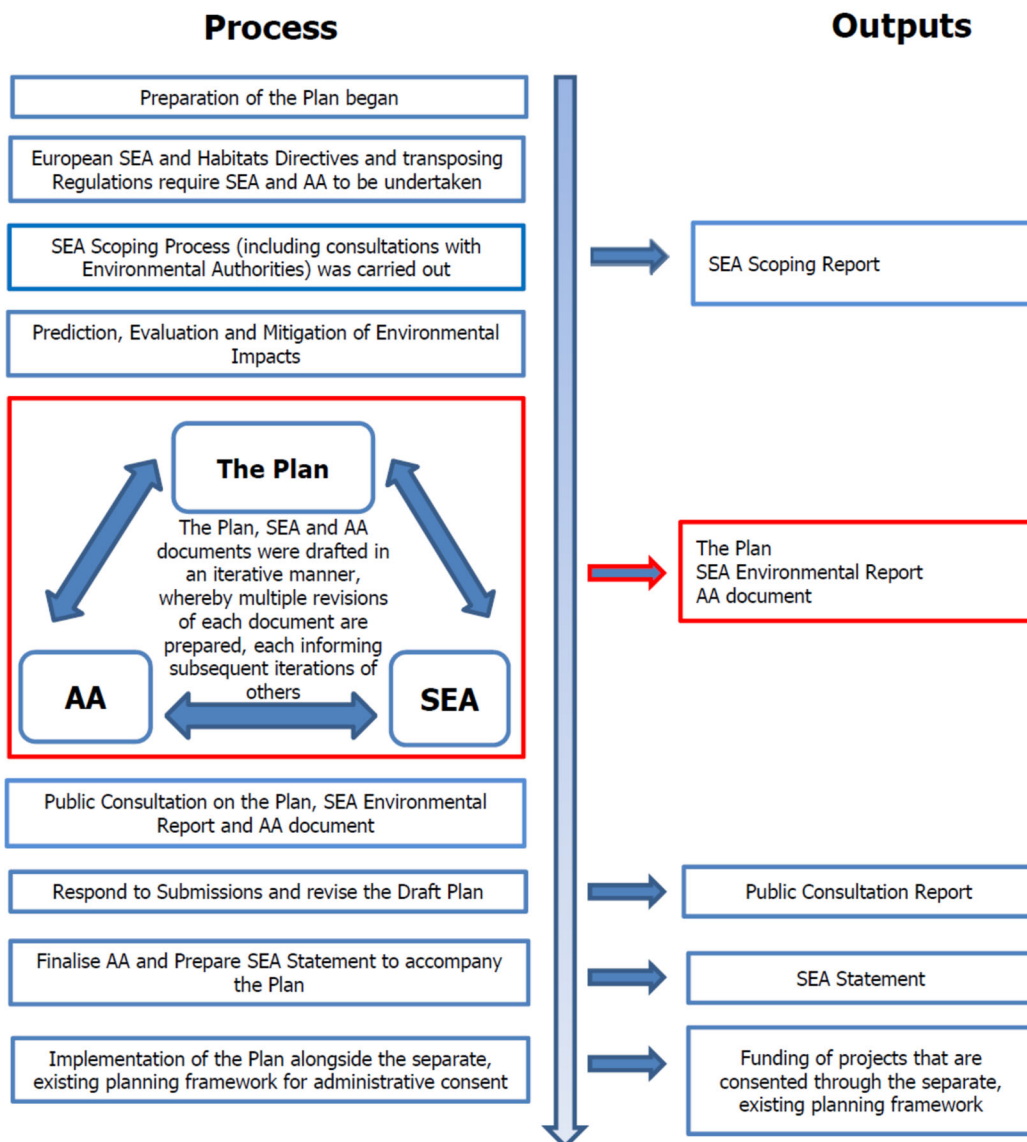

Figure 3.1 Overview of the SEA/AA/Plan-preparation Processes

3.2 Appropriate Assessment and Integrated Biodiversity Impact Assessment

3.2.1 Appropriate Assessment

Stage 2 Appropriate Assessment (AA) is being undertaken alongside preparation of the Plan. The requirement for AA is provided under the EU Habitats Directive (Directive 1992/43/EEC).

The emerging conclusion of the AA is that the Plan will not affect the integrity of the European Sites, alone or in combination with other plans or projects.

The preparation of the Plan, SEA and AA has taken place concurrently and the findings of the AA have informed the SEA.

3.2.2 Integrated Biodiversity Impact Assessment

Many elements of Integrated Biodiversity Impact Assessment as detailed in the EPA's (2013) Practitioner's Manual have been aligned with in the undertaking of the SEA for the Plan. These include:

Scoping

- Biodiversity-relevant issues were identified for consideration at scoping stage and these are now detailed in Section 4.
- Reference to a zone of influence is provided at Section 4.

Baseline

- Biodiversity data sources relevant for this local level assessment have been identified and datasets collated/gathered.
- The biodiversity baseline addresses designated sites and other habitats and species of ecological value.
- AA information has been incorporated into the SEA baseline.

Alternatives

- Impacts upon biodiversity are considered under each of the alternatives and potential conflicts can be mitigated.

⁶ These components comprise biodiversity, fauna, flora, population, human health, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors.

Impact assessment

- Effects on biodiversity are identified and assessed and the AA considers the interrelationship between biodiversity and potential effects on European Sites.

Mitigation and monitoring

- Taking into account all measures contained within the Plan, all the proposed mitigation measures deriving from the various processes were generally consistent and compatible.
- Indicators and associated targets have been included in SEA for monitoring European Sites.

Reporting

- This SEA ER addresses all biodiversity-related considerations relevant for this level of assessment.
- This SEA ER contains all biodiversity-relevant information, data, figures and maps relevant for this level of assessment.
- This SEA ER has been informed by the AA findings.

Communication and consultation

- Submissions received have been taken on board.
- The preparation of the Plan, SEA and AA have taken place concurrently and the findings of the AA have informed the SEA.

3.3 Scoping

3.3.1 Introduction

The scope of environmental issues to be dealt with by the SEA together with the level of detail to which they are addressed was broadly decided upon taking into account the collection of environmental baseline data and input from environmental authorities. Scoping allowed the SEA to become focused upon key issues relevant to the environmental components that are specified under the SEA Directive⁶.

As the Plan is not likely to have significant effects on the environment in another Member State, transboundary consultations as provided for by Article 7 of the SEA Directive were not undertaken.

3.3.2 Scoping Notices

Relevant environmental authorities⁷ identified under the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations, as amended, were sent SEA scoping notices by Fáilte Ireland indicating that submissions or observations in

⁷ The following authorities were notified: The Environmental Protection Agency, the Department of Communications, Climate Action and Environment, the Department of Agriculture, Food and the Marine and the Department of Culture, Heritage and the Gaeltacht.

relation to the scope and level of detail of the information to be included in the environmental report could be made to Fáilte Ireland.

3.3.3 Scoping Submissions

Submissions from the following environmental authorities were made during the SEA Scoping process:

- c) Environmental Protection Agency;
- d) Department of Agriculture, Food and Marine;
- e) Department of Communication, Climate Action and Environment; and
- f) Department of Culture, Heritage and the Gaeltacht.

These submissions were taken into account during preparation of the SEA and informed the various SEA recommendations that have been integrated into the Plan (see Section 9).

3.4 Alternatives

The SEA Directive requires that reasonable alternatives (taking into account the objectives and the geographical scope of the plan or programme) are identified, described and evaluated for their likely significant effects on the environment. In accordance with this requirement, alternatives for the Plan are examined in Section 7.

3.5 Environmental Report

In this SEA Environmental Report, which is placed on public display alongside the Draft Plan, the likely environmental effects of the Draft Plan and the alternatives are predicted and their significance evaluated.

The Environmental Report provides Fáilte Ireland, stakeholders and the public with a clear understanding of the likely environmental consequences of implementing the Draft Plan.

Mitigation measures to prevent or reduce significant adverse effects posed by the Draft Plan are identified in Section 9 - these have been integrated into the Plan.

This Environmental Report will be updated in order to take account of recommendations contained in submissions and in order to take

account of changes that are made to the original, Draft Plan that is being placed on public display. Changes to the Draft Plan will be examined for the need to undertake SEA and AA.

This Environmental Report contains the information specified in Schedule 2 of the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (SI No. 435 of 2004) as amended (see Table 3.1).

3.6 The SEA Statement

On finalisation of the Plan by Fáilte Ireland, an SEA Statement will be prepared which will include information on:

- How environmental considerations have been integrated into the Plan, highlighting the main changes to the Plan that resulted from the SEA process;
- How the SEA Environmental Report and consultations have been taken into account, summarising the key issues raised in consultations and in the Environmental Report indicating what action was taken in response;
- The reasons for choosing the Plan in the light of the other alternatives, identifying the other alternatives considered, commenting on their potential effects and explaining why the Plan as adopted was selected; and
- The measures decided upon to monitor the significant environmental effects of implementing of the Plan.

3.7 Difficulties Encountered

No significant difficulties were encountered in undertaking the assessment.

Table 3.1 Checklist of Information included in this Environmental Report

| Information Required to be included in the Environmental Report | Corresponding Section of this Report |
|---|---|
| (A) Outline of the contents and main objectives of the plan or programme, and of its relationship with other relevant plans and programmes | Sections 2, 5 and 8 |
| (B) Description of relevant aspects of the current state of the environment and the evolution of that environment without implementation of the plan or programme | Section 4 |
| (C) Description of the environmental characteristics of areas likely to be significantly affected | Sections 4, 7 and 8 |
| (D) Identification of any existing environmental problems which are relevant to the plan or programme, particularly those relating to European Sites | Section 4 |
| (E) List environmental protection objectives, established at international, EU or National level, which are relevant to the plan or programme and describe how those objectives and any environmental considerations have been taken into account when preparing the Plan | Sections 5, 7, 8 and 9 |
| (F) Describe the likely significant effects on the environment | Sections 7 and 8 |
| (G) Describe any measures envisaged to prevent, reduce and as fully as possible offset any significant adverse environmental effects of implementing the plan or programme | Section 9 |
| (H) Give an outline of the reasons for selecting the alternatives considered, and a description of how the assessment was undertaken (including any difficulties) | Sections 3, 6, 7 and 8 |
| (I) A description of proposed monitoring measures | Section 10 |
| (J) A non-technical summary of the above information | Non-Technical Summary |
| (K) Interrelationships between each environmental topic | Addressed as it arises within each Section |

Section 4 Environmental Baseline

4.1 Introduction

Reflecting the specifications in the SEA Directive, the relevant aspects of the current state of the environment for the following environmental components are identified in this section:

- Biodiversity, Flora and Fauna;
- Population and Human Health;
- Material Assets;
- Water;
- Air and Climatic Factors;
- Landscape;
- Cultural Heritage;
- Soil; and
- The interrelationship between the above factors.

Information which is relevant to planning and project development and associated environmental assessments and administrative consent of projects is identified (note that Article 5 of the SEA Directive, in accordance with the established European principle of subsidiarity, requires that the Environmental Report includes the information that may reasonably be required taking into account, inter alia, the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment).

4.2 Geographical Scope of the Assessment

The area to which the Plan relates covers part of the Dingle Peninsula in County Kerry (see Figure 4.1).

4.3 National Reporting on the Environment

The EPA's "*Ireland's Environment - An Assessment 2016*" report provides an integrated assessment of the overall quality of Ireland's environment, the pressures being placed on it and the societal responses to current and emerging environmental issues. This report has informed various parts of the environmental baseline provided below. The

key environmental challenges or messages identified by the report are:

Environment and Health and Wellbeing

Recognising the benefits of a good quality environment to health and wellbeing.

Climate Change

Accelerating mitigation actions to reduce greenhouse gas emissions and implement adaptation measures to increase resilience in dealing with adverse climate impacts.

Implementation of Legislation

Improving the tracking of plans and policies and the implementation and enforcement of environmental legislation to protect the environment.

Restore and Protect Water Quality

Implementing measures that achieve ongoing improvement in the environmental status of water bodies from source to the sea.

Sustainable Economic Activities

Integrating environmental sustainability ideas and performance accounting across economic sectors and sectoral plans should be a key policy for growth.

Nature and Wild Places

Protecting pristine and wild places that act as biodiversity hubs, contributing to health and wellbeing, and providing tourism opportunities

Community Engagement

Informing, engaging and supporting communities in the protection and improvement of the environment.

The report highlights that high quality green and blue spaces are not just for nature but are for peoples' health and wellbeing, particularly in the context of an increasingly urban society and increasing settlement densities.

4.4 Sustainable Development Goals

Implementation of the Plan will contribute towards efforts to achieve a number of the 17 Sustainable Development Goals of the 2030 Agenda for Sustainable Development, which were adopted by world leaders in 2015 at a United Nations Summit and came into force in 2016. These Goals include:

- Goal 3. Ensure healthy lives and promote well-being for all at all ages.
- Goal 6. Ensure availability and sustainable management of water and sanitation for all.

- Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all.
- Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.
- Goal 9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.
- Goal 11. Make cities and human settlements inclusive, safe, resilient and sustainable.
- Goal 12. Ensure sustainable consumption and production patterns.
- Goal 13. Take urgent action to combat climate change and its impacts.
- Goal 15. Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

4.5 Likely Evolution of the Environment in the Absence of the Plan

The likely evolution of the environment in the absence of a plan would resemble the environmental effects that are described for Alternative 1 (Business as Usual) under Section 7.

Figure 4.1 Area to which the Plan relates

4.6 Biodiversity and Flora and Fauna

4.6.1 Overview

Information on biodiversity and flora and fauna which is relevant to project planning and development and associated environmental assessment and administrative consent of projects includes available information on designated ecological sites and protected species, ecological connectivity (including stepping stones and corridors) and non-designated habitats.

Ecological designations include:

- Special Areas of Conservation⁸ (SACs) and Special Protection Areas⁹ (SPAs);

- Proposed Natural Heritage Areas (pNHAs)¹⁰;
- Nature Reserves;
- Ramsar Sites¹¹;
- Marine Protected Areas (MPAs)¹²;
- Salmonid Waters¹³;
- Shellfish Waters¹⁴;
- Freshwater Pearl Mussel catchments;
- Flora Protection Order¹⁵ sites;
- Certain entries to the Water Framework Directive Register of Protected Areas¹⁶;
- Wildfowl Sanctuaries (see S.I. 192 of 1979)¹⁷;
- Tree Preservation Orders (TPOs)¹⁸;
- Ecological connectivity and networks;
- EPA Ecological Network Classes¹⁹;
- CORINE Landcover²⁰.
- Watercourses, wetlands and peatlands; and
- Other sites of high biodiversity value or ecological importance, e.g. BirdWatch Ireland's 'Important Bird Areas'.

⁸ SACs have been selected for protection under the European Council Directive on the conservation of natural habitats and of wild fauna and flora (92/43/EEC) by the DECLG due to their conservation value for habitats and species of importance in the European Union. The Habitats Directive seeks to establish Natura 2000, a network of protected areas throughout the EU. It is the responsibility of each member state to designate SACs to protect habitats and species, which, together with the SPAs designated under the 1979 Birds Directive, form Natura 2000.

⁹ SPAs have been selected for protection under the 1979 European Council Directive on the Conservation of Wild Birds (79/409/EEC) - referred to as the Birds Directive - by the DECLG due to their conservation value for birds of importance in the European Union.

¹⁰ pNHAs were published on a non-statutory basis in 1995, but have not since been statutorily proposed or designated. These sites are of significance for wildlife and habitats.

¹¹ Ramsar Sites are designated and protected under the Convention of Wetlands of International Importance, especially as Water Fowl Habitat, which was established at Ramsar in 1971 and ratified by Ireland in 1984. Ireland presently has 45 sites designated as Wetlands of International Importance, with surface areas of 66,994 hectares. The objective of a Ramsar site is the conservation of wetlands for wildfowl. While Ireland ratified the Ramsar Convention in 1984 there is no legal backing for Ramsar sites unless they are also Nature Reserves or SPAs and as such are protected by the Wildlife Acts 1976 and 2000 or the Birds or Habitats Directives. There are two Ramsar Sites located within the peninsula: Castlemaine Harbour (3IE016) and Tralee Bay (3IE015).

¹² Under the OSPAR Convention to Protect the Marine Environment of the North East Atlantic, Ireland committed to establishing marine protected areas to protect biodiversity (OSPAR MPAs). Ireland established a number of its cSACs as OSPAR MPAs for marine habitats. There are two OSPAR MPAs adjacent to the peninsula: Tralee Bay and Magharees Peninsula, West to Cloghane OSPAR MPA, and the Blasket Islands OSPAR MPA.

¹³ Salmonid waters are designated and protected as under the European Communities (Quality of Salmonid Waters) Regulations 1988 (SI No. 293 of 1988). Designated Salmonid Waters are capable of supporting salmon (*Salmo*

salar), trout (*Salmo trutta*), char (*Salvelinus*) and whitefish (*Coregonus*).

¹⁴ In order to protect existing shellfish waters and to ensure the future protection of these areas, the European Union introduced the Shellfish Waters Directive (2006/113/EC). The purpose of this Directive is to put in place concrete measures to protect waters, including shellfish waters, against pollution and to safeguard certain shellfish populations from various harmful consequences, resulting from the discharge of pollutant substances into the sea. The Directive applies to the aquatic habitat of bivalve and gastropod molluscs only (includes oysters, mussels, cockles, scallops and clams). It does not include crustaceans such as lobsters, crabs and crayfish.

¹⁵ The current list of plant species protected by Section 21 of the Wildlife Act, 1976 is set out in the Flora (Protection) Order, 1999.

¹⁶ In response to the requirements of the Water Framework Directive a number of water bodies or parts of water bodies which must have extra controls on their quality by virtue of how their waters are used by wildlife have been listed on Registers of Protected Areas (RPAs). RPAs include those for Protected Habitats or Species, Shellfish, Salmonid, Nutrient Sensitive Areas, Recreational Waters and Drinking Water.

¹⁷ Wildfowl Sanctuaries are areas that have been excluded from the 'Open Season Order' so that game birds can rest and feed undisturbed. There are 68 sanctuaries in the State. Shooting of game birds is not allowed in these sanctuaries.

¹⁸ TPOs are a planning mechanism whereby individual trees or groups of trees can be identified as important and protected by a TPO.

¹⁹ This is an EPA dataset identifying a national spread of Ecological Network Classes which have been informed by CORINE land cover data. The study developed criteria to classify the relative importance of different areas within an Ecological Network. Five Classes of areas were defined on the basis of naturalness.

²⁰ Land cover is the observed physical cover, as seen from the ground or through remote sensing, including for example natural or planted vegetation, water and human constructions which cover the earth's surface.

4.6.2 Key Ecological Sensitivities

Key ecological sensitivities comprise:

- Upland areas stretching from the Slieve Mish range to Mount Brandon - these support populations of many rare plant species such as Betony and Cornish Moneywort (endemic to the Dingle Peninsula);
- Aquatic and riverine ecology associated with the peninsula's various streams, rivers (such as Garfinny River Owenascaul, Emlagh, Feohanagh and Groin) and lakes (such as Gill, Cruite, Anascaul-Scail and Geal); and
- Coastal areas and marine waters and associated aquatic ecology.

The sensitive features – both habitats and species – identified for European designations that cover much of the Peninsula (see Section 4.6.4 below) are likely to be indicative of the key sensitive features across and surrounding Peninsula.

4.6.3 Existing Fáilte Ireland Environmental Monitoring

Fáilte Ireland regularly engages with environmental research that is used to make informed management decisions and produce robust guidelines to facilitate the protection of the environment. From its inception in 2014, the Wild Atlantic Way (WAW) Operational Programme Monitoring Programme (undertaken to date by CAAS on behalf of Fáilte Ireland guided by relevant stakeholders) has been conducting research into the impacts of tourism on the receiving environment. To date the surveys have covered 43 sites and monitored the activities and effects of over 20,000 visitors to WAW discovery points.

This research characterises visitor movements at each site while examining the ecological features and sensitivities present. A detailed assessment of the site facilities and management actions on site is also undertaken. From this data, impacts to ecological features are quantified in a systematic way and management recommendations are made. Over the first 4 years of the monitoring, the data has shown that visitors themselves cause low-level effects, and high-level effects are

predominantly caused by the mismanagement of sites. As well as the site-specific data being collected, the monitoring program collates and interprets existing national environmental indicator data compiling the results into annual macro monitoring reports. The WAW monitoring research is guided by an independent working group that steers the research and develops the program as the data is collected. This working group comprises of members from the EPA, NPWS, the Environmental Pillar and a representative from each of the County Councils along the WAW.

Each year the results are refined and published online in the form of Visitor Observation Reports, Ecological Impact Reports and the Macro Monitoring Reports. The reports are then dissected and detailed reports containing all relevant site-specific information are sent to each of the County Councils along the WAW; as well as any site management teams at sites not under the management of the County Council. This ensures that the research can be harnessed on site by those responsible while contributing towards informed management plans and guidelines created by Fáilte.

This extensive database demonstrates that over 85% of visitors observed at WAW discovery points are having low or no effects on the ecological features or processes at these sites. Ecological impacts observed comprise:

- Destruction of structures, vegetation or fauna;
- Trampling of herbaceous vegetation;
- Disturbance of wildlife;
- Heavy littering or dumping quantities of waste;
- Addition/alteration of site features, transient emissions, noise;
- Harvesting of large quantities of shells from beach sites;
- Fishing activities;
- Removal and throwing of large rocks; and
- Unrestricted dogs causing disturbances to wildlife.

It is assumed that visitor interactions within the area to which the Plan relates will be consistent with the trends, activities and effects recorded in this dataset.

The Monitoring Programme has identified that dunes, machair, maritime grasslands and upland habitats such as heathlands are the most sensitive/vulnerable to visitor effects.

Therefore, the management of visitor movements within these habitats is key for the avoidance of potential effects.

4.6.4 European Sites

A significant portion of the Peninsula, its coastline and its surrounding waters are designated as European Sites (see Section 4.6.4 below). European Sites in the area to which the Plan relates occur in the greatest concentrations along the coastline and in upland areas. European Sites comprise:

- Special Areas of Conservation²¹ (SACs), including candidate SACs; and
- Special Protection Areas²² (SPAs).

The SEA uses the same zone of influence cited in the AA; a 15 km buffer around the area to which the Plan relates (see sites within this zone listed on Table 4.1 and mapped on Figure 4.2). The AA review of all sites within this zone has allowed a determination to be made that in the absence of significant hydrological links the characteristics of the VEDP will not impose effects beyond the 15 km buffer.

There are number of SACs designated within and adjacent to the Peninsula including Mount Brandon SAC²³, Castlemaine Harbour SAC²⁴, Tralee Bay and Magharee Peninsula, West to Cloghane SAC²⁵, Blasket Islands SAC²⁶ and Slieve Mish Mountains SAC²⁷.

There are number of SPAs designated within and adjacent to the Peninsula including Dingle

Peninsula SPA²⁸, Magharee Islands SPA²⁹, Castlemaine Harbour SPA³⁰, Tralee Bay Complex SPA³¹ and Blasket Islands SPA³².

Table 4.1 European Sites within and adjacent to the area to which the Plan relates

| European Sites | | |
|----------------|--------|---|
| Designation | Code | Site Name |
| SAC | 000332 | Akeragh, Banna and Barrow Harbour |
| | 000343 | Castlemaine Harbour |
| | 000365 | Killarney National Park, Macgillycuddy's Reeks And Caragh River Catchment |
| | 000370 | Lough Yganavan And Lough Nambrackdarrig |
| | 000375 | Mount Brandon |
| | 002070 | Tralee Bay And Magharees Peninsula, West To Cloghane |
| | 002112 | Ballyseedy Wood |
| | 002165 | Lower River Shannon |
| | 002172 | Blasket Islands |
| | 002185 | Slieve Mish Mountains |
| | 002261 | Magharee Islands |
| | 002263 | Kerry Head Shoal |
| | SPA | 004008 |
| 004029 | | Castlemaine Harbour |
| 004125 | | Magharee Islands |
| 004153 | | Dingle Peninsula |
| 004154 | | Iveragh Peninsula |
| 004188 | | Tralee Bay Complex |
| 004189 | | Kerry Head |

For more detail on European Sites please refer to the AA document that accompanies the Draft Plan and this SEA Environmental Report.

²¹ SACs have been selected for protection under the European Council Directive on the conservation of natural habitats and of wild fauna and flora (92/43/EEC) due to their conservation value for habitats and species of importance in the European Union. The Habitats Directive seeks to establish Natura 2000, a network of protected areas throughout the EU. It is the responsibility of each member state to designate SACs to protect habitats and species, which, together with the SPAs designated under the 1979 Birds Directive, form Natura 2000. The European Communities (Birds and Natural Habitats) Regulations 2011 consolidate the European Communities (Natural Habitats) Regulations 1997 to 2005 and the European Communities (Birds and Natural Habitats)(Control of Recreational Activities) Regulations 2010. The Regulations have been prepared to address several judgments of the Court of Justice of the European Union (CJEU) against Ireland, notably cases C-418/04 and C-183/05, in respect of failure to transpose elements of the Birds Directive and the Habitats Directive into Irish law.

²² SPAs have been selected for protection under the 1979 European Council Directive on the Conservation of Wild Birds (79/409/EEC) - referred to as the Birds Directive - due to their conservation value for birds of importance in the EU.

²³ Sensitive features include: Vegetated sea cliffs; Oligotrophic waters; Oligotrophic to mesotrophic standing waters; Heaths; Grasslands; and Blanket bogs and Freshwater Pearl Mussel.

²⁴ Sensitive features include: Estuaries; Mudflats and sandflats; Vegetated sea cliffs; Mediterranean salt meadows; Embryonic shifting dunes; Salmon; and Otter.

²⁵ Sensitive features include: Estuaries; Mudflats and sandflats; Coastal lagoons; Reefs; Shifting dunes; Fixed coastal dunes; and Otter.

²⁶ Sensitive features include: Reefs; Vegetated sea cliffs; Heaths; Sea caves; Harbour Porpoise; and Grey Seal.

²⁷ Sensitive features include: Heaths; Calcareous rocky slopes; Killarney Fern.

²⁸ Sensitive features include: Fulmar; Peregrine; and Chough.

²⁹ Sensitive features include: Storm Petrel; Common Gull; Common Tern; and Arctic Tern.

³⁰ Sensitive features include: Red-throated Diver; Cormorant; Mallard; Oystercatcher; and Redshank.

³¹ Sensitive features include: Whooper Swan; Brent Goose; and Oystercatcher.

³² Sensitive features include: Herring Gull; Kittiwake; Arctic Tern and Razorbill.

4.6.5 Natural Heritage Areas and Proposed Natural Heritage Areas

Natural Heritage Areas (NHAs) are designated due to their national conservation value for ecological and/or geological/geomorphological heritage. They cover nationally important semi-natural and natural habitats, landforms or geomorphological features, wildlife plant and animal species or a diversity of these natural attributes. NHAs are designated under the Wildlife (Amendment) Act 2000. Proposed NHAs (pNHAs) were published on a non-statutory basis in 1995, but have not since been statutorily proposed or designated.

There are no NHAs designated within or adjacent to the Peninsula but there are number of pNHAs including those listed on Table 4.2 and mapped on Figure 4.3.

Table 4.2 pNHAs within and adjacent to the area to which the Plan relates

| Proposed Natural Heritage Areas | | |
|---------------------------------|--------|---|
| Designation | Code | Site Name |
| pNHA | 000332 | Akeragh, Banna And Barrow Harbour |
| | 000343 | Castlemaine Harbour |
| | 000365 | Killarney National Park, Macgillycuddy's Reeks And Caragh River Catchment |
| | 000370 | Lough Yganavan And Lough Nambrackdarrig |
| | 000375 | Mount Brandon |
| | 001341 | Church Hill, Tralee |
| | 001350 | Doulus Head To Cooncrome Harbour |
| | 001359 | Illaunabarnagh Island |
| | 001372 | Parkmore Point |
| | 001377 | Slea Head |
| | 001379 | Sybil Point/Carrigbrean |
| | 001384 | Ventry Dunes And Marshes |
| | 001958 | Smerwick Harbour Sandhills And Marshes |
| | 001960 | Burnham Inlet |
| | 001961 | Emlagh East Salt Marshes |
| | 001962 | Mucklaghmore Island |
| | 001963 | Gurrig Island (Magharees) |

| Proposed Natural Heritage Areas | | |
|---------------------------------|--------|--|
| | 001964 | Illauntannig (Magharees) |
| | 001965 | Inishtooskert And Illaunimmil (Magharees) |
| | 002070 | Tralee Bay And Magharees Peninsula, West To Cloghane |

4.6.6 Land Cover Mapping

CORINE³³ land cover mapping for the Peninsula is shown on Figure 4.4. The two most dominant land cover types are pastures and peat bogs.

Categories from CORINE mapping that may indicate areas likely to contain Annex I habitats, in the area to which the Plan relates, include:

- Peat bogs;
- Natural grassland;
- Water bodies;
- Coastal lagoons;
- Mixed forests;
- Coniferous forest;
- Moors and heaths;
- Intertidal flats;
- Beaches dunes sand;
- Inland marshes;
- Sparsely vegetated areas;
- Salt marshes;
- Transitional woodland and scrub; and
- Land principally occupied by agriculture with areas of natural vegetation.

4.6.7 Register of Protected Areas

In response to the requirements of the Water Framework Directive a number of water bodies or parts of water bodies that must have extra controls on their quality by virtue of how their waters are used by people and by wildlife have been listed on Registers of Protected Areas (RPAs).

The groundwater underlying the Peninsula is part of the wider groundwater area relating to drinking water sources.

There are number of rivers on the Peninsula that are included on the RPA for drinking water:

forestry, which accounts for two-thirds of the national landmass. Most of this is permanent grassland pastures. Peatlands and wetlands are the second most widespread land cover type, covering almost one-fifth of the country. While forested areas cover about one-tenth of the country. Despite rapid development in the past two decades, Ireland's landscape is predominantly rural and agricultural.

³³ The CORINE (Coordinated Information on the Environment) land cover data series was devised as a means of compiling geo-spatial environmental information in a standardised and comparable manner. CORINE has become a key data source for informing environmental and planning policy on a national and European level. The main land cover type in Ireland is agricultural land including

Feohanagh; Owenalondrig, Owenacashla; Gowlane; Finglas (Tralee Bay); Emlagh; and Shanakgal.

Tralee Bay, Inner Bay Maharees and Cromane are listed on the RPA for shellfish areas.

The number of bathing locations around the Peninsula are also included on the RPA for bathing waters: Fionntrá (Ventry); Inch; Castlegregory; and Maharabeg.

4.6.8 Other Designations

Other designations mapped on Figure 4.3 include Nature Reserves and Freshwater Pearl Mussel catchments.

Nature Reserves are areas of importance to wildlife, which is protected under Ministerial order. There are currently 78 Statutory Nature Reserves in Ireland. Most are owned by the State but some are owned by organisations or private landowners. There are four Nature Reserves designated within or adjacent to the Peninsula: Tearaght Island (to the west of the Peninsula); Mount Brandon; Derrymore Island (in the north of the Peninsula); and Tralee Bay (to the north of the Peninsula).

Freshwater Pearl Mussel is a globally threatened, long-lived and extremely sensitive species that can be impacted by many forms of pollution, particularly sediment and nutrient pollution and by hydrological and morphological changes, which may arise from developments, activities or changes in any part of the catchment. There are two Fresh Pearl Mussel catchments identified (see Figure 4.3):

- Catchments of SAC populations listed in S.I. 296 of 2009; and
- Catchments of other extant populations.

4.6.9 Existing Problems

The Department of Arts, Heritage and the Gaeltacht's Article 17 report on the Status of EU Protected Habitats and Species in Ireland (2013) identifies many Irish habitats to be of unfavourable status and many to be still declining, although it also identifies that a range of positive actions are underway. The report identifies that the majority of EU-protected species are, however, in "Favourable" status in Ireland, and stable, although a small number are considered to be in "Bad" status and

continue to require concerted efforts to protect them.

The Plan includes robust measures to contribute towards the protection of biodiversity and flora and fauna and associated ecosystem services.

Previous changes in land uses arising from human development have resulted in a loss of biodiversity and flora and fauna however, legislative objectives governing biodiversity and fauna were not identified as being conflicted with.

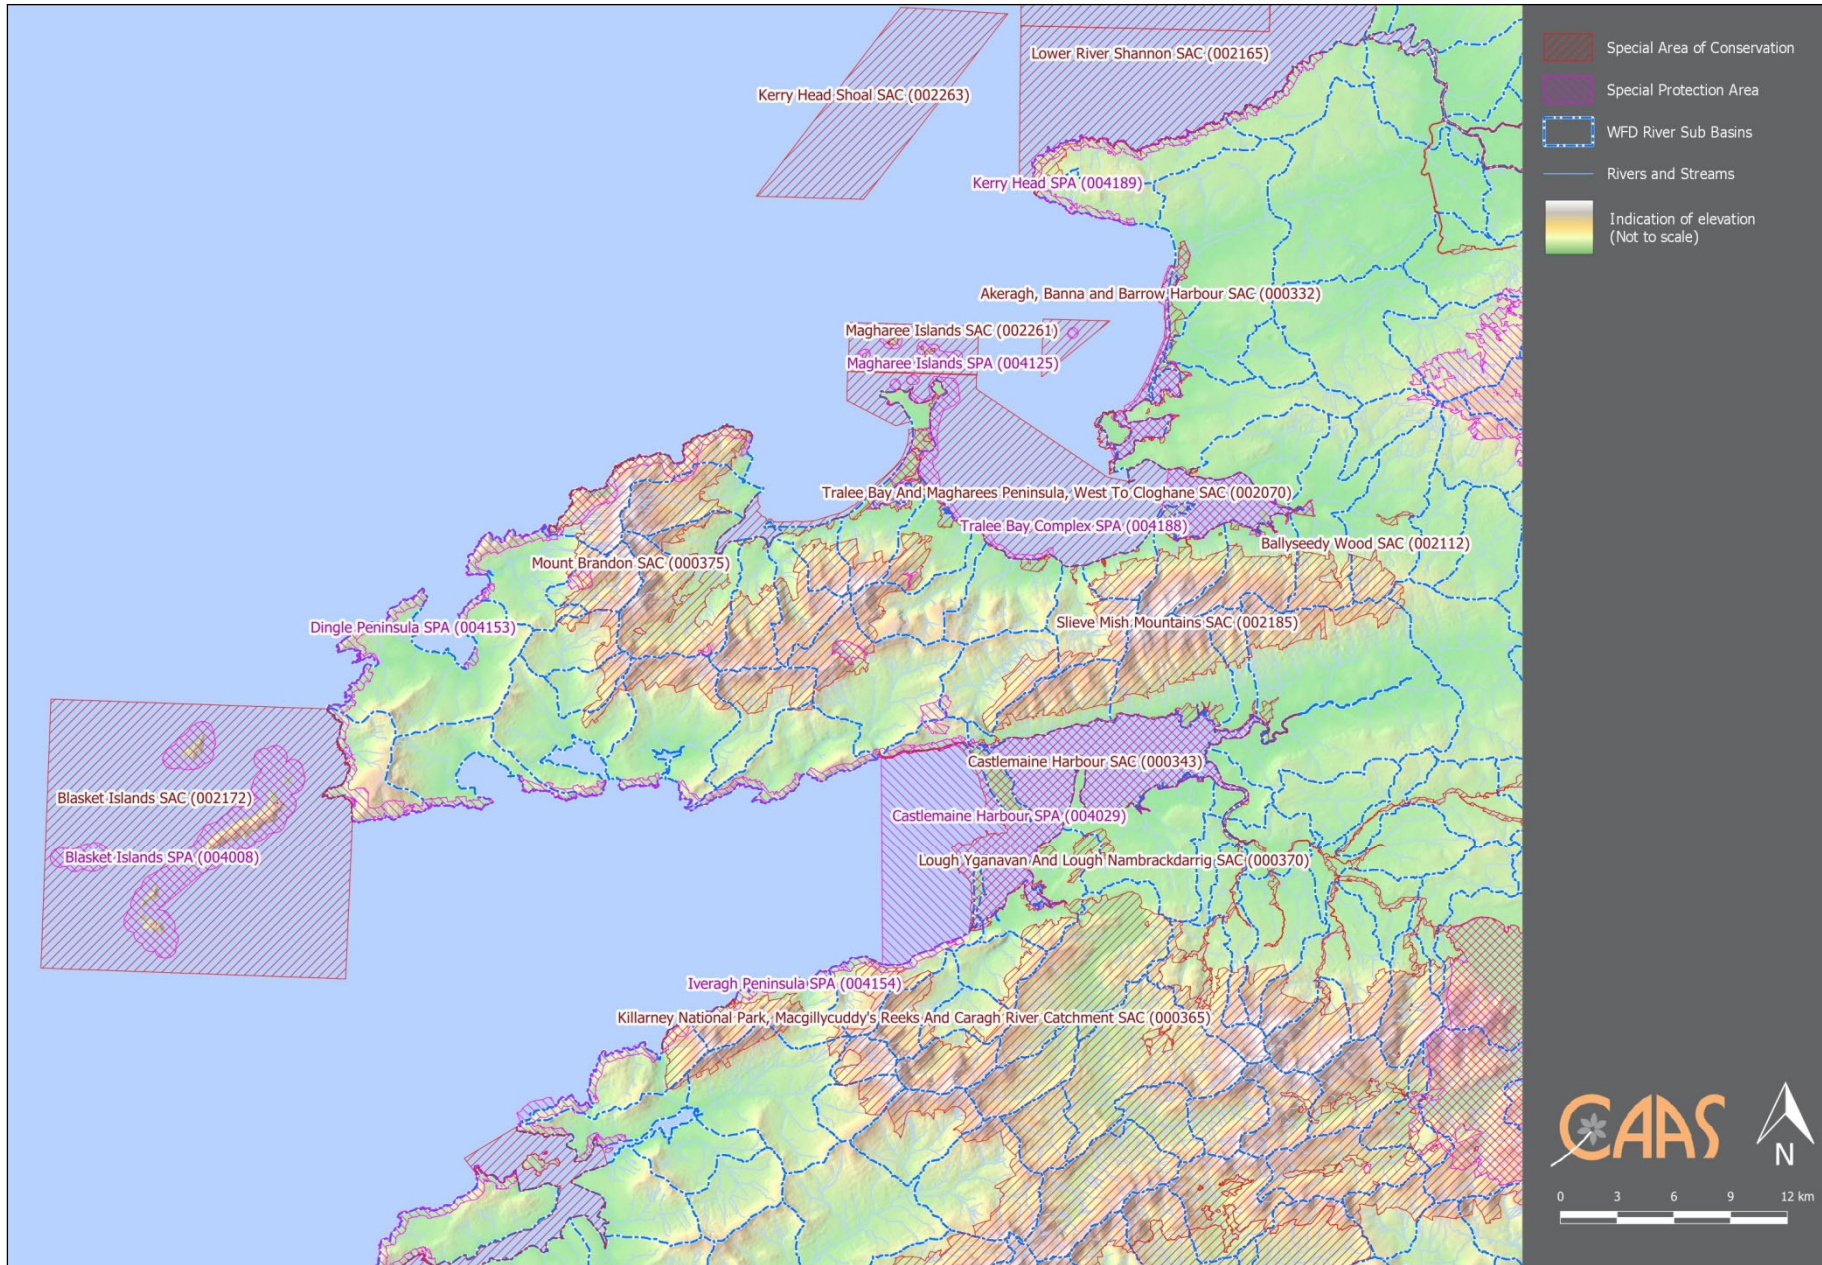

Figure 4.2 European Sites within and adjacent to the area to which the Plan relates

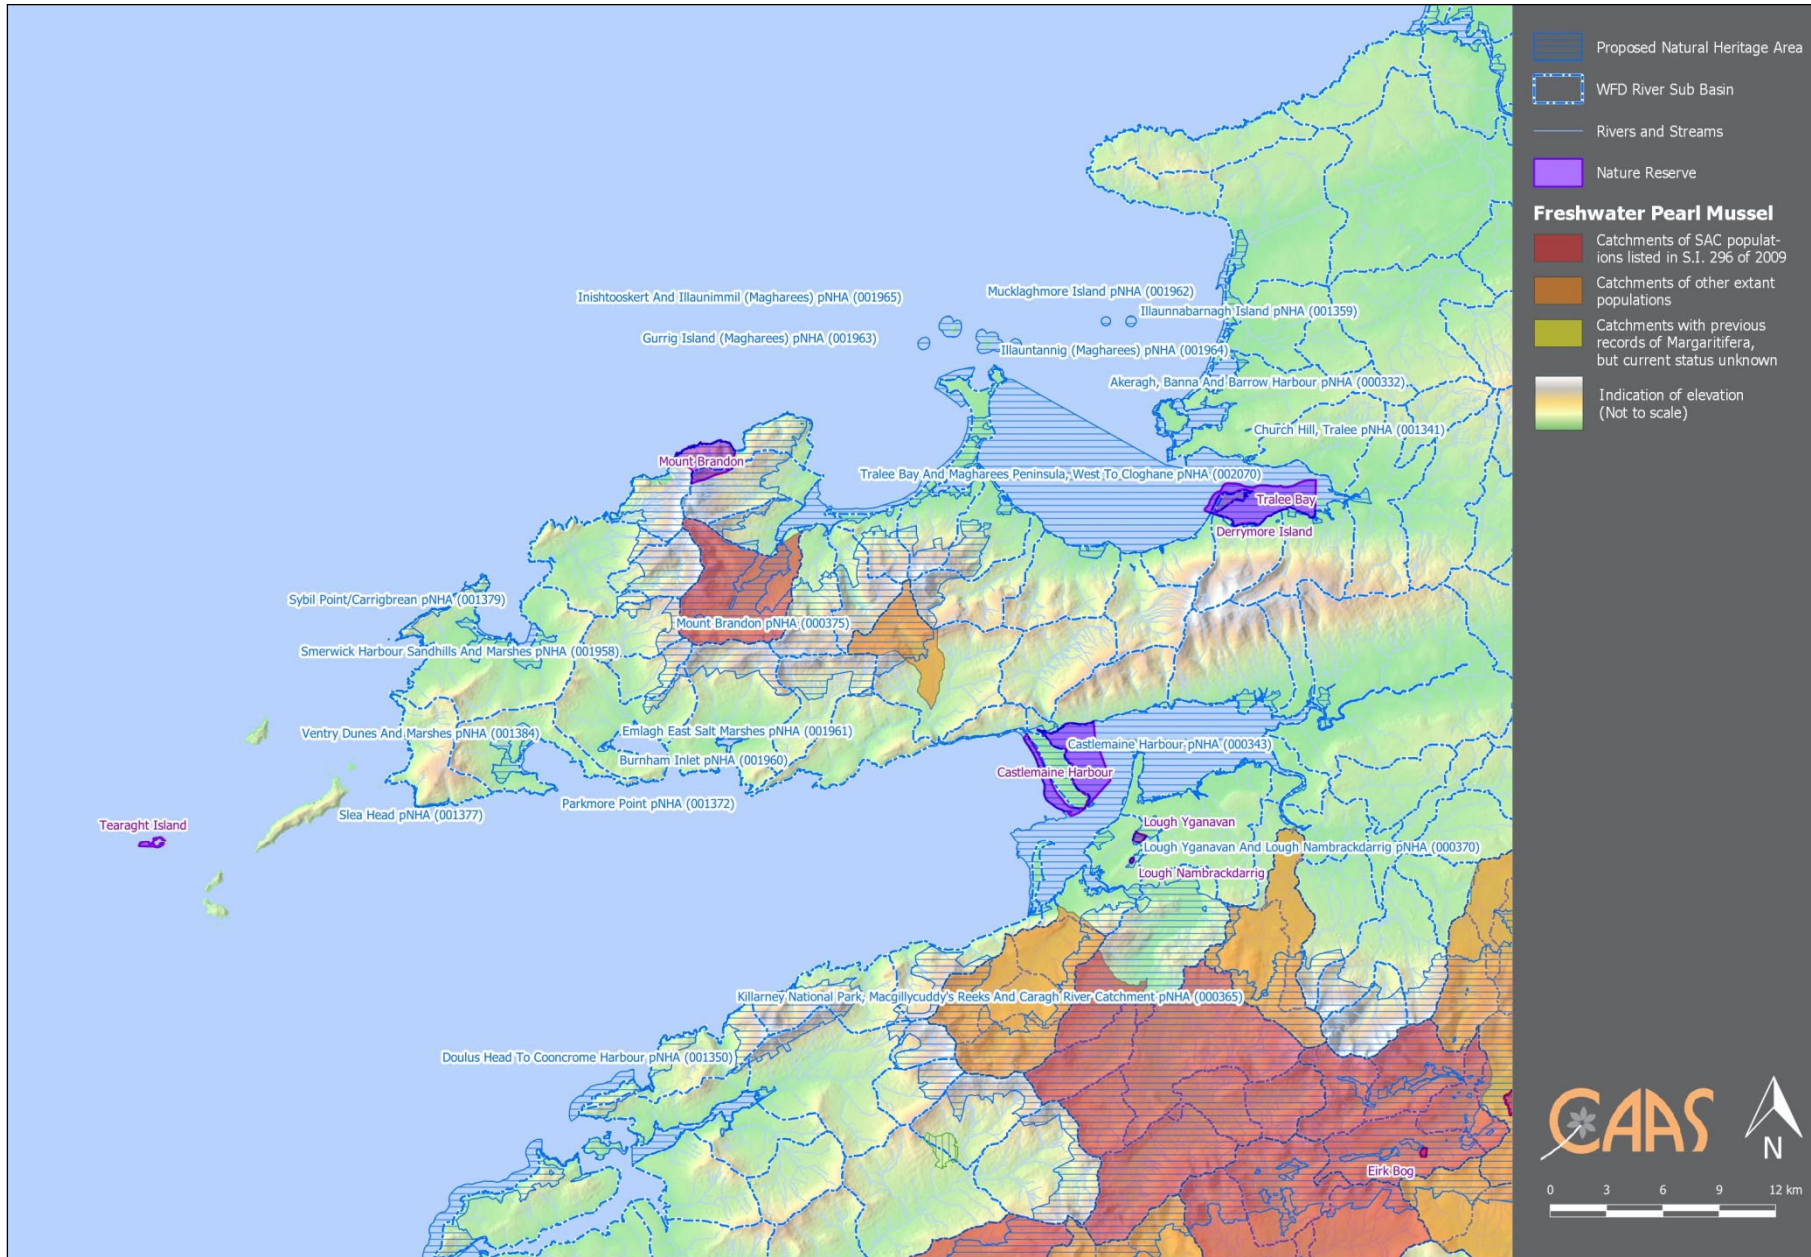

Figure 4.3 Other Ecological Designations within and adjacent to the area to which the Plan relates

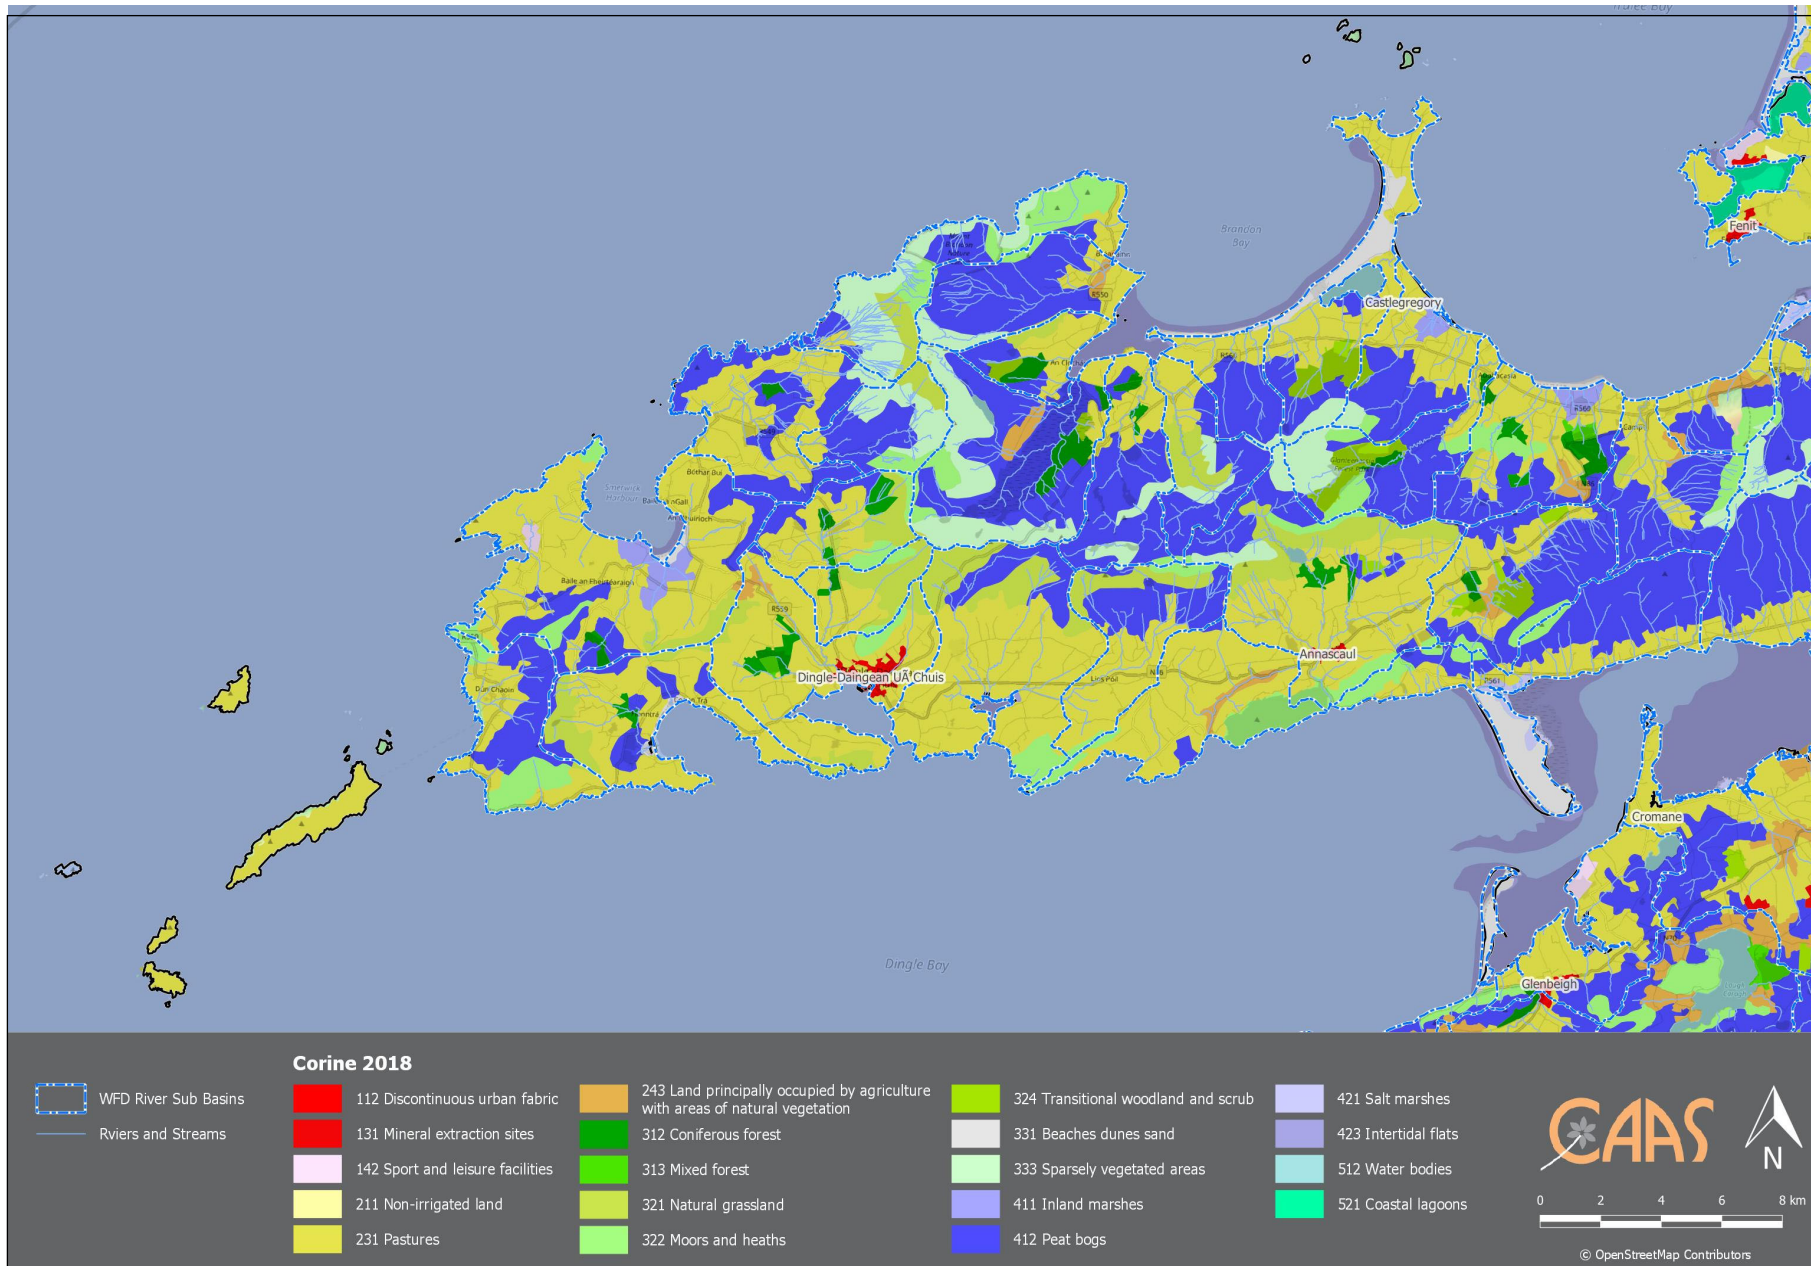

Figure 4.4 CORINE Land Cover Mapping 2018

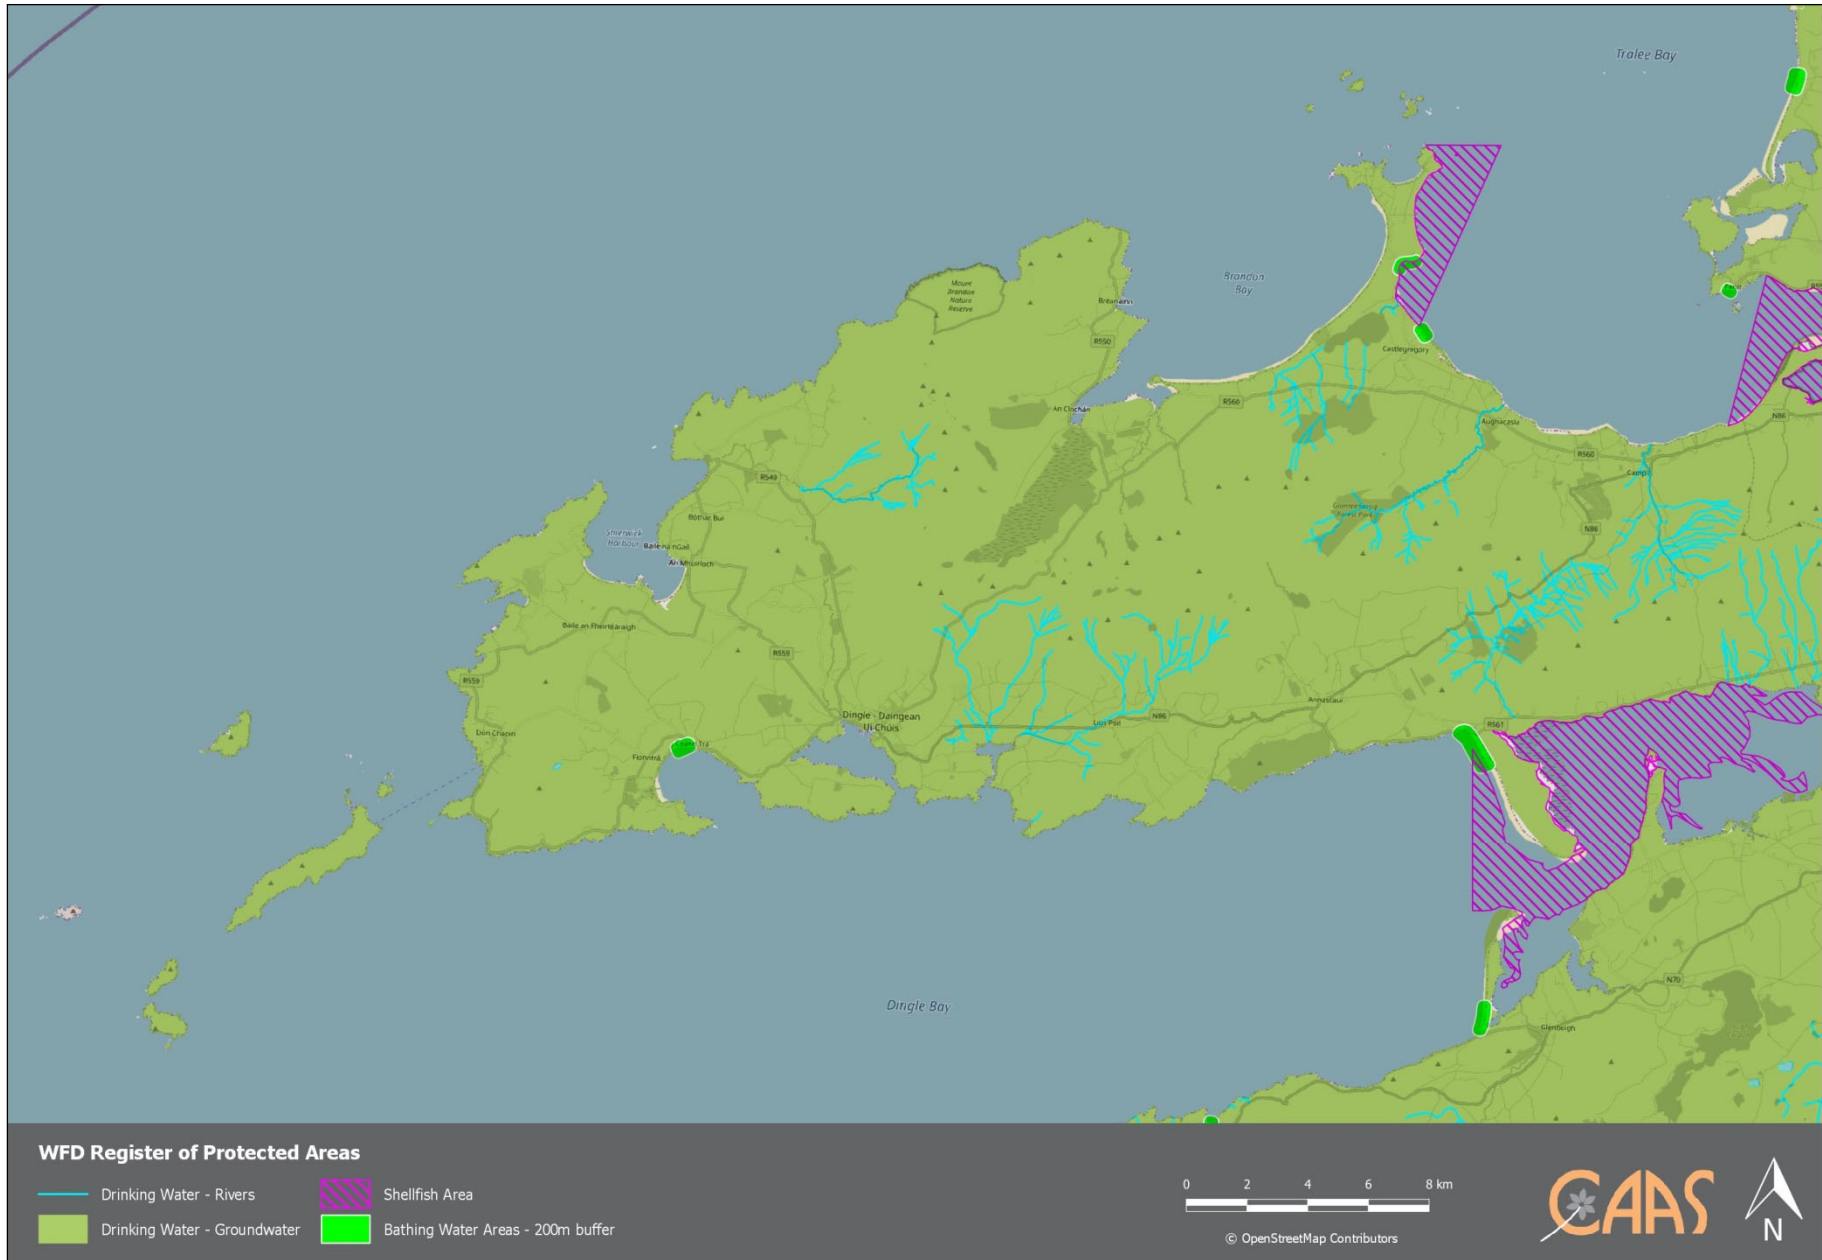

Figure 4.5 WFD Register of Protected Areas

4.7 Population and Human Health

4.7.1 Population

Using the 2016 Census data, the population of the Dingle Peninsula to which the Plan relates was estimated to be 10,350 persons³⁴ and population of Daingean Uí Chúis, the biggest settlement on the Peninsula was 2,050 persons.

Population has the potential to interact with various environmental components. Potential interactions include:

- Interactions with landslides (see Section 4.8.4);
- Recreational and development pressure on habitats and landscapes (see Section 4.6);
- Contribution towards increase in demand for waste water treatment at the municipal level (see Section 4.11);
- Contribution towards increase in demand for water supply and associated potential impact of water abstraction (see Section 4.11);
- Potential interactions in flood-sensitive area (see Section 4.9.9); and
- Potential effects on water quality (see Section 4.9).

4.7.2 Human Health

Human health has the potential to be impacted upon by environmental vectors (i.e. environmental components such as air, water or soil through which contaminants or pollutants, which have the potential to cause harm, can be transported so that they come into contact with human beings). Hazards or nuisances to human health can arise as a result of exposure to these vectors arising from incompatible adjacent land uses for example. These factors have been considered with regard to the description of: the baseline of each environmental component; and the identification and evaluation of the likely significant environmental effects of implementing the Plan.

³⁴ Total population was estimated using the interactive Census 2016 mapping tool for Small Area Population Statistics (SAPMAP) for the following Electoral Divisions: Ballinvoher, An Baile Dubh, Ballynacourty, Cé Bhréanainn, Castlegregory, An Clochán, Deelis, An Daingean, Dún

4.7.3 Existing Problems

The greatest health risk from radiation in Ireland is caused by radon. The presence of radon gas, a naturally occurring radioactive gas that originates from the decay of uranium in rocks and soils, occurs across the country. It accounts for more than half of the total radiation dose received by the Irish population. As a known carcinogen, in the same category as tobacco smoke and asbestos it is a cause of lung cancer. Exposure to radon for long periods or at high concentrations can lead to lung cancer.

The number of homes within the area to which the Plan relates with radon levels above the reference level is within the normal range experienced in other locations across the country³⁵.

Also refer to the other sections of this report referred to above with respect interactions with other environmental components.

4.8 Soil

4.8.1 Introduction

Soil is the top layer of the earth's crust. It is formed by mineral particles, organic matter, water, air and living organisms. Soil can be considered as a non-renewable natural resource because it develops over very long timescales. It is an extremely complex, variable and living medium and performs many vital functions including: food and other biomass production, storage, filtration and transformation of many substances including water, carbon, and nitrogen. Soil has a role as a habitat and gene pool, serves as a platform for human activities, landscape and heritage and acts as a provider of raw materials. Such functions of soil are worthy of protection because of their socio-economic as well as environmental importance. Soils in any area are the result of the interaction of various factors, such as parent material, climate, vegetation and human action.

To date, there is no legislation which is specific to the protection of soil resources. However,

Chaoín, Dún Urlann, Na Gleannta, Inch, Cill Maoilchéadir, Cill Chuáin, Cinn Aird, Lack, Márthain, An Mhin Aird, An Sráidbhaile, Ceann Trá, Kilgobban and Knockglass.

³⁵ Mapping available at <http://www.epa.ie/radiation/radonmap>

there is currently an EU Thematic Strategy on the protection of soil that includes a proposal for a Soil Framework Directive that proposes common principles for protecting soils across the EU.

4.8.2 Soil Types

Rain fed peat soils and brown podzols are the two most dominant soils across the Peninsula (see Figure 4.6). Much of the peat soils areas are subject to ecological designations (see Section 4.6). Other soils identified across the area to which the Plan relates include:

- Lithosols³⁶ in the upland and coastal areas;
- Brown earths³⁷ to the north-east, south and south-east of the Peninsula; and
- Alluvial soils³⁸ in the flood plains of the rivers and streams.

Outcropping rock is identified in a number of upland locations.

4.8.3 County Geological Sites

There are number of County Geological Sites across the area to which the Plan relates. These Sites do not receive statutory protection like Natural Heritage Areas but receive an effective protection from their inclusion in the planning system.

The greatest concentrations of County Geological Sites across the Peninsula occur in upland and coastal areas³⁹.

4.8.4 Landslides

The term "landslide" describes a wide variety of processes that result in the downward and outward movement of materials such as rock, debris, earth, mud and peat under the force of gravity. Issues such as existing ground conditions, slope stability and storage of

excavated material have the potential to influence susceptibility to landslides/bog bursts. The potential impacts of landslides include loss of human life/injury, flooding, pollution of watercourses and impacts upon aquatic biodiversity.

The Peninsula has several locations with a history of multiple landslide events⁴⁰. These events occur in upland areas and in areas along the Peninsula's south coast and include Kinard West (2016), Dun Chaoin (2007), Ballymacdoyle Hill (c. 2000) and Ardrinane (c. 1999). The GSI have identified various upland and coastal areas across the Peninsula that are of high and moderately high levels of landslide susceptibility.

4.8.5 Existing Problems

There have been a number of landslide events across the Peninsula and there are various areas identified by the GSI as being of elevated levels of landslide susceptibility (see Section 4.8.4).

Legislative objectives governing soil were not identified as being conflicted with.

³⁶ Lithosols are shallow non-calcareous soils, commonly overlying hard rock or skeletal and gravelly material. They tend to be stony soils, or with shattered bedrock and are associated with frequent rock outcrops.

³⁷ Brown earths are well drained mineral soils, associated with high levels of natural fertility.

³⁸ These are associated with alluvial (clay, silt or sand) river deposits.

³⁹ County Geological Sites include Blasket Island; Sleah Head; Dunbeg; Ballymore to Sleah Head; Parkmore Point; Sleah Head to Dunquin; Blasket Island; Dunquin; Commons North; Dingle Silurian Coast; Sybil Head - Smerwick Harbour; Dun an Oir Coosgorrib (Smerwick Harbour);

Trabeg Strand - Bulls Head; Minard Bay - Bull Head Annascaul; Kilmurry Bay to Minard Castle; Lough Doon; Lough Doon/ Brandon; Mount Brandon; Sauce Creek; Ballydavid Head; Kilmurry Bay to Minard Castle; Inch - Castlemaine Harbour - Rossbehy; Inch to Redcliff; Camp Valley; Caherconree and Derrymore Glen; Owencashla Valley; Brandon Bay; Maharees; and Tralee Bay.

⁴⁰ Over 2,500 landslide events are recorded in the National Landslides Database available from GSI (www.gsi.ie). This dataset also includes Landslide Susceptibility Mapping to assist in the identification of areas that are likely to experience land sliding.

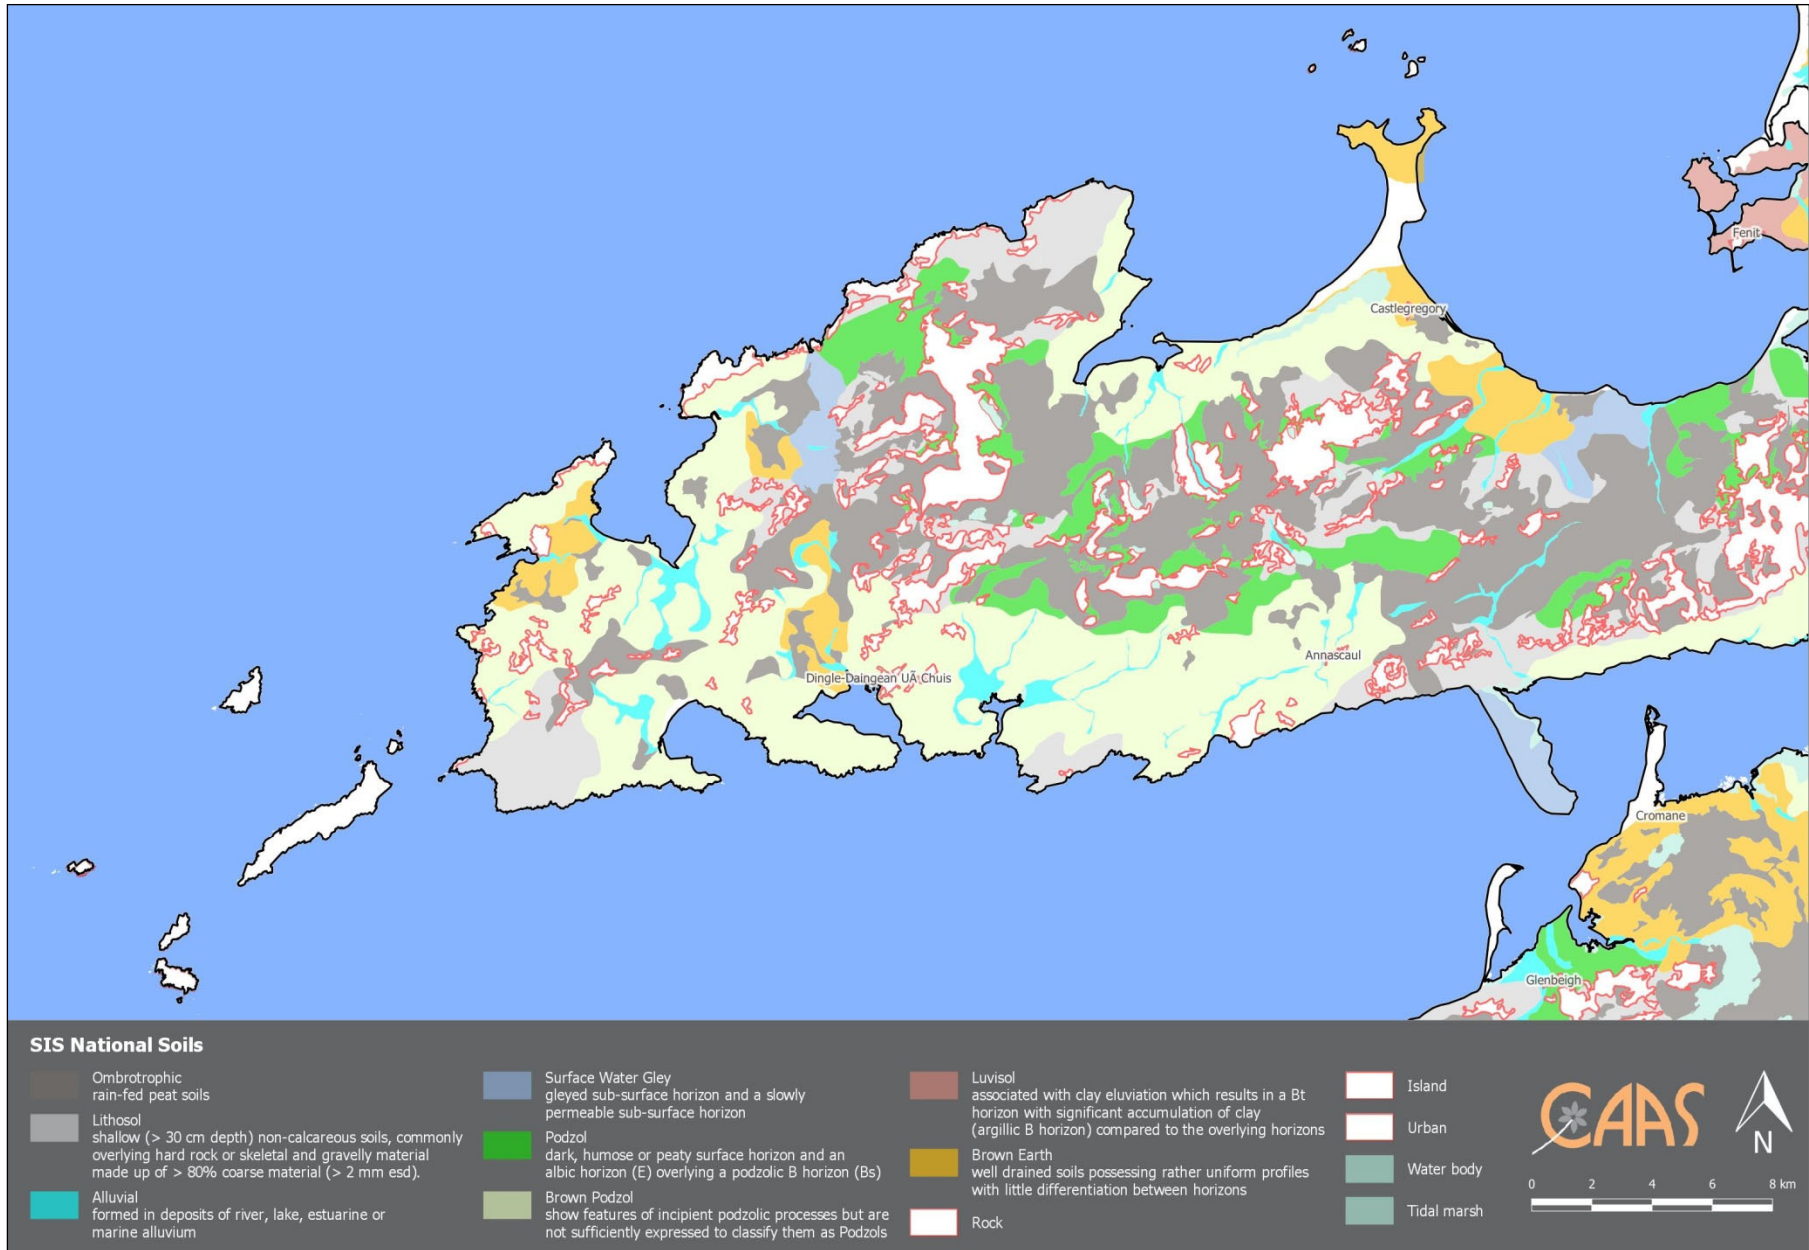

Figure 4.6 Soils

4.9 Water

4.9.1 The Water Framework Directive

Since 2000, Water Management in the EU has been directed by the Water Framework Directive 2000/60/EC (WFD). The WFD requires that all Member States implement the necessary measures to prevent deterioration of the status of all waters - surface, ground, estuarine and coastal - and protect, enhance and restore all waters with the aim of achieving *good status*. All public bodies are required to coordinate their policies and operations so as to maintain the *good status* of water bodies which are currently unpolluted and improve polluted water bodies to *good status*.

Article 4 of the WFD sets out various exemptions for deterioration in status caused as a result of certain physical modifications to water bodies. This is provided: all practicable mitigation measures are taken; there are reasons of overriding public interest or the benefits to human health, safety or sustainable development outweigh the benefits in achieving the WFD objective; there are no better alternatives; and the reasons for the physical modification are explained in the River Basin Management Plan (RBMP).

The EU's Common Implementation Strategy Guidance Documents No. 20 and 36 provide guidance on exemptions to the environmental objectives of the WFD.

For the purpose of assessment, reporting and management, water is divided into groundwater, rivers, lakes, estuarine waters and coastal waters that are in turn divided into specific, clearly defined water bodies.

4.9.2 Zone of Influence

The Zone of Influence of the Plan beyond the area to which the Plan relates, with respect to impacts upon waters can be estimated to be all

⁴¹ This catchment includes the area drained by the River Feale and all streams entering tidal water in Tralee Bay and between Clogher Head and Kilconly Point. The catchment is characterised by an inland upland area underlain by shales and sandstones with low-lying coastal area underlain by relatively pure karstified limestones and mountainous peninsular areas that are underlain by old red sandstone.

⁴² This catchment includes the area drained by the Rivers Laune and Maine and all streams entering tidal water

bodies of groundwater and all surface waters downstream areas of catchments which drain the area to which the Plan relates.

4.9.3 Surface Water Drainage

A catchment is an area of land contributing to a waterbody, with all the water ultimately running off to a single outlet. The WFD requires water quality management to be based on natural river catchments i.e. by reference to the natural, environmental unit rather than by reference to administrative or legal boundaries, which often fragment river catchments.

The main rivers in the area are the Milltown River, Feohanagh River, Garfinny River, Owenanscaul River and the Owenalondrig River.

The surface water from the area to which the Plan relates drains into two catchments: Tralee Bay-Feale⁴¹ to the north of the Peninsula; and Laune-Maine-Dingle Bay⁴² to the south.

4.9.4 Surface Water Status

The WFD defines 'overall surface water status' as the general expression of the status of a body of surface water, determined by the poorer of its ecological status and its chemical status. Thus, in order to achieve 'good surface water status' both the ecological status and the chemical status of a surface water body need to be at least 'good'.

Ecological status is an expression of the structure and functioning of aquatic ecosystems associated with surface waters. Such waters are classified as of 'good ecological status' when they meet Directive requirements.

Chemical Status is a pass/fail assignment with a failure defined by a face-value exceedance of an Environmental Quality Standards (EQS) for one or more Priority Action Substances (PAS) listed in Annex X of the Water Framework Directive (WFD). The EQS values for individual PAS substances are set at European level. Good

between Glanearagh Head and Clogher Head. In this catchment, the limestone valley is nearly completely submerged by the sea – having been preferentially eroded compared to the sandstone ridges lying either side of it and the valley is now filled by Dingle Bay while the sandstone ridges on either side form the Iveragh and Dingle Peninsulas.

surface water chemical status means that concentrations of pollutants in the water body do not exceed the environmental limit values specified in the Directive.

The WFD surface water status (2010-2015) of rivers, lakes, coastal and transitional waters, within and surrounding the area to which the Plan relates as shown on Figure 4.7.

Rivers are generally of *high* or *good* status. However the Milltown, Oweanafeanna and Glennahoo. Rivers and their tributaries are identified as being of *poor* status Owenmore River and its tributaries are identified as being of *moderate* status. Lough Gill in the north of the Peninsula is identified as being of *poor* status. In addition, there are a number of *unassigned*⁴³ rivers and lakes across the Peninsula.

To the north of the Peninsula, the status of the coastal water in Tralee Bay is identified as *moderate* (Inner Bay) and *good* (Outer Bay), and *poor* status (Lough Gill; transitional waterbody).

To the south of the Peninsula coastal waters are identified as unassigned while the transitional waters of Castlemaine Harbour are identified as being of *good* status.

4.9.5 Groundwater Status

Groundwater is stored in the void spaces in underground layers of rock, or aquifers. These aquifers are permeable, allowing both the infiltration of water from the soils above them and the yielding of water to surface and coastal waters. Groundwater is the part of the subsurface water that is in the saturated zone - the zone below the water table, the uppermost level of saturation in an aquifer at which the pressure is atmospheric, in which all pores and fissures are full of water.

For groundwater bodies, the approach to classification is different from that for surface water. For each body of groundwater, both the chemical status and the quantitative must be determined. Both have to be classed as either *good* or *poor*. The WFD sets out a series of criteria that must be met for a body to be classed as good chemical and quantitative status.

⁴³ There is a data gap relating to WFD surface water status data. Overall status is currently not assigned and the term "unassigned status" applies in respect of these waterbodies.

The WFD status (2010-2015) of all groundwater underlying the area to which the Plan relates is identified as being of *good status*, meeting the objectives of the WFD.

4.9.6 Aquifer Vulnerability and Productivity

The Geological Survey of Ireland (GSI) rates groundwaters according to both their productivity and vulnerability to pollution. The area to which the Plan relates is underlain by a poor bedrock aquifer (unproductive except for local zones).

Aquifer vulnerability refers to the ease with which pollutants of various kinds can enter into groundwater. The aquifers underlying most the area to which the Plan relates are generally classified as being of *high vulnerability* and *extreme vulnerability* and *rock at or near surface or Karst* (see Figure 4.8).

4.9.7 WFD Registers of Protected Areas

The WFD requires that Registers of Protected Areas (RPAs) are compiled for a number of water bodies or part of water bodies which must have extra controls on their quality by virtue of how their waters are used by people and by wildlife.

The WFD requires that these RPAs contain: areas from which waters are taken for public or private water supply schemes; designated shellfish production areas; bathing waters; areas which are affected by high levels of substances most commonly found in fertilizers, animal and human wastes - these areas are considered nutrient sensitive; areas designated for the protection of habitats or species e.g. Salmonid areas; Special Areas of Conservation (SACs); and, Special Protection Areas (SPAs).

Entries to the RPAs within and adjacent to the area to which the Plan relates include:

- All groundwater and surface waters sustaining areas designated as SACs and SPAs – SACs and SPAs are mapped on Figure 4.2;
- The transitional Lee Estuary at Tralee, which is designated a Nutrient Sensitive

Area (this is to the north east of the area to which the Plan relates);

- Inner Bay (Maharees), Cromane, and Tralee Bay are all identified as Shellfish Areas (these areas are mapped on Figure 4.5).
- Groundwater across the Peninsula is included on the RPA for Groundwater Drinking Water (see Figure 4.5); and
- A number of rivers are included on the RPA for Drinking Water Rivers (see Figure 4.5).

4.9.8 Bathing Waters

For bathing waters, Mandatory and Guide Values are set out for bathing waters in the 2006 EU Bathing Water Directive and transposing Regulations. Mandatory Values are values that must be observed if the bathing area is to be deemed compliant with the Directive. Compliance with Guide Values exceeds guidance with Mandatory Values and can be regarded as quality objectives which bathing sites should endeavour to achieve.

Bathing waters are now classed into four quality categories; 'Excellent', 'Good', 'Sufficient', or 'Poor' with a minimum target of 'Sufficient' required to be achieved for all bathing waters.

The most recent available data from the EPA⁴⁴ shows that all bathing waters within the Peninsula reported on are of *Excellent* water quality.

Further to this information on bathing water quality, the Blue Flag award is given to beaches and marinas that have excellent water quality and maintain other standards including effective and appropriate management to ensure the protection of the natural environment and safety standards. The Peninsula bathing locations at Inch, Ventry and Magherabeg were awarded with the Blue Flag in 2019.

4.9.9 Flooding

Certain areas across the Peninsula are at risk from coastal and fluvial flooding.

Historical flooding is documented at Murreagh, An Daingean, Lios Póil, Clóghane and Castlegregory.

Predictive flood risk mapping is available from the Office of Public Works (OPW) for rivers and coastal areas across the Peninsula, with detailed mapping available for the Castlemaine Harbour, An Daingean and Tralee areas.

Strategic Flood Risk Assessment (SFRA) as required by the 'The Planning System and Flood Risk Management Guidelines for Planning Authorities' (OPW and DEHLG, 2009) is relevant to project planning and development and associated environmental assessment and administrative consent of projects.

4.9.10 Existing Problems

Subject to exemptions provided for by Article 4 of the WFD, based on available water data, certain surface and groundwater bodies will need improvement in order to comply with the objectives of the WFD.

There is historic and predictive evidence of elevated levels of flood risk from fluvial and coastal sources at various locations across the Peninsula.

⁴⁴ EPA Report on *Bathing Water Quality in Ireland 2018*

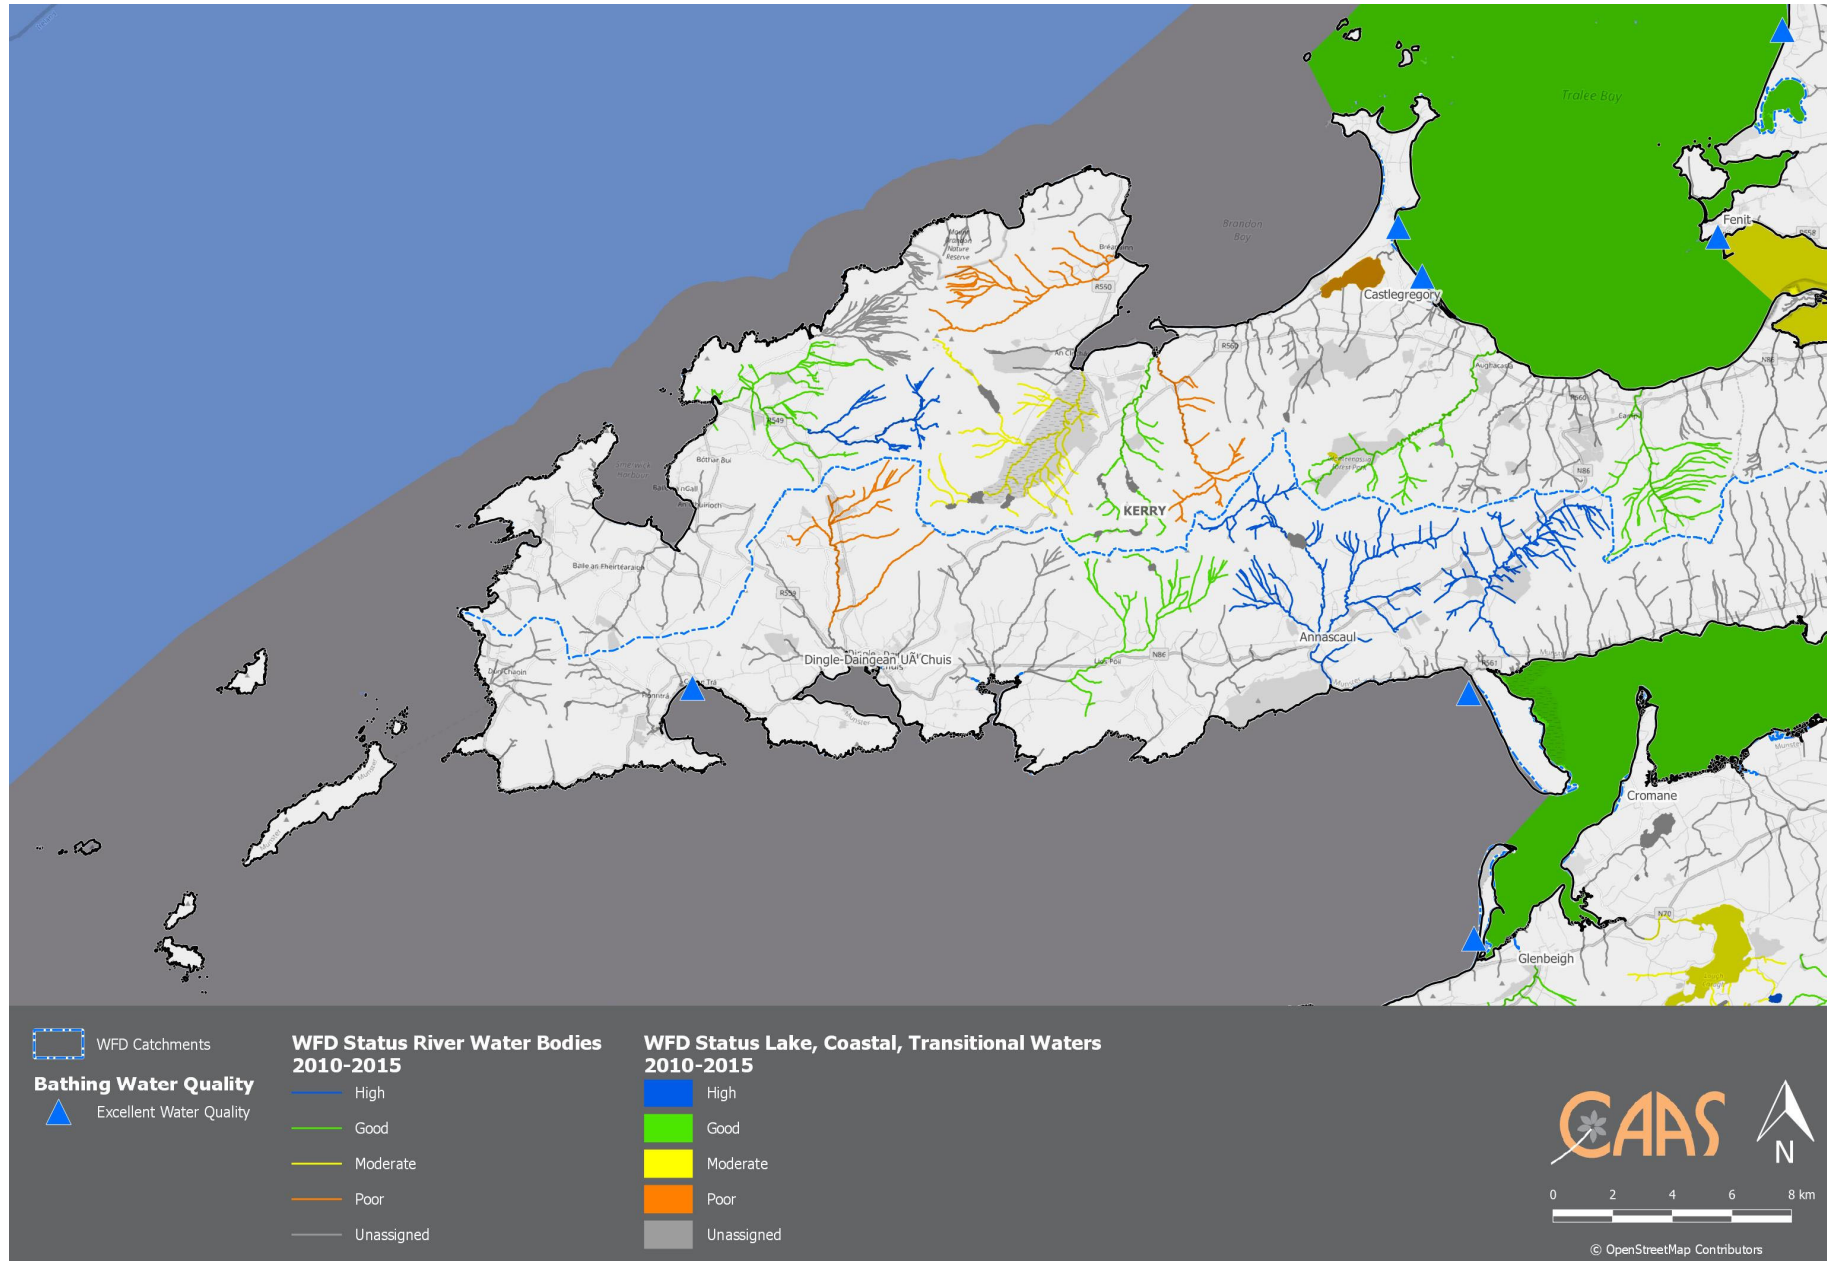

Figure 4.7 Surface Water Status (2010-2015)

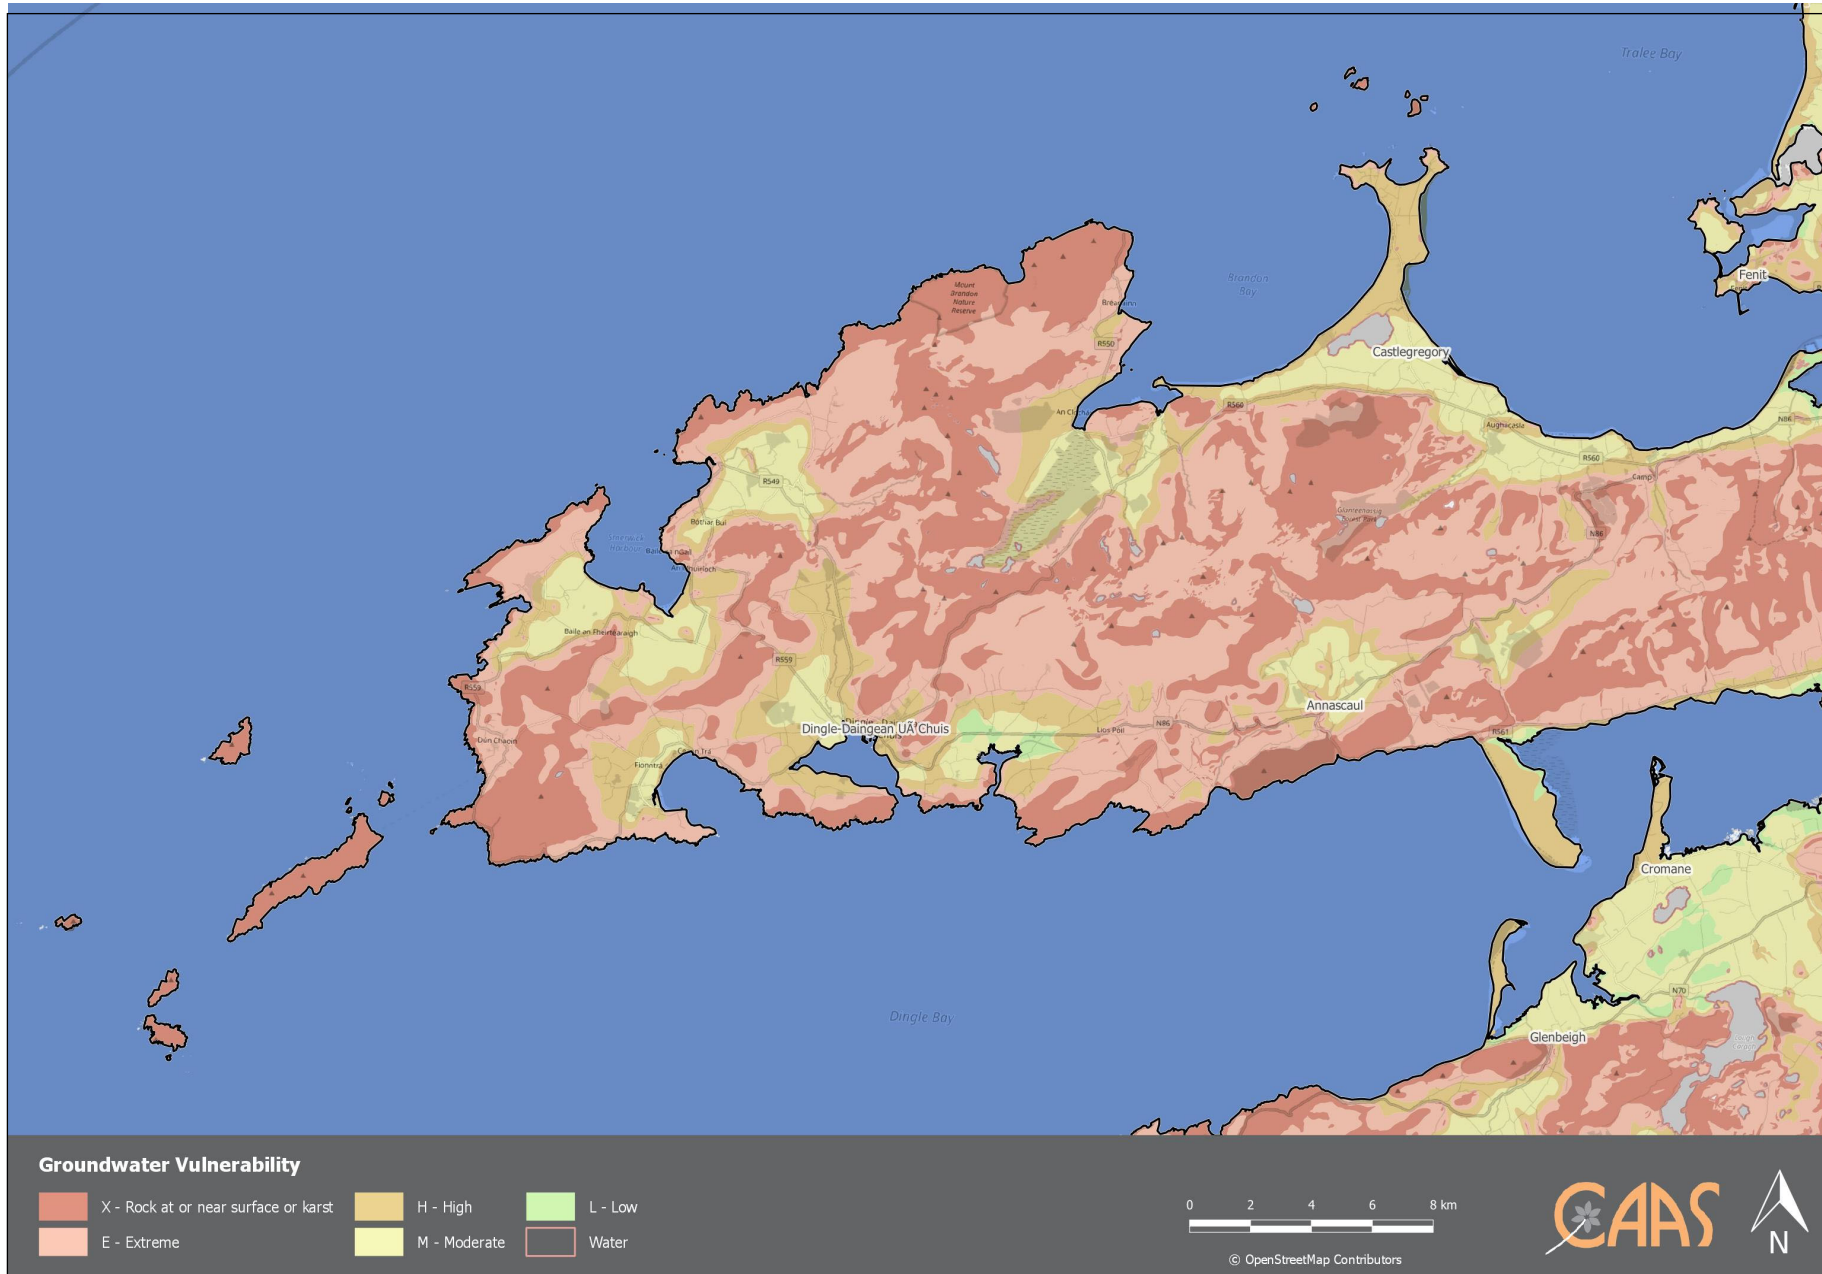

Figure 4.8 Groundwater Vulnerability

4.10 Air and Climatic Factors

4.10.1 Climatic Factors

Various provisions relating to climatic factors have been integrated into the Plan, compliance with which will need to be demonstrated by those seeking or maintaining funding from Fáilte Ireland. Such measures include those relating to (for more detail refer to Section 9):

- Walking and cycling; and
- Contribution towards European and national objectives for climate adaptation and mitigation, taking into account a wide range of detailed measures including those relating to resilience.

Interactions with climatic factors are also present with other environmental components including water/flooding (see Section 4.9).

Total emissions of greenhouse gases by humans come from various sectors including transport, agriculture, energy industries, manufacturing combustion, industrial processes, residential developments, commercial services developments, waste management processes and Fluorinated gases equipment (such as refrigeration and fire protection systems).

Ireland's Provisional Greenhouse Gas Emissions 1990-2017 (EPA, 2018) details provisional estimates of greenhouse gas emissions for the period 1990-2017. For 2017, total national greenhouse gas emissions are estimated to be 60.75 million tonnes carbon dioxide equivalent (Mt CO₂eq). This is 0.9% lower (0.53 Mt CO₂eq) than emissions in 2016.

The EPA 2018 publication *Ireland's Greenhouse Gas Emission Projections 2017-2035* provides an assessment of Ireland's progress towards achieving its emission reduction targets set down under the EU Effort Sharing Decision (Decision No 406/2009/EC) for the years 2013-2020 and a longer-term assessment based on current projections. Ireland's 2020 target is to achieve a 20% reduction of non-Emission Trading Scheme (non-ETS) sector emissions (i.e. agriculture, transport, the built environment, waste and non-energy intensive industry) on 2005 levels with annual limits set

for each year over the period 2013-2020. Key Insights identified as part of the report's package of documents are that:

- Latest EPA greenhouse gas emissions projections indicate an overall increase in greenhouse gas emissions from most sectors. The projected growth in emissions is largely underpinned by projected strong economic growth and relatively low fuel prices leading to increasing energy demand over the period.
- The positive impact on emissions of existing and planned policies and measures is tempered by the strong economic outlook and associated increase in energy demand.
- Ireland is not projected to meet 2020 emissions reduction targets and is not on the right trajectory to meet longer term EU and national emission reduction commitments.
- Fossil fuels such as coal and peat continue to be key contributors to emissions from the power generation sector and the extent of their use will be a key determinant in influencing future emissions trends from this sector.
- A strong growth in emissions projections from the transport sector is attributed to a rise in fuel consumption particularly for diesel cars and diesel freight up to 2025. A projected accelerated deployment of electric vehicles between 2025 and 2030 does however result in a projected decline in emissions during this period.
- Agriculture emissions are projected to continue to grow steadily over the period. This is based on an updated outlook that sees an increase in animal numbers particularly for the dairy herd.
- The gap between the two scenarios – With Existing Measures and With Additional Measures – is narrowing over the period to 2020 indicating that mitigation options in the short-term are largely established.
- These projections do not consider the impact of policies and measures that form part of the recently announced National Development Plan or the full impact of policies and measures included in the National Mitigation Plan. It is anticipated that additional impact will be provided to the EPA by relevant Government Departments and

Agencies and included in the 2019 Emission Projections.

Ireland's National Policy position is to reduce CO₂ emissions in 2050 by 80% on 1990 levels across the Energy Generation, Built Environment and Transport sectors, with a goal of Climate neutrality in the Agriculture and Land-Use sector. The 2016 emissions for all of these sectors are rising, making achievement of long-term goals more difficult.

The Government's 2019 Climate Action Plan reflects the central priority that climate change will have in Ireland's political and administrative systems into the future, setting out governance arrangements including the carbon-proofing of government policies, the establishment of carbon budgets, the strengthening of the Climate Change Advisory Council and providing greater accountability to the Oireachtas.

The National Mitigation Plan (Department of Communications, Climate Action and Environment, 2017), represents an initial step to set Ireland on a pathway to achieve the level of decarbonisation required. It is a whole-of-Government Plan, reflecting in particular the central roles of the key Ministers responsible for the sectors covered by the Plan – Electricity Generation, the Built Environment, Transport and Agriculture, as well as drawing on the perspectives and responsibilities of a range of other Government Departments.

The National Adaptation Framework (Department of Communications, Climate Action and Environment, 2018), sets out the national strategy to reduce the vulnerability of the country to the negative effects of climate change and to avail of positive impacts. The National Adaptation Framework outlines a whole of government and society approach to climate adaptation. Under the Framework, a number of Government Departments will be required to prepare sectoral adaptation plans in relation to a priority area that they are responsible for.

The use of alternative fuels, including electricity, forms a significant part of government policy to reduce emissions, including from transport. Greater use of alternative fuels, including renewable energy, has the potential to further contribute towards energy security.

4.10.2 Ambient Air Quality

In order to protect human health, vegetation and ecosystems, EU Directives set down air quality standards in Ireland and the other Member States for a wide variety of pollutants. These pollutants are generated through fuel combustion, in space heating, traffic, electricity generation and industry and, in sufficient amounts, could affect the well-being of the areas inhabitants. The EU Directives include details regarding how ambient air quality should be monitored, assessed and managed.

The principles to this European approach are set out in the Ambient Air Quality and Cleaner Air for Europe (CAFE) Directive (2008/50/EC) (which replaces the earlier Air Quality Framework Directive 1996 and the first, second and third *Daughter Directives*; the fourth *Daughter Directive* will be included in CAFE at a later stage).

In order to comply with the directives mentioned above, the EPA measures the levels of a number of atmospheric pollutants. For the purposes of monitoring in Ireland, four zones are defined in the Air Quality Standards Regulations 2002 (SI No. 271 of 2002).

The EPA's (2018) *Air Quality in Ireland 2017* identifies that:

- No levels above the EU limit value were recorded at any of the ambient air quality network monitoring sites in Ireland in 2017;
- The tighter World Health Organisation (WHO) guideline values were exceeded at a number of monitoring sites for particulate matter (PM₁₀ and PM_{2.5}), ozone and NO₂; and
- 2017 dioxin survey shows that concentrations of dioxins and similar pollutants remain at a consistently low level in the Irish environment.

In order to apply with European Directives relating to air quality, the EPA manages the National Ambient Air Quality Network and measures the levels of a number of atmospheric pollutants at locations across the country. The current⁴⁵ air quality in the Rural West Air Quality Region is identified by the EPA as being *good*.

⁴⁵ 13/06/2019 (<http://www.epa.ie/air/quality/>)

4.10.3 Noise

Noise is unwanted sound. The Noise Directive - Directive 2002/49/EC relating to the assessment and management of environmental noise - is part of an EU strategy setting out to reduce the number of people affected by noise in the longer term and to provide a framework for developing existing EU policy on noise reduction from source. The Directive requires competent authorities in Member States to:

- Draw up *strategic noise maps* for major roads, railways, airports and agglomerations, using harmonised noise indicators and use these maps to assess the number of people which may be impacted upon as a result of excessive noise levels;
- Draw up action plans to reduce noise where necessary and maintain environmental noise quality where it is good; and,
- Inform and consult the public about noise exposure, its effects, and the measures considered to address noise.

In compliance with the Directive and transposing Environmental Noise Regulations (SI No. 140 of 2006), Noise Action Plans have been prepared for each local authority area within the country. These action plans address the agglomeration of Dublin and major roads, railways and airports. The Action Plans include noise mapping and are required to include measures to manage noise issues and effects, including noise reduction if necessary.

4.10.4 Existing Problems

The Climate Change Advisory Council's Annual Review 2018 has identified that Ireland will miss 2020 and 2030 emissions reduction targets unless urgent action that leads to tangible and substantial reductions in greenhouse gas emissions is taken. The Plan will, in combination with various plans and programmes, contribute towards reducing/limiting increases in greenhouse gas emissions and moving in the direction of these targets.

4.11 Material Assets

4.11.1 Water Services

4.11.1.1 Waste Water

The EPA's 2018 report '*Urban Waste Water Treatment in 2017*' identified that:

- Waste water treatment at 28 of Ireland's 179 large urban areas did not meet relevant standards and improvements are needed at 148 urban areas;
- Raw sewage is released into the environment from 38 urban areas; and
- Significant capital investment to upgrade deficient waste water treatment systems is required to comply with EU standards, improve water quality, and prevent pollution of rivers, lakes and bathing water and to protect shellfish and pearl mussel habitats.

Based on the EPA's assessment of monitoring information provided by Irish Water and the enforcement activities carried out by the EPA, this report identifies urban areas with the most important environmental issues that must be addressed.

Waste Water Treatment Plants serving the area to which the Plan relates are not currently listed as priority areas, where improvements are required to resolve urgent environmental issues.

There are four urban areas in County Kerry listed currently as priority areas (Abbeydorney, Castleisland, Kilgarvan and Tralee), where improvements are required to resolve urgent environmental issues.

Settlements and rural areas across the Peninsula are served by a combined sewer network, including septic tanks and sewerage treatment schemes serving agglomerations under 500 P.E. (including Cloghane, Feohanagh, Murreagh, Ballyferriter, Ventry, Cloghane and Anascaul).

The most recent EPA's report on Waste Water Discharge Licence Audit for Dingle Waste Water Treatment Plant (Licence No. D0185-01) shows that facility's operation and environmental

performance are satisfactory and in compliance with the discharge licence limit values⁴⁶.

Since 2015, Irish Water, working in partnership with Kerry County Council, has upgraded the waste water treatment plants in Ballylongford, Tarbert, Kilgarvan and Ardfert. Significant improvements have also been made at Dingle, Cahersiveen, Killarney and Tralee, with further improvements also planned for Tralee and Kenmare. Capacity improvements will help to support new development in these areas, including tourism related development.

4.11.1.2 Water Supply

Drinking water supply in the area to which the Plan relates is provided by domestic water wells and private/public water supply schemes (including the Dingle Public Water Supply).

Under Section 58 of the Environmental Protection Agency Act 1992, the EPA is required to collect and verify monitoring results for all water supplies in Ireland covered by the European Communities (Drinking Water) Regulations, 2000. The EPA publishes their results in annual reports that are supported by Remedial Action Lists (RALs). The RAL identifies water supplies that are not in compliance with the Regulations mentioned above.

The most recent EPA Remedial Action List (Q2 of 2019) does not list the Dingle Public Water Supply as being in need of improvement.

4.11.2 Public Assets and Infrastructure

Settlements across the Peninsula include Dingle Town, Stradbally, Inch, Murreagh, Ballydavid, Ventry and Castlegregory. Dingle is the largest settlement on the Peninsula and is designated a District Centre by the Kerry County Development Plan (district centres are large settlements that provide a range of services to the towns, villages and rural areas in their catchments).

Dingle Peninsula is served by rail, bus and regional and strategic roads, linking the Peninsula with Tralee-Killarney Hub. The Peninsula is also served by the Port at Dingle Town and Kerry International Airport (KIA) at Farranfore. The port and harbour have many

functions including fishing, marine leisure and tourism.

Public assets and infrastructure that have the potential to be impacted upon by the development of tourism related infrastructure, if unmitigated, include resources such as public open spaces, parks and recreational areas; public buildings and services; utility infrastructure (electricity, gas, telecommunications, water supply, waste water infrastructure etc.). These resources are generally located within the immediate outskirts of urban/suburban areas.

Various provisions relating to material assets have been integrated into the Plan, compliance with which will need to be demonstrated by those seeking or maintaining funding from Fáilte Ireland. Such measures include those relating to Critical Infrastructure and the Mitigation of Traffic (for more detail refer to Section 9).

4.11.3 Waste Management

Waste management across the Peninsula is guided by the Southern Region Waste Management Plan 2015-2021. The Southern Waste Region comprises the 10 local authority areas of Carlow, Clare, Cork County, Cork City, Limerick City and County, Kerry, Kilkenny, Tipperary, Waterford City and County and Wexford. The Plan provides a framework for the prevention and management of waste in a sustainable manner.

4.11.4 Existing Problems

The provisions of the Plan will contribute towards protection of the environment with regard to impacts arising from material assets.

The provisions of infrastructure and supporting services for development, particularly water and waste water services, is critical.

2018 saw long dry spells, which Met Éireann compared to 1976 when similar drought conditions were experienced across the country. The prolonged hot weather during the summer caused a huge increase in water usage across the country. As demand for water rose to critical levels, Irish Water's supplies were put under severe stress as more water was being

⁴⁶EPA (2018) *Waste Water Discharge License Audit Report* (http://www.epa.ie/licences/lic_eDMS/090151b2806c9934.pdf)

used than could be produced. Public Water Supply Schemes on the Dingle Peninsula were also under pressure during this extended period of dry weather. As a result, measures were taken to reduce consumption to help replenishing water supplies and to minimise the impact on communities and businesses in County Kerry⁴⁷.

Irish Water is currently preparing a National Water Resources Plan (NWRP) to address issues with the supply and demand for drinking water in Ireland over the short, medium and long term. Measures have been integrated into the VEDP that will ensure that those receiving funding from Fáilte Ireland will not direct additional tourists towards specific locations in instances where significant problems with critical infrastructure have been identified (for more detail refer to Section 9).

4.12 Cultural Heritage

4.12.1 Archaeological Heritage

Archaeology is the study of past societies through the material remains left by those societies and the evidence of their environment. Archaeological sites and monuments vary greatly in form and date; examples include earthworks of different types and periods, (e.g. early historic ringforts and prehistoric burial mounds), megalithic tombs from the Prehistoric period, medieval buildings, urban archaeological deposits and underwater features.

The European Convention on Protection of the Archaeological Heritage known as the Valletta Convention of 1992. This was ratified by Ireland in 1997 and requires that appropriate consideration be given to archaeological issues at all stages of the planning and development process.

Archaeological heritage is protected under the National Monuments Acts (1930-2004), Natural Cultural Institutions Act 1997 and the Planning Acts.

The Record of Monuments and Places (RMP) is an inventory, put on a statutory basis by amendment to the National Monuments Act 1994, of sites and areas of archaeological

significance, numbered and mapped. It is available from the National Monuments Service and at archaeology.ie.

The term 'monument' includes all man-made structures of whatever form or date except buildings habitually used for ecclesiastical purposes. All monuments in existence before 1700 A.D. are automatically considered to be historic monuments within the meaning of the Acts. Monuments of architectural and historical interest also come within the scope of the Acts. Monuments include: any artificial or partly artificial building, structure or erection or group of such buildings, structures or erections; any cave, stone or other natural product, whether or not forming part of the ground, that has been artificially carved, sculptured or worked upon or which (where it does not form part of the place where it is) appears to have been purposely put or arranged in position; any, or any part of any, prehistoric or ancient tomb, grave or burial deposit, or, ritual, industrial or habitation site; and any place comprising the remains or traces of any such building, structure or erection, any such cave, stone or natural product or any such tomb, grave, burial deposit or ritual, industrial or habitation site, situated on land or in the territorial waters of the State', but excludes 'any building or part of any building, that is habitually used for ecclesiastical purposes' (National Monuments Acts 1930-2004).

A recorded monument is a monument included in the list and marked on the map, which comprises the RMP set out county by county under Section 12 of the National Monuments (Amendment) Act, 1994 by the Archaeological Survey of Ireland. The definition includes Zones of Archaeological Potential in towns and all other monuments of archaeological interest, which have so far been identified.

The archaeology of the Dingle Peninsula includes 44 National Monuments of which 36 are in state ownership, 2 are in state guardianship and 6 are subject to preservation orders⁴⁸. These monuments are mapped on Figure 4.9.

The archaeology of the Peninsula is dominated by early ecclesiastical sites and secular sites of the Early Medieval Period, such as clocháns and ringforts. Particularly high densities of Recorded Monuments occur in the townlands of Fahan,

⁴⁷ Information from Irish Water's website www.water.ie

⁴⁸ *Kerry County Development Plan 2015-2021, Chapter 11: Built and Cultural Heritage*

Glanfahan, Coumeenoole North and Coumeenoole South.

The Loch a'Dúin Valley near Cloghane contains the most remarkable series of monuments from the Bronze Age. The Dingle Peninsula has the largest collection of Ogham stones in the country, the earliest form of Irish writing, used as landmarks, or linked in with land ownership. One of the finest ogham stones is located in Dun Chaoin, overlooking the Blasket Islands, on the summit of Dún Mór.

There are number of monastic sites across the Peninsula with a variety of remains such as oratories, cross slabs, holy wells, beehive huts, shrines, burials, sun dials, and enclosing features. Some have been excavated, such as Reasc, near Ballyferriter; others, like Oileáin tSeanaigh off the coast of Castlegregory, remain practically untouched since they were deserted in the 12th century.

The UNESCO World Heritage Site of Sceilg Mhichíl is an example of an early religious settlement deliberately sited on a pyramidal rock in the ocean. Sceilg Mhichíl is also designated a National Monument in State ownership.

The Underwater Archaeology Unit was established within the National Monuments Service to manage and protect Ireland's underwater cultural heritage, including the quantification of the underwater resource and assessing development impacts in order to manage and protect this aspect of Ireland's heritage. The Shipwreck Inventory is principally a desktop survey with information gathered from a broad range of cartographic, archaeological and historical sources, both documentary and pictorial. An inventory of wrecks covering the coastal waters off County Dublin was published in 2008. Wrecks over 100 years old and archaeological objects found underwater are protected under the National Monuments (Amendment) Acts 1987 and 1994. Significant wrecks less than 100 years old can be designated by Underwater Heritage Order on account of their historical, archaeological or artistic importance. Such Orders can also be used to designate areas of seabed or land covered by water to more clearly define and

protect wreck sites and archaeological objects. Under the legislation all diving on known protected wreck sites or with the intention of searching for underwater cultural heritage is subject to licensing requirements.

There are a number of historically recorded shipwrecking events located in vicinity of the Dingle Peninsula.

Therefore, coastal waters, tidal estuaries and rivers within and surrounding the area to which the Plan relates, may contain many features and finds associated with maritime/riverine heritage such as shipwrecks, piers, quay walls, fords, stepping stones and associated archaeological objects and features.

4.12.2 Architectural Heritage

The term architectural heritage is defined in the Architectural Heritage (National Inventory) and Historic Monuments Act 1999 as meaning all: structures and buildings together with their settings and attendant grounds, fixtures and fittings; groups of structures and buildings; and, sites which are of technical, historical, archaeological, artistic, cultural, scientific, social, or technical interest.

Records of Protected Structures are legislated for under Section 12 and Section 51 of the Planning and Development Act 2000 as amended. Protected structures are defined in the Planning and Development Act 2000 as amended as structures, or parts of structures that are of special interest from an architectural, historical, archaeological, artistic, cultural, scientific, social or technical point of view.

In relation to a protected structure or proposed protected structure, the following are encompassed:

- The interior of the structure;
- The land lying within the curtilage⁴⁹ of the structure;
- Any other structures lying within that curtilage and their interiors; and,

even buildings now in separate ownership, e.g. the lodge of a former country house, or the garden features located in land subsequently sold off. Such lands are described as being attendant grounds, and the protection extends to them just as if they were still within the curtilage of the Protected Structure.

⁴⁹ Curtilage is normally taken to be the parcel of ground immediately associated with the Protected Structure, or in use for the purposes of the structure. Protection extends to the buildings and land lying within the curtilage. While the curtilage sometimes coincides with the present property boundary, it can originally have included lands, features or

- All fixtures and features that form part of the interior or exterior of any structure or structures referred to in subparagraph (i) or (iii).

Protected structures designated across the Peninsula are mapped on Figure 4.9. Clusters of these are concentrated within already developed villages, urban and suburban areas such as district town of Daingean Uí Chúis or smaller settlements of Annascaul, Baile an Fheirtéaraigh and Ceann Trá.

In addition to Protected Structures, the Planning and Development Act, 2000 provides the legislative basis for the protection of Architectural Conservation Areas (ACAs). An ACA is a place, area or group of structures or townscape that is of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest or value, or contributes to the appreciation of protected structures, whose character it is an objective to preserve in a development plan. The ACA designation requires that planning permission must be obtained before significant works can be carried out to the exterior of a structure in the ACA that might alter the character of the structure or the ACA.

There are three ACAs designated on the Peninsula, one at Dingle, covering non-contiguous parts of the town centre and two in the rural townlands in Ardamore and Kildurrihy.

4.12.3 Existing Problems

The context of archaeological and architectural heritage has changed over time however no existing conflicts with legislative objectives governing archaeological and architectural heritage have been identified.

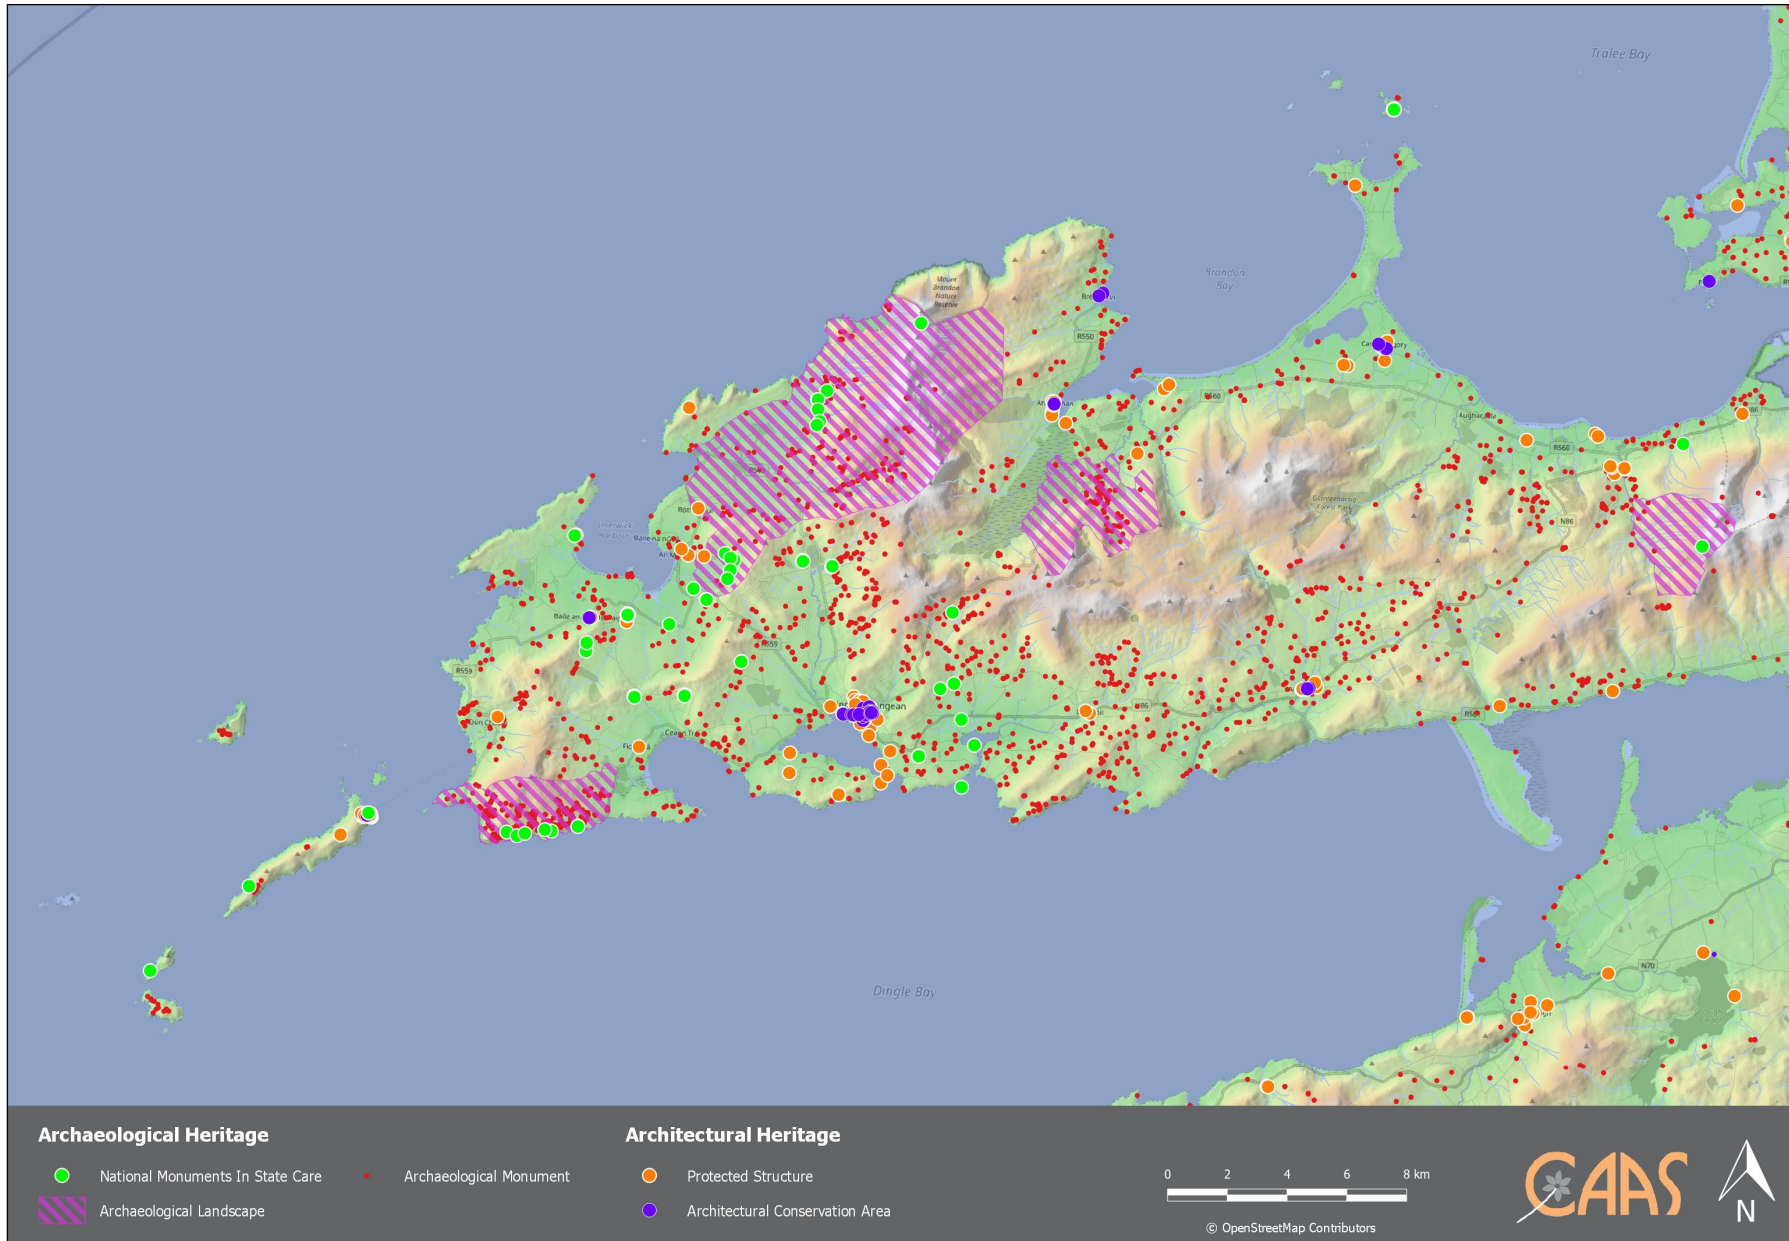

Figure 4.9 Archaeological and Architectural Heritage

4.13 Landscape

4.13.1 Topography

The Peninsula comprises an area of varied landscape/seascape with rivers, lakes, pastures and mountains, stretching into the Atlantic Ocean on Ireland's south-west coast. The Peninsula is dominated by the range of mountains that forms its spine, running from the Slieve Mish range to Mount Brandon, Ireland's second highest peak. The coastline consists of steep sea cliffs, broken by sandy beaches, with two large sand spits at Inch in the south and the Maharees in the north. The Blasket Islands lie to the west of the Peninsula.

4.13.2 Landscape Character Assessment

The area to which the Plan relates is identified as being situated within seven Landscape Character Areas as listed below:

- LCA 31: Mount Eagle and Blasket Islands;
- LCA 30: Ventry and Dingle Harbours;
- LCA 32: Smerwick Harbour and Brandon Highlands;
- LCA 28: Brandon Bay;
- LCA 29: Gartinny Valley;
- LCA 27: Tralee Bay and North Slieve Mish Mountains; and
- LCA 33: Owenascaul Valley.

There are four archaeological landscapes designated within/partially within these Landscape Character Areas as mapped on Figure 4.9 and listed below:

- Mount Brandon;
- Lough Adoon/Kilmore/Ballyhoneen;
- Caherconree/Beheenagh/Curracullenagh; and
- Coumeenoole North and South/Fahan/Glanfahan.

The townlands of Glanfahan, Fahan, Coumeenoole North and South, west of Ventry provide an example of an extensive Early Medieval, secular landscape. The townlands of Ballynahow, Ballinknockane, Ballynavenooragh, Ballybrack and Ballinloghig provide an example of an extensive and nationally important, ecclesiastical and secular Early Medieval landscape that owes its outstanding

preservation to its location in an upland area of marginal lands.

Homesteads and settlements, field boundaries and field patterns, buildings and monuments, demesnes, planted woodlands, cut bogs, roads, quarries, mines and factories all attest to the imprint of people on the landscape and give distinctive character to different places across the Peninsula.

4.13.3 Protected Views and Prospects

The Dingle Peninsula contains many sites, areas and vantage points from which views over areas of great natural beauty, local landmarks, historic landscapes, may be obtained. In addition to scenic views, the County also contains important prospects i.e. prominent landscapes or areas of special amenity value or special interest that are visible from the surrounding area.

The following landscape designations provided for by the Kerry County Development Plan are considered when assessing planning applications and are mapped on Figure 4.10:

- Prime Special Amenity Area;
- Secondary Special Amenity Area; and
- Views and Prospects.

4.13.4 Existing Environmental Problems

The legislative objectives governing landscape and visual appearance were not identified as being conflicted with.

Figure 4.10 Landscape Designations

Section 5 Strategic Environmental Objectives

Strategic Environmental Objectives (SEOs) are methodological measures developed from policies that generally govern environmental protection objectives established at international, Community or Member State level e.g. the environmental protection objectives of various European Directives that have been transposed into Irish law and that are required to be implemented.

The SEOs are set out under a range of topics and are used as standards against which the provisions of the Draft Plan and the alternatives are evaluated in order to help identify which provisions would be likely to result in significant environmental effects and where such effects would be likely to occur, if - in the case of adverse effects - unmitigated.

The SEOs are linked to indicators that can facilitate monitoring the environmental effects of the Plan as well identifying targets that the Plan can help work towards.

All SEOs, indicators and targets are provided on Table 5.1 overleaf.

Further detail on legislation, plans and programmes are provided under Section 2 (and associated Appendix II "Relationship with Legislation and Other Plans and Programmes") and Section 4.

Table 5.1 Strategic Environmental Objectives, Indicators and Targets

| Environmental Component | Strategic Environmental Objectives | Indicators | Targets |
|--------------------------------------|--|---|--|
| Biodiversity, Flora and Fauna | B1: To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species ⁵⁰ | B1: Conservation status of habitats and species as assessed under Article 17 of the Habitats Directive | B1: Maintenance of favourable conservation status for all habitats and species protected under National and International legislation to be unaffected by implementation of the Plan ⁵¹ |
| | B2: To contribute towards compliance with Article 10 of the Habitats Directive with regard to the management of features of the landscape which - by virtue of their linear and continuous structure or their function act as stepping stones (designated or not) - are of major importance for wild fauna and flora and essential for the migration, dispersal and genetic exchange of wild species | B2: Percentage loss of functional connectivity without remediation resulting from Plan | B2: No significant ecological networks or parts thereof which provide functional connectivity to be lost without remediation resulting from the Plan |
| | B3: To contribute towards avoidance of significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites ⁵² and to ensure compliance with the Wildlife Acts 1976-2010 with regard to the protection of species listed on Schedule 5 of the principal Act | B3i: Number of significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites resulting from the Plan B3ii: Number of significant impacts on the protection of listed species | B3i: Avoid significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites resulting from the Plan B3ii: No significant impacts on the protection of listed species resulting from the Plan |
| Population and Human Health | PHH1: To contribute towards the protection of populations and human health from exposure to incompatible landuses | PHH1: Occurrence (any) of a spatially concentrated deterioration in human health arising from environmental factors resulting from the Plan, as identified by the Health Service Executive and Environmental Protection Agency | PHH1: No spatial concentrations of health problems arising from environmental factors as a result the Plan |
| Soil | S1: To minimise land take and loss to extent of soil resource | S1: Artificial surfaces land cover extent | S1: Contribute towards the target of the National Planning Framework's SEA (2018) to "Maintain built surface cover nationally to below the EU average of 4%." |
| Water | W1: To contribute towards the maintenance and improvement, where possible, of the quality and status of surface waters | W1i: Classification of Overall Status (comprised of ecological and chemical status) under the European Communities Environmental Objectives (Surface Waters) Regulations 2009 (SI No. 272 of 2009) W1ii: Mandatory and Guide values as set by the EU Bathing Water Directive and transposing Bathing Water Quality Regulations (SI No. 79 of 2008) | W1i: No deterioration in the status of any surface water or adverse effect upon the ability of any surface water to achieve 'good status' as a result of the Plan W1ii: No deterioration in the value of bathing waters or adverse effect upon the ability of any bathing water to achieve Mandatory values and, where possible, Guide values as a result of the Plan |

⁵⁰ 'Annexed habitats and species' refer to those listed under Annex I, II & IV of the EU Habitats Directive and Annex I of the EU Birds Directive.

⁵¹ Except as provided for in Article 6(4) of the Habitats Directive, viz. There must be: (a) No alternative solution available; (b) Imperative reasons of overriding public interest for the programme to proceed; and (c) Adequate compensatory measures in place.

⁵² The definition of a 'wildlife site' provided by the Planning and Development Act 2000, as amended, includes Natural Heritage Areas (NHAs) and proposed NHAs.

| Environmental Component | Strategic Environmental Objectives | Indicators | Targets |
|---------------------------------|---|--|---|
| | W2: To contribute towards maintaining and improving, where possible, the chemical and quantitative status of groundwaters | W2: Interactions with Groundwater Quality Standards and Threshold Values under Directive 2006/118/EC resulting from development adhering to the Plan | W2: Not to affect the ability of groundwaters to comply with Groundwater Quality Standards and Threshold Values under Directive 2006/118/EC, subject to exemptions provided for by Article 4 of the WFD |
| | W3: To contribute towards compliance with the provisions of the Flood Risk Management Guidelines | W3: Compliance of relevant lower tier assessments and decision making with the Flood Risk Management Guidelines | W3: For lower tier assessments and decision making to comply with the Flood Risk Management Guidelines |
| Air and Climatic Factors | AC1: To contribute towards climate adaptation and mitigation | AC1: Demonstration of compliance with provisions relating to climate adaptation and mitigation have been integrated into the Plan. | C1: To maximise the amount of measures relating to climate adaptation and mitigation being implemented |
| Material Assets | M1: For development to be served with adequate and appropriate critical infrastructure with sufficient capacity (drinking water, waste water, waste and transport) that does not present a danger to human health | M1: Number of instances whereby additional tourists are directed by beneficiaries of funding towards areas in the Plan area where adequate and appropriate critical infrastructure with sufficient capacity is unavailable | M1: No instances whereby additional tourists are directed by beneficiaries of funding towards areas in the Plan area where adequate and appropriate critical infrastructure with sufficient capacity that does not present a danger to human health are unavailable |
| | M2: To contribute towards the protection of public assets and infrastructure, including that relating to recreation and leisure, transport, utilities and marine areas and fisheries | M2: Number of significant adverse effects on the use of or access to public assets and infrastructure | M2: No significant adverse effects on the use of or access to public assets and infrastructure |
| | M3: To reduce waste volumes, minimise waste to landfill and increase recycling and reuse | M3: Preparation and implementation of construction and environmental management plans | M3: For construction and environmental management plans to be prepared and implemented for relevant projects |
| Cultural Heritage | CH1: To contribute towards the protection of archaeological heritage including entries to the Record of Monuments and Places and/or their context | CH1: Percentage of entries to the Record of Monuments and Places protected from significant adverse effects arising from the Plan | CH1: No unauthorised adverse effects on archaeological heritage resulting from implementation of the Plan |
| | CH2: To contribute towards the protection of architectural heritage including entries to the Records of Protected Structures and Architectural Conservation Areas and their context | CH2: Percentage of entries to the Records of Protected Structures and Architectural Conservation Areas and their context protected from significant adverse effects arising from the Plan | CH2: No unauthorised adverse effects on architectural heritage resulting from implementation of the Plan |
| Landscape | L1: To avoid conflicts with the appropriate protection of statutory designations relating to the landscape, including those included in the land use plans of Kerry County Council | L1: Number of unmitigated conflicts with the appropriate protection of statutory designations relating to the landscape, including those included in the land use plans of Kerry County Council | L1: No unmitigated conflicts with the appropriate protection of statutory designations relating to the landscape, including those included in the land use plans of Kerry County Council |

Section 6 Description of Alternatives

6.1 Introduction

As per the requirements of the SEA Directive, this SEA considers reasonable alternatives, which are capable of being implemented for Plan, taking into account the objectives and the geographical scope of the Plan.

6.2 Current Situation (Alternative 1: Business as Usual)

With respect to reputation and volume, the Dingle Peninsula is high-performing destination. In tourism terms however, the area suffers from being seen as:

- Highly seasonal;
- High volume, low-value;
- Dominated by a mature area within the destination (hot spots - Dingle Town) juxtaposed with emerging destinations across the destinations not benefiting from tourism to the same level; and
- Functioning as a microcosm of the island of Ireland with 30% of the landmass holding 70% of the traffic.

The potential socio-economic benefits of tourism are not currently being realised and it is widely regarded that tourism on the Dingle Peninsula is at a crossroads. The volume of tourists is the cause of intense pressure on the local culture, community and environment, compromising the experience itself.

There is also concern that the nature of tourism demand and tourist behaviour is resulting in a sub-optimal economy with a lower than acceptable level of tourist spending and retained economic impact in the community.

Despite the association of high volumes of visitor traffic to the Dingle Peninsula, it is key pockets of the destination that experience this level of visitor pressure while surrounding areas continue to have capacity for development.

This current situation presents **Alternative 1 (Business as Usual)** to be considered by the SEA. Numbers of visitors would continue to increase under this scenario – consistent with the development of tourism over many decades. The most popular locations on the Peninsula would see the largest increases in visitors, which would occur during the peak season.

6.3 Prepare a Plan (Alternatives 2A and 2B: Prepare a Plan)

The challenges posed by the current situation (see Section 6.2) establish a potential need for a plan that seeks to better manage tourism on the Peninsula; facilitating, promoting, supporting and coordinating stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. Such a plan would not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent (such frameworks fall under the remit of other public authorities). Any projects would continue to be required to comply, as relevant, with the various provisions of documents that form the statutory decision-making and consent-granting framework.

Features of such a Plan (in combination with the wider and extensive policy and wider and extensive policy and planning framework planning framework) would include:

- Addressing issues of seasonality and regionality while realising increased socio-economic benefits;
- Creating new and improve existing visitor experiences, and communicate cohesive and unified stories to the visitor;
- Motivating international tourists to visit and stay in the local communities across the Peninsula and increasing the economic dividend generated by international visitors to the area;
- Supporting the ongoing tourism development of the Dingle Peninsula, evolving from visitor attraction to a year-round tourism destination; and
- Simulating increased dispersion of visitors across the Dingle Peninsula throughout the year.

Under Alternative 2 there are two separate alternatives:

Alternative 2A: A Plan with Additional Requirements for Environmental Protection and Management

Fáilte Ireland provides funding sustainable tourism projects including land use and infrastructural development and land use activities. In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, **Alternative 2A** would require Fáilte Ireland's stakeholders to demonstrate compliance with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 "Site Maintenance Guidelines" and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 "Environmental Management for Local Authorities and Others" (and any subsequent replacements).

In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) would have to demonstrate compliance, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

Further environmental requirements would be integrated into the Plan under Alternative 2A, relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services.

Alternative 2B: A Plan without Additional Requirements for Environmental Protection and Management

Alternative 2B would not include the requirements for environmental protection and management described under Alternative 2A. Projects would continue to be required to comply, as relevant, with the various provisions of documents that form the statutory decision-making and consent-granting framework.

Section 7 Evaluation of Alternatives

7.1 Introduction

This section provides a comparative evaluation of the environmental effects of implementing the alternatives that are detailed under Section 6. This determination sought to understand whether each alternative was likely to improve, conflict with or have a neutral interaction with environmental components.

7.2 Methodology

The relevant aspects of the current state of the environment (see Section 4) and the Strategic Environmental Objectives (see Section 5 and Table 7.1) are used in the evaluation of alternatives.

The alternatives are evaluated using compatibility criteria (see Table 7.2 below) in order to determine how they would be likely to affect the status of the SEOs. The SEOs and the alternatives are arrayed against each other to identify which interactions - if any - would cause effects on specific components of the environment. Where the appraisal identifies a likely conflict with the status of an SEO the relevant SEO code is entered into the conflict column - e.g. B1 which stands for the SEO likely to be affected - in this instance 'To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species⁵³'.

The interactions identified are reflective of likely significant environmental effects⁵⁴.

The degree to which effects can be fully determined at this level of decision-making is limited, as the Plan will be implemented alongside planning and project development and associated environmental assessments and administrative consent of projects. Nonetheless, a comparative evaluation of the various alternatives can be provided.

⁵³ 'Annexed habitats and species' refer to those listed under Annex I, II & IV of the EU Habitats Directive and Annex I of the EU Birds Directive.

⁵⁴ These effects include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

Table 7.1 Strategic Environmental Objectives⁵⁵

| Environmental Component | Code | Strategic Environmental Objectives |
|--------------------------------------|-------------|--|
| Biodiversity, Flora and Fauna | B1 | To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species ⁵⁶ |
| | B2 | To contribute towards compliance with Article 10 of the Habitats Directive with regard to the management of features of the landscape which - by virtue of their linear and continuous structure or their function act as stepping stones (designated or not) - are of major importance for wild fauna and flora and essential for the migration, dispersal and genetic exchange of wild species |
| | B3 | To contribute towards avoidance of significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites ⁵⁷ and to ensure compliance with the Wildlife Acts 1976-2010 with regard to the protection of species listed on Schedule 5 of the principal Act |
| Population and Human Health | PHH1 | To contribute towards the protection of populations and human health from exposure to incompatible landuses |
| Soil | S1 | To minimise land take and loss to extent of soil resource |
| Water | W1 | To contribute towards the maintenance and improvement, where possible, of the quality and status of surface waters |
| | W2 | To contribute towards maintaining and improving, where possible, the chemical and quantitative status of groundwaters |
| | W3 | To contribute towards compliance with the provisions of the Flood Risk Management Guidelines |
| Air and Climatic Factors | AC1 | To contribute towards climate adaptation and mitigation |
| Material Assets | M1 | For development to be served with adequate and appropriate critical infrastructure with sufficient capacity (drinking water, waste water, waste and transport) that does not present a danger to human health |
| | M2 | To contribute towards the protection of public assets and infrastructure, including that relating to recreation and leisure, transport, utilities and marine areas and fisheries |
| | M3 | To reduce waste volumes, minimise waste to landfill and increase recycling and reuse |
| Cultural Heritage | CH1 | To contribute towards the protection of archaeological heritage including entries to the Record of Monuments and Places and/or their context |
| | CH2 | To contribute towards the protection of architectural heritage including entries to the Records of Protected Structures and Architectural Conservation Areas and their context |
| Landscape | L1 | To avoid conflicts with the appropriate protection of statutory designations relating to the landscape, including those included in the land use plans of Kerry County Council |

Table 7.2 Criteria for appraising the effect of Alternatives on SEOs

| | | | | | |
|---|-----------------------------|---------------------------|--|----------------------------|--|
| Likely to Improve status of SEOs | | | Potential Conflict with status of SEOs - likely to be mitigated by complying with other measures included within the Plan | | Probable Conflict with status of SEOs- unlikely to be fully mitigated |
| to the Greatest degree | to a Moderate degree | to a Lesser degree | to a Moderate degree | to a Greater degree | |

⁵⁵ See Section 5 for a description of Strategic Environmental Objectives.

⁵⁶ 'Annexed habitats and species' refer to those listed under Annex I, II & IV of the EU Habitats Directive and Annex I of the EU Birds Directive.

⁵⁷ The definition of a 'wildlife site' provided by the Planning and Development Act 2000, as amended, includes Natural Heritage Areas (NHAs) and proposed NHAs.

7.3 Cumulative Effects

Cumulative effects are one of the types of effects that have been considered by the assessment of the alternatives. Cumulative effects can be described as the addition of many small impacts to create one larger, more significant, impact.

There are two types of potential cumulative effects that have been considered, namely:

- Potential *intra-Plan* cumulative effects - these arise from the interactions between different types of potential environmental effects resulting from a plan, programme, etc. Where there are elevated levels of environmental sensitivities (such as those identified under Section 4), future development could result in environmental conflicts and lead to a deterioration in environmental integrity. The interrelationships between environmental components that help determine these potential effects are identified on Table 8.4 in Section 8 e.g. interrelationships between: human health and water quality; human health and air quality; human health and flood risk; and ecology and water quality.
- Potential *inter-Plan* cumulative effects - these arise when the effects of the implementation of one plan occur in combination with those of other plans, programmes, developments, etc.

In considering the relationship with legislation and other plans and programmes it is important to note that the Plan will form part of a wider and extensive policy and planning framework that covers sectors including tourism, agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications and land use planning (see Section 2, 4 and 5 and Appendix II) for a range of sectors at a range of levels (e.g. National, Regional, County and Local). Legislation, plans and programmes from these other sectors also take into account demands from both residents and tourists when considering infrastructure and service needs. These plans, in turn, are also subject to their own SEA and AA requirements and include their own requirements relating to environmental protection and management. In this way, the environment is protected in a holistic manner so that the interactions of other uses and their associated plans and programmes are taken into account. Where they exist, the SEA recognises the existence of other environmental assessments with a view to avoid duplication of assessment, in compliance with the SEA Directive.

The National Planning Framework (NPF) sets out Ireland's planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSEs) and lower tier Development Plans and Local Area Plans. The RSE for the Southern Region (Dingle is located within the Southern Region) sets out objectives relating tourism development, that have been subject to environmental assessment, including those relating to: enhancing provision of tourism and leisure amenity; promoting tourism activity; developing a road network and public transport services, facilitating improved visitor access and longer dwell times; developing walking and cycling trails, opening greater accessibility to the marine and countryside environment by sustainable modes; and facilitating appropriate tourism development, including that relating to greenways, blueways and peatlands. When adopted, the RSE will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSE and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards. These provisions are in addition to those that have been integrated into the Plan that will contribute towards sustainable development, environmental protection and environmental management (see Section 9).

Effects⁵⁸ that may arise as a result of implementing the Plan, in combination with the existing statutory planning/decision-making and consent-granting framework, have been mitigated to the extent that the only residual adverse effects likely to occur as a result of implementation of the Plan are those that are identified under Table 8.3.

Cumulative effects that have been considered include those resulting from the Plan in-combination with the following:

- Land use policy, plans and programmes (e.g. the National Planning Framework, the Regional Spatial and Economic Strategy, Development Plans and Local Area Plans);
- Water services, waste management, transport and energy infrastructure plans (e.g. Irish Water's Water Services Strategic Plan and associated Capital Investment Plan, Regional Waste Management Plans, Transportation Policies and Strategies, Grid25 and associated Implementation Programme) and the Local Economic and Community Plans; and
- Environmental protection and management plans (e.g. River Basin Management Plans, National Mitigation Plan, National Adaptation Framework, and Flood Risk Management Plans).

Potential cumulative effects include the following arising from the alternatives in combination with the plans etc. detailed above (note that potential adverse cumulative effects will be mitigated by provisions that have been integrated into the Plan - see Section 9):

- Contribution towards sustainable development, environmental protection and environmental management – various provisions for which are provided for in the aforementioned plans (**Alternatives 1, 2A and 2B**).
- Need for and use of services, infrastructure and other development (to service development, including tourism), including those related to water services, transport, access or accommodation, that are planned for and consented through the statutory framework – and associated potential adverse environmental effects on various environmental components including biodiversity and flora and fauna, the status of waters, human health, soil, emissions, cultural heritage and landscape (**Alternatives 1, 2A and 2B**).
- Contribution towards climate adaptation and mitigation through measures such as those relating to walking and cycling, charging infrastructure, flood risk management and resilience (**Alternatives 1, 2A and 2B**).
- Contribution towards travel related greenhouse gas and other emissions to air as a result of increases in tourist numbers (**Alternatives 1, 2A and 2B**).
- Helps to minimise likelihood of exceeding capacity in material assets as a result of not directing additional tourists towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified (**Alternative 2A**). This would positively impact upon the protection and management of environmental components such as human health, water, soil, air and climatic factors.
- Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats) through visitor management strategies, as relevant and appropriate (**Alternative 2A**).
- In combination with plans and programmes from all sectors potential adverse effects on all environmental components arising from all development in greenfield and brownfield areas (e.g. infrastructural, residential, accommodation, economic, forestry, agricultural etc.). The type of these effects are consistent with those described on Table 7.3. These plans and programmes from other sectors undergo SEA and comply with environmental legislation while projects are subject to EIA and AA, as relevant (**Alternatives 1, 2A and 2B**).

⁵⁸ Effects include in-combination effects – those arising from services and infrastructure (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Mitigation includes that which has been integrated into the Plan – please refer to Section 9 of this report.

7.4 Detailed Consideration of Alternatives

Table 7.3 below describes effects common to all Alternatives (1, 2A and 2B).

Table 7.3 Effects Common to All Alternatives

| Environmental Component | Environmental Effects from all Alternatives, in combination with the existing statutory planning/decision-making and consent-granting framework ⁵⁹ | |
|---|--|--|
| | Significant Positive Effect, likely to occur | Potential Significant Adverse Effect, if unmitigated |
| Biodiversity and flora and fauna | <ul style="list-style-type: none"> Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats) Contribution towards the maintenance of existing green infrastructure and its ecosystem services. Contribution towards protection of biodiversity and flora and fauna as a result of contributing towards the protection of environmental vectors, air, water and soil. | <p>Arising from both construction and operation of tourism related development/activities:</p> <ul style="list-style-type: none"> Loss of/damage to biodiversity in designated sites (including European Sites and Wildlife Sites) and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats; and disturbance to biodiversity and flora and fauna; Habitat loss, fragmentation and deterioration, including patch size and edge effects; and Disturbance (e.g. due to noise and lighting along transport corridors) and displacement of protected species such as birds and bats. |
| Population and human health | <ul style="list-style-type: none"> Contribution towards the protection of human health. Contribution towards the protection amenity usage and access. Contribution towards the sustainable growth of tourism and associated sustenance and growth of communities in Dingle. | <ul style="list-style-type: none"> Potential interactions if effects upon environmental vectors such as water are not mitigated. Potential interactions if additional tourists are directed towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified. |
| Soil | <ul style="list-style-type: none"> Contribution towards minimising land-take and loss of extent of soil resource. Contribution towards the protection of the environment from contamination. Contributes towards protection of designated sites of geological heritage. | <ul style="list-style-type: none"> Adverse impacts upon the hydrogeological and ecological function of the soil resource. Adverse effects on designated geological heritage sites. Potential for increase in coastal /river bank erosion. |
| Water | <ul style="list-style-type: none"> Contribution towards the protection of water resources (including the status of surface and groundwaters), bathing water quality and water based designations. Contribution towards flood risk management and appropriate drainage. | <ul style="list-style-type: none"> Adverse impacts upon the status of water bodies and entries to the WFD Register of Protected Areas (ecological and human value), arising from changes in quality, flow and/or morphology. Increase in flood risk. |
| Air and climatic factors | <ul style="list-style-type: none"> Contribution towards climate adaptation and mitigation. | <ul style="list-style-type: none"> Potential conflict, in combination with plans and programmes from all sectors including transport and land use planning, between increases in visitors (which is likely to result in an increase in greenhouse gas emissions and other emissions to air, including from aviation, with associated interactions with climatic factors) and local, national and European objectives to reduce carbon emissions. Potential conflicts between transport movements, including car movements, and air quality. |

⁵⁹ Effects include in-combination effects – those arising from services, infrastructure and other development (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Effects would be to varying degrees – refer to Table 7.4 for comparative evaluation.

| Environmental Component | Environmental Effects from all Alternatives, in combination with the existing statutory planning/decision-making and consent-granting framework | |
|--------------------------|--|--|
| | Significant Positive Effect, likely to occur | Potential Significant Adverse Effect, if unmitigated |
| Material Assets | <ul style="list-style-type: none"> Contributes towards protection and allows for continued use of public assets and infrastructure. Contribution towards compliance with national and regional water services and waste management policies. | <ul style="list-style-type: none"> Increased number of visitors have the potential to increase traffic levels. The need to provide adequate and appropriate water services (it is the function of Irish Water to provide for such needs). Increases in waste levels and residual wastes from visitors and construction of developments. Potential impacts upon public assets and infrastructure. |
| Cultural Heritage | <ul style="list-style-type: none"> Contribution towards the long-term protection of archaeological and architectural heritage. | <ul style="list-style-type: none"> Potential effects on designated and unknown archaeological heritage. Potential effects on architectural heritage. |
| Landscape | <ul style="list-style-type: none"> Contribution towards the protection of landscape designations. | <ul style="list-style-type: none"> Occurrence of adverse visual impacts, especially in marine, island and ridge areas where, and conflicts with the appropriate protection of statutory designations relating to the landscape. Changes in the appearance of the landscape. |

Alternative 1: Business as Usual

Sustainable development, environmental management and environmental protection under Alternative 1 is provided through the existing statutory planning and consent framework. These measures would contribute towards positive effects on the protection and management of all environmental components (see Table 7.3).

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue to be mitigated through that process.

In the absence of a Plan, there would continue to be an increase in tourist numbers – consistent with the development of tourism over many decades. The most popular locations on the Peninsula would see the largest increases in visitors, which would occur during the peak season. This would give rise to greater concentration of tourists during peak seasons and in the most popular locations thereby increasing potential environmental effects on all components and peak load additions on various infrastructure in particular locations/at particular times.

Contributions towards an increase in travel related greenhouse gas and other emissions to air, including from aviation, would not occur as a result of a Plan that seeks to lengthen dwell time and grow visitor numbers however increases in tourist numbers would occur. Similarly, the positive mitigatory effects as a result of provisions of a Plan, such as those relating to sustainable mobility, traffic management and compliance with climate adaptation and management plans/strategies would not be provided for.

There would be one layer of mitigation under Alternative 1, through the existing statutory planning and consent framework.

Alternative 2A: A Plan with Additional Requirements for Environmental Protection and Management

In addition to the measures relating to sustainable development, environmental protection, environmental management (and associated effects - see Table 7.3), which are provided under all alternatives, and measures relating to seasonality and regionality, provided for by this alternative and Alternative 2B, this alternative would provide additional requirements for environmental protection and management, including those taken from the Wild Atlantic Way Operational Programme and those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) would have to demonstrate compliance, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue to be mitigated through that process.

Although a Plan would help to improve the seasonal and geographic spread of visitors, a Plan's objective would be to increase the number of visitors to the Peninsula. Although this would be likely to happen without a Plan, a Plan would have the potential to increase numbers of tourists – and associated potential adverse effects – to a greater degree than would be the case if there was no Plan. This would be likely to contribute towards an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases will be mitigated by provisions that have been integrated into the Plan, including those relating to sustainable mobility and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).

A Plan would also help to promote new experiences – including those relating to land use activities and developments. These would also have the potential to increase adverse effects. Notwithstanding this, there would be three layers of mitigation, through:

- The existing statutory planning and consent framework;
- Visitor management strategies; and
- Additional environmental requirements for environmental protection and management, under this alternative.

Alternative 2B: A Plan without Additional Requirements for Environmental Protection and Management

In addition to the measures relating to sustainable development, environmental management and environmental protection (and associated effects - see Table 7.3), which are provided under all alternatives, this Alternative (2B) would provide measures to improve seasonality and regionality – Alternative 2A would provide this also. Seasonality and regionality provide a greater spread of tourists throughout the year and across the Peninsula thereby reducing potential environmental effects and peak load additions on various infrastructure in particular locations/at particular times.

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue to be mitigated through that process.

Although a Plan would help to improve the seasonal and geographic spread of visitors, a Plan's objective would be to increase the number of visitors to the Peninsula. Although this would be likely to happen without a Plan, a Plan would have the potential to increase numbers of tourists – and associated potential adverse effects – to a greater degree than would be the case if there was no Plan.

This would be likely to contribute towards an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases would be mitigated by the wider planning framework.

A Plan would also help to promote new experiences – including those relating to land use activities and developments. These would also have the potential to increase adverse effects. Notwithstanding this, there would be one layer of mitigation, through the existing statutory planning and consent framework.

7.5 Selected Alternative for the Plan

Taking into account the environmental effects detailed above and the challenges and opportunities present for tourism across the Peninsula, Fáilte Ireland have proceeded with Alternative 2A "A Plan with Additional Requirements for Environmental Protection and Management". A comparative assessment of all three alternatives against SEOs is provided on Table 7.4 overleaf.

Table 7.4 Comparative Evaluation of Alternatives against SEOs

| | Likely to Improve status of SEOs | | | Potential Conflict with status of SEOs - likely to be mitigated by complying with other measures included within the Plan | | Probable Conflict with status of SEOs- unlikely to be fully mitigated |

Section 8 Evaluation of Draft Plan Provisions

8.1 Introduction

The relevant aspects of the current state of the environment (see Section 4) and the Strategic Environmental Objectives (see Section 5 and Table 8.1) are used in the assessment of the Plan.

The provisions are evaluated using compatibility criteria (see Table 8.2) in order to determine how they would be likely to affect the status of the SEOs. The SEOs and the Plan provisions are arrayed against each other to identify which interactions - if any - would cause effects on specific components of the environment. Where the appraisal identifies a likely conflict with the status of an SEO the relevant SEO code is entered into the conflict column - e.g. B1 which stands for the SEO likely to be affected - in this instance 'To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species⁶⁰'.

The interactions identified are reflective of likely significant environmental effects⁶¹:

- Interactions that would be likely to improve the status of a particular SEO would be likely to result in a significant positive effect on the environmental component to which the SEO relates.
- Interactions that would potentially conflict with the status of an SEO and would be likely to be mitigated would be likely to result in potential significant negative effects however these effects will be mitigated by measures which have been integrated into the Plan (see Section 9).
- Interactions that would probably conflict with the status of an SEO and would be unlikely to be mitigated would be likely to result in a significant negative effect on the environmental component to which the SEO relates.

The degree to which effects can be fully determined at this level of decision-making is limited, as the Plan will be implemented alongside planning and project development and associated environmental assessments and administrative consent of projects. More detailed environmental measures may emanate from such assessments, further facilitating the mitigation of adverse effects.

⁶⁰ 'Annexed habitats and species' refer to those listed under Annex I, II & IV of the EU Habitats Directive and Annex I of the EU Birds Directive.

⁶¹ These effects include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

Table 8.1 Strategic Environmental Objectives

| Environmental Component | Code | Strategic Environmental Objectives |
|--------------------------------------|-------------|--|
| Biodiversity, Flora and Fauna | B1 | To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species ⁶² |
| | B2 | To contribute towards compliance with Article 10 of the Habitats Directive with regard to the management of features of the landscape which - by virtue of their linear and continuous structure or their function act as stepping stones (designated or not) - are of major importance for wild fauna and flora and essential for the migration, dispersal and genetic exchange of wild species |
| | B3 | To contribute towards avoidance of significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites ⁶³ and to ensure compliance with the Wildlife Acts 1976-2010 with regard to the protection of species listed on Schedule 5 of the principal Act |
| Population and Human Health | PHH1 | To contribute towards the protection of populations and human health from exposure to incompatible landuses |
| Soil | S1 | To minimise land take and loss to extent of soil resource |
| Water | W1 | To contribute towards the maintenance and improvement, where possible, of the quality and status of surface waters |
| | W2 | To contribute towards maintaining and improving, where possible, the chemical and quantitative status of groundwaters |
| | W3 | To contribute towards compliance with the provisions of the Flood Risk Management Guidelines |
| Air and Climatic Factors | AC1 | To contribute towards climate adaptation and mitigation |
| Material Assets | M1 | For development to be served with adequate and appropriate critical infrastructure with sufficient capacity (drinking water, waste water, waste and transport) that does not present a danger to human health |
| | M2 | To contribute towards the protection of public assets and infrastructure, including that relating to recreation and leisure, transport, utilities and marine areas and fisheries |
| | M3 | To reduce waste volumes, minimise waste to landfill and increase recycling and reuse |
| Cultural Heritage | CH1 | To contribute towards the protection of archaeological heritage including entries to the Record of Monuments and Places and/or their context |
| | CH2 | To contribute towards the protection of architectural heritage including entries to the Records of Protected Structures and Architectural Conservation Areas and their context |
| Landscape | L1 | To avoid conflicts with the appropriate protection of statutory designations relating to the landscape, including those included in the land use plans of Kerry County Council |

Table 8.2 Criteria for appraising the effect of Plan provisions on SEOs

| | | | |
|---|---|--|--|
| Likely to Improve status of SEOs | Potential Conflict with status of SEOs- likely to be mitigated | Probable Conflict with status of SEOs- unlikely to be mitigated | No Likely interaction with status of SEOs |
|---|---|--|--|

⁶² 'Annexed habitats and species' refer to those listed under Annex I, II & IV of the EU Habitats Directive and Annex I of the EU Birds Directive.

⁶³ The definition of a 'wildlife site' provided by the Planning and Development Act 2000, as amended, includes Natural Heritage Areas (NHAs) and proposed NHAs.

8.2 Overall Findings

The overall findings of the SEA are that:

- **The Plan contributes towards Compliance with Environmental Legislation and Guidelines**

Fáilte Ireland are integrating all recommendations arising from the SEA and AA processes into the Plan (see Section 9 of this report), facilitating compliance of the Plan with various European and National legislation and Guidelines relating to the sustainable development, environmental protection and environmental management.

Implementation of the Plan will contribute towards efforts to achieve a number of the 17 Sustainable Development Goals⁶⁴ of the 2030 Agenda for Sustainable Development, which were adopted by world leaders in 2015 at a United Nations Summit and came into force in 2016.

- **The Plan provides for Environmental Protection and Management**

Fáilte Ireland provides funding for sustainable tourism projects that emerge as part of specific, competitive, themed and time-bound grant schemes or as part of wider strategic partnerships. These include projects relating to land use, infrastructural development and land use activities and attractions. Reference made to such projects included in the Plan does not guarantee funding. While funding is provided to certain projects, Fáilte Ireland is not the developer.

In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, Fáilte Ireland's stakeholders shall be required to demonstrate compliance⁶⁵ with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 "*Site Maintenance Guidelines*" and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 "*Environmental Management for Local Authorities and Others*" (and any subsequent replacements).

In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards. Such legislation, policies, plans and programmes include:

- Requirements for lower-tier environmental assessment, including EIA and AA;
- The Kerry County Development Plan, including various provisions relating to sustainable development, environmental protection and environmental management; and
- The Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).

⁶⁴ Including: Goal 3 Ensure healthy lives and promote well-being for all at all ages; Goal 6 Ensure availability and sustainable management of water and sanitation for all; Goal 7 Ensure access to affordable, reliable, sustainable and modern energy for all; Goal 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all; Goal 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation; Goal 11 Make cities and human settlements inclusive, safe, resilient and sustainable; Goal 12 Ensure sustainable consumption and production patterns; Goal 13 Take urgent action to combat climate change and its impacts; Goal 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

⁶⁵ Demonstration of compliance may be supported by monitoring undertaken by the beneficiary.

Further requirements have been integrated into the Plan under the headings of “Infrastructure Capacity”, “Visitor Management” and “Green Infrastructure and Ecosystem Services” – see Section 1.1 of this Environmental Report.

- **The Plan is likely to contribute towards, in combination with other governmental policies, plans etc., an increase in greenhouse gas emissions – although such increases will be mitigated**

The Plan seeks to lengthen dwell time and grow visitor numbers to the Dingle Peninsula and would, in combination with other governmental policies, plans etc., be likely to contribute towards an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases will be mitigated by provisions that have been integrated into the Plan, including those relating to sustainable mobility and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).

Furthermore, as identified in the Climate Action Plan (Government of Ireland, 2019):

"Since 2012, greenhouse gas emissions associated with flights operating in the European Economic Area (EEA), including domestic flights as well as those to and from third countries, are covered by the EU ETS⁶⁶. Airlines are required to monitor, report and verify their emissions, and to surrender allowances against those emissions. Airlines receive tradable allowances covering a certain level of emissions from their flights per year and must purchase allowances to cover any shortfall between their allocated sum of free emissions allowances and their actual emissions, as reported annually.

To support the planned development of a global Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) by the International Civil Aviation Organisation (ICAO), the EU agreed in 2014 to limit the scope of aviation in the EU ETS to flights within the EEA. CORSIA will come into effect in 2021 and aims to stabilise global aviation emissions at 2020 levels by requiring airlines to offset any emissions growth after 2020 by purchasing eligible emission units generated by projects that reduce emissions in other sectors. As Ireland is a member of ICAO, Irish aircraft operators will have to offset any emissions growth after 2020 by purchasing eligible emission units, i.e. pay full carbon price."

- **The Plan is Consistent with the existing Statutory Decision-Making and Consent-Granting Framework**

Implementing the Plan will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, stakeholders and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The Plan does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent.

The Plan is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSEs) and lower tier Development Plans and Local Area Plans. The RSE for the Southern Region (that includes the area to which the Plan relates) sets out objectives relating to tourism development, that have been subject to environmental assessment, including those relating to: enhancing provision of tourism and leisure amenity; promoting tourism activity; developing a road network and public transport services, facilitating improved visitor access and longer dwell

⁶⁶ Emissions Trading Scheme (ETS)

times; developing walking and cycling trails, opening greater accessibility to the marine and countryside environment by sustainable modes; and facilitating appropriate tourism development, including that relating to greenways, blueways and peatlands. When adopted, the RSES will inform the review of existing, assessed lower-tier Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSES and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents, including through SEA and AA processes. In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

- **Potentially Significant Adverse Effects to be mitigated**

Potentially significant adverse environmental effects arising from the Plan, in combination with the existing statutory decision-making and consent-granting framework, are detailed on Table 8.3. These effects will be mitigated by the various provisions that have been integrated into the Plan including those that have arisen through the SEA and AA processes (see Section 9).

Table 8.3 details the various types of environmental effects likely to arise with respect to the Plan (as developed from the selected alternatives – see Section 7) as a direct result of activities under the Plan and in combination with the existing statutory decision-making and consent-granting framework. By complying with appropriate mitigation measures - including those that have been integrated into the Plan - potentially significant adverse environmental effects which could arise as a result of implementing the Plan would be likely to be avoided, reduced or offset.

Table 8.3 Overall Findings – Environmental Effects arising from Draft Plan Provisions

| Environmental Component | Environmental Effects, in combination with the existing statutory planning/decision-making and consent-granting framework ⁶⁷ | | | SEO Codes |
|---|--|--|---|-------------------------|
| | Significant Positive Effect, likely to occur | Potential Significant Adverse Effect, if unmitigated | Residual Adverse Non-Significant Effects | |
| Biodiversity and flora and fauna | <ul style="list-style-type: none"> Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats) including through: <ul style="list-style-type: none"> Visitor management strategies; and VEDP requirements for environmental protection and management. Contributes towards the maintenance of existing green infrastructure and its ecosystem services. Contribution towards protection of biodiversity and flora and fauna as a result of contributing towards the protection of environmental vectors, air, water and soil. | <p>Arising from both construction and operation of tourism related development/activities:</p> <ul style="list-style-type: none"> Loss of/damage to biodiversity in designated sites (including European Sites and Wildlife Sites) and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats; and disturbance to biodiversity and flora and fauna; Habitat loss, fragmentation and deterioration, including patch size and edge effects; and Disturbance (e.g. due to noise and lighting along transport corridors) and displacement of protected species such as birds and bats. | <ul style="list-style-type: none"> Loss of an extent of non-protected habitats and species arising from the replacement of semi-natural land covers with artificial surfaces arising from projects consented through the statutory planning/consent-granting framework. Losses or damage to ecology (these would be: in compliance with relevant legislation; and mitigated as projects would demonstrate compliance with various environmental protection and management measures) | B1 B2 B3 |
| Population and human health | <ul style="list-style-type: none"> Contribution towards the protection of human health including through VEDP requirements for environmental protection and management. Contribution towards the protection of human health as a result of not directing additional tourists towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified. Contribution towards the protection amenity usage and access. Contribution towards the sustainable growth of tourism and associated sustenance and growth of communities in Dingle. | <ul style="list-style-type: none"> Potential interactions if effects upon environmental vectors such as water are not mitigated. Potential interactions if additional tourists are directed towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified. | <ul style="list-style-type: none"> Potential interactions with residual effects on environmental vectors. This has been mitigated by provisions that have been integrated into the Plan, including those relating to sustainable development, environmental protection and environmental management. | PHH1 |

⁶⁷ Effects include in-combination effects – those arising from services, infrastructure and other development (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Mitigation includes that which has been integrated into the Plan – please refer to Section 9 of this report.

| Environmental Component | Environmental Effects, in combination with the existing statutory planning/decision-making and consent-granting framework ⁶⁷ | | | SEO Codes |
|---------------------------------|---|---|---|-------------------------|
| | Significant Positive Effect, likely to occur | Potential Significant Adverse Effect, if unmitigated | Residual Adverse Non-Significant Effects | |
| Soil | <ul style="list-style-type: none"> Various provisions (e.g. relating to maintaining the wildness of areas that have not yet been developed) help to minimise land-take and loss of extent of soil resource. Contribution towards the protection of the environment from contamination. Contributes towards protection of designated sites of geological heritage. | <ul style="list-style-type: none"> Adverse impacts upon the hydrogeological and ecological function of the soil resource. Adverse effects on designated geological heritage sites. Potential for increase in coastal /river bank erosion. | <ul style="list-style-type: none"> Loss of an extent of soil function arising from the replacement of semi-natural land covers with artificial surfaces and from sea level rise/coastal erosion. | S1 |
| Water | <ul style="list-style-type: none"> Contribution towards the protection of water resources (including the status of surface and groundwaters), bathing water quality and water based designations including through integrating requirements for environmental protection and management into the Plan. Contribution towards flood risk management and appropriate drainage. | <ul style="list-style-type: none"> Adverse impacts upon the status of water bodies and entries to the WFD Register of Protected Areas (ecological and human value), arising from changes in quality, flow and/or morphology. Increase in flood risk. | <ul style="list-style-type: none"> Increased loadings as a result of development to comply with River Basin Management Plan. Flood related risks remain due to uncertainty with regard to extreme weather events – however such risks will be mitigated by: measures that have been integrated into the Plan; and the statutory planning/consent-granting framework. | W1 W2 W3 |
| Air and climatic factors | <ul style="list-style-type: none"> Contribution towards climate adaptation and mitigation through measures relating to: <ul style="list-style-type: none"> Walking and cycling; and Contribution towards European and national objectives for climate adaptation and mitigation, taking into account a wide range of detailed measures including those relating to resilience. | <ul style="list-style-type: none"> Potential conflict, in combination with plans and programmes from all sectors including transport and land use planning, between increases in visitors (which is likely to result in an increase in greenhouse gas emissions and other emissions to air, including from aviation, with associated interactions with climatic factors) and local, national and European objectives to reduce carbon emissions. Potential conflicts between transport movements, including car movements, and air quality. | <ul style="list-style-type: none"> An increase in travel related greenhouse gas and other emissions to air, including from aviation. This has been mitigated by provisions that have been integrated into the Plan, including those relating to sustainable mobility and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions). Risks remain due to uncertainty with regard to climate and interactions with issues including flooding and material assets. | AC1 |
| Material Assets | <ul style="list-style-type: none"> Contributes towards protection and allows for continued use of public assets and infrastructure. Contains clear objectives around seasonality and regionality which look not only to spread the benefits of tourism but also the potential impacts/ load associated with tourism. Helps to minimise likelihood of exceeding capacity in material assets as a result of not directing additional tourists towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified. Contribution towards compliance with national and regional water services and waste management policies. | <ul style="list-style-type: none"> Increased number of visitors have the potential to increase traffic levels. The need to provide adequate and appropriate water services (it is the function of Irish Water to provide for such needs). Increases in waste levels and residual wastes from visitors and construction of developments. Potential impacts upon public assets and infrastructure. | <ul style="list-style-type: none"> Residual wastes to be disposed of in line with higher level waste management policies. Increased loading on critical infrastructure (drinking water, waste water, waste and transport) where no significant problems have been identified with this infrastructure. Exceedance of capacity in critical infrastructure risks remain due to uncertainty with regard to climate – however such risks will be mitigated by: measures that have been integrated into the Plan; and the statutory planning/consent-granting framework. Any impacts upon public assets and infrastructure to comply with statutory planning/consent-granting framework. | M1 M2 M3 |

| | Significant Positive Effect, likely to occur | Potential Significant Adverse Effect, if unmitigated | Residual Adverse Non-Significant Effects | |
| Cultural Heritage | <ul style="list-style-type: none"> Contribution towards the long-term protection of archaeological and architectural heritage by encouraging greater levels of awareness and appreciation through, use, interpretation and access, in line with the requirements relating to the protection of cultural heritage including: entries to the Record of Monuments and Places and/or their context; and entries to the Records of Protected Structures and Architectural Conservation Areas and their context. | <ul style="list-style-type: none"> Potential effects on designated and unknown archaeological heritage. Potential effects on architectural heritage. | <ul style="list-style-type: none"> Potential alteration to the context and setting of architectural heritage however, these will occur in compliance with legislation. Potential alteration to the context and setting of archaeological heritage however, this will occur in compliance with legislation. Potential loss of unknown archaeology however, this loss will be mitigated by measures integrated into the Plan. | CH1 CH2 |
| Landscape | <ul style="list-style-type: none"> Contribution towards the protection of landscape designations as a result of: facilitating compliance with relevant plans; and maintaining the wildness of areas that have not yet been developed. | <ul style="list-style-type: none"> Occurrence of adverse visual impacts, especially in marine, island and ridge areas where, and conflicts with the appropriate protection of statutory designations relating to the landscape. Changes in the appearance of the landscape. | <ul style="list-style-type: none"> Residual visual effects (these would comply with landscape designation provisions). | L1 |

8.3 Appropriate Assessment

Stage 2 Appropriate Assessment (AA) is being undertaken alongside preparation of the Plan. The requirement for AA is provided under the EU Habitats Directive (Directive 1992/43/EEC).

The emerging conclusion of the AA is that the Plan will not affect the integrity of the European Sites, alone or in combination with other plans or projects.

The preparation of the Plan, SEA and AA has taken place concurrently and the findings of the AA have informed the SEA. Various content has been integrated into the Plan through the SEA and AA processes (see Section 9).

8.4 Interrelationship between Environmental Components

The SEA Directive requires the Environmental Report to include information on the likely significant effects on the environment, on issues such as biodiversity, fauna, flora, population, human health, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors.

Likely significant effects on environmental components that are identified include those that are interrelated; implementation of the Plan will not affect the interrelationships between these components. The presence of significant interrelationships between environmental components is identified on Table 8.4.

Table 8.4 Potential for Interrelationships between Environmental Components

| Component | Biodiversity, flora and fauna | Population and human health | Soil | Water | Air and Climatic factors | Material assets | Cultural heritage | Landscape |
|--------------------------------------|--------------------------------------|------------------------------------|-------------|--------------|---------------------------------|------------------------|--------------------------|------------------|
| Biodiversity, flora and fauna | | No | Yes | Yes | Yes | Yes | No | Yes |
| Population and human health | | | Yes | Yes | Yes | Yes | No | Yes |
| Soil | | | | Yes | Yes | Yes | No | No |
| Water | | | | | Yes | Yes | No | No |
| Air and Climatic factors | | | | | | Yes | No | No |
| Material assets | | | | | | | Yes | Yes |
| Cultural heritage | | | | | | | | Yes |
| Landscape | | | | | | | | |

8.5 More Detailed Assessment of Plan Provisions

Central to the VEDP is the Work Plan that outlines the projects identified to deliver the Dingle Peninsula VEDP over the next three to five years. The work streams are categorised under four sections (A. Catalyst Projects, B. Experience Development Projects based on VEDP Themes, C. Destination Enabling Projects and D. Local Industry Focused projects) to provide a basis for all stakeholders to engage with the VEDP. For each action a timeframe for implementation is indicated: short (Year 1 of Plan implementation), medium (Years 2 and 3 of implementation) and long (Year 4 of implementation onwards) term. Lead agencies for each action are also identified, comprising:

- **BIM** Bord Iascaigh Mhara
- **CC** Comhaltas Ceoltóirí Éireann
- **CFCD** Comharchumann Forbartha Corca Dhuibhne
- **CFLT** Comharchumann Forbartha an Leith Triúigh Teoranta
- **CI** Colaiste Ide
- **CIK** Creative Ireland Kerry
- **DFE** Dingle Film Festival
- **DHP** Dingle Hospital Project
- **DK** Destination Kerry
- **DPTA** Dingle Peninsula Tourism Alliance
- **DWC** Dingle Way Committee
- **ENG** Ealain na Gaeltachta
- **FI** Fáilte Ireland
- **FLAG** Fisheries Local Action Groups
- **GAA** Gaelic Athletic Association
- **GDC** Gaeltacht Local Development Groups
- **HSE** Health Service Executive
- **IFA** Irish Farmers Association
- **IFI** Inland Fisheries Ireland
- **IHF** Irish Hotels Federation
- **ITT** Institute of Technology Tralee
- **KCC** Kerry County Council
- **KCT** Kerry Craft Trail
- **KETB** Kerry Education Training Board
- **LC** Local Communities
- **LEO** Local Enterprise Office
- **LL** Local Link Kerry
- **NEWKD** North, East & West Kerry Development
- **NMS** National Monuments and National Parks and Wildlife Services
- **NTO** National Trails Office
- **OCD** Oidhreacht Corca Dhuibhne
- **OK** Original Kerry
- **OPW** Office of Public Works
- **RAI** Restaurant Association of Ireland
- **SHU** Sacred Heart University
- **SKDP** South Kerry Development Partnership
- **TIL** Tourism Ireland Limited
- **TK** Taste Kerry
- **UnG** Údarás na Gaeltachta

8.5.1 Vision, Aims and Objectives

| | Likely to Improve status of SEOs | Potential Conflict with status of SEOs-likely to be mitigated | Probable Conflict with status of SEOs-unlikely to be mitigated | No Likely interaction with status of SEOs |
|---|---|---|---|--|
| <p>The overarching objective of the Plan is to support the ongoing tourism development of the Dingle Peninsula, evolving from visitor attraction to a year-round tourism destination. The purpose of the Plan is to present the stories and destination themes of the Dingle Peninsula and organise them into a development framework for adoption as a commercial action plan for the next three to five years. This framework will provide the context for tourism operators and stakeholders to work in partnership, create new and improve existing visitor experiences, and communicate cohesive and unified stories to the visitor. Based on future engagement and collaboration, the key objectives of the Plan as a three to five year commercial plan are:</p> <ul style="list-style-type: none"> • To develop compelling local experiences that are aligned to two key international marketing themes • To develop compelling experiences that: motivate visitors to stay longer and spend more; extend the length of the season; align to the Wild Atlantic Way brand and target markets; sustain and increase job creation in the local area; protect the special environmental, cultural and linguistic character of the region; and become a catalyst for a fresh approach to sustainable destination development; • Develop the Dingle Peninsula as a leading international destination as opposed to a one day visitor attraction; • Leverage the uniqueness of the natural and cultural heritage assets and devise innovative experiences for visitors to immerse themselves in Irish language and culture; • Deliver one of the most renowned walking routes in the world; and • Build on global macro tourism trends to become an internationally renowned natural wellbeing destination delivered through the natural and cultural assets of the area. <p>The Dingle Peninsula is under the Wild Atlantic Way key proposition, which is to "Experience one of the wildest, most enhancing and culturally rich coastal touring routes in the world. Wherever you travel along the Wild Atlantic Way you'll find magic, adventure, history and beauty in abundance". The VEDP identifies two overarching themes for the Wild Atlantic Way key proposition under both of which four Destination Experience Themes are identified, with which visitors can connect with that showcase the key proposition, and associated Hero Products through</p> | <p>B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1</p> | <p>B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1</p> | | |

| | | | | |
|--|--|--|--|--|
| <p>which the Destination Themes can be accessed. Supporting Experiences and Ancillary Experiences are also identified.</p> <p>Destination Experience Themes and associated Hero Products under the overarching theme of "Inspired Culture" are as follows:</p> <ul style="list-style-type: none"> • Theme: The Gaeltacht Life. Hero Products: Blasket Islands; Blasket Island Visitor centre; Irish Language Schools and vibrant Irish language in the community; An Tinteán Ceoil; and Oidhreacht Corca Dhuibhne • Theme: Learning on the Edge. Hero Products: Dingle Cookery School; Louis Mulcahy Pottery Workshops; Watersports on the North Shore; Irish language learning at Oidhreacht Corca Dhuibhne • Theme: Myths to Local Legends. Hero Products: Mount Brandon; Conor Pass; Annascaul Lake; and Gallarus Oratory. • Theme: Centuries of Creative Spirit. Hero Products: Louis Mulcahy Pottery; Blasket Islands & Blasket Island Centre; and Brian De Staic, Jeweller. <p>Destination Experience Themes and associated Hero Products under the overarching theme of "Timeless Wellbeing" are as follows:</p> <ul style="list-style-type: none"> • Theme: Seasons of Vitality. Hero Products: Dingle Way; Sleah Head Drive; Conor Pass; Dingle Sea Safari; Dingle Peninsula Blueways; Dingle Marina • Theme: Wellbeing of Adventure. Hero Products: Dingle Way; Climb Mount Brandon; Surf the Wild Atlantic Way at Inch Beach; Watersports in Castlegregory and North Shore; Scuba Diving in the Maharees; SUP Tours Dingle • Theme: A Social Energy. Hero Products: Irish Cultural Sessions in traditional pubs around Dingle Peninsula; An Tinteán Ceoil, Cloghane • Theme: Peninsula of Contrasts. Hero Products: The Dingle Way; Blasket Islands; Sleah Head Drive; Mount Brandon; Sea Safari & Harbour Cruises; Conor Pass; Eco Marine Tours | | | | |
| <p>SEA Commentary:</p> <p><i>The assessment of the Plan's overarching objective, key objectives, themes, products and experiences against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:</i></p> <ul style="list-style-type: none"> • Environmental effects detailed under subsections 8.2 to 8.4; and • Assessments of the selected alternatives for the Plan provided at Section 7 of this report. <p><i>Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. 8.5.2 Work Plan: Catalyst Projects

| Recommended Actions | | | | | | Likely to Improve status of SEOs | Potential Conflict with status of SEOs-likely to be mitigated | Probable Conflict with status of SEOs-unlikely to be mitigated | No Likely interaction with status of SEOs |
|-------------------------|-----|---|-----------|------|---------|---|---|--|---|
| Experience | | Action | Timeframe | Lead | Partner | | | | |
| Traffic Management Plan | A.1 | Undertake a programme of activity to devise a Traffic Management Plan that will investigate sustainable options to address visitor traffic movement throughout the Dingle Peninsula | ST | KCC | FI | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | | |

SEA Environmental Report for the Draft Dingle Peninsula Visitor Experience Development Plan

| Experience | | Action | Timeframe | Lead | Partner | | | | |
|------------------|-----|---|-----------|-------------|---|--|--|--|--|
| Dingle Way | A.2 | Assess the feasibility of enhancing the Dingle Way to become an internationally renowned walking destination and provide the necklace to integrate all local visitor experience themes. In developing the potential of the Dingle Way, examination with other stakeholders of the link to the Kerry Way to create an expanded international walking product should be reviewed. | LT | DWC | KCC UnG KCC FI NEWKD | | | | |
| Dingle Way | A.3 | Examine the options to secure the National Walk Scheme to facilitate the management and maintenance of the Dingle Way across the Dingle Peninsula. | ST | DWC | KCC UnG KCC FI NEWKD NTO | | | | |
| Dingle Way | A.4 | Explore the options to increase the level of off-road walking across the entire Dingle Way. | MT - LT | DWC | NEWKD UnG FI KCC | | | | |
| Dingle Way | A.5 | Review the requirements to deliver a more unified approach to communicating the practicalities of local walks and trails available to visitors throughout the Dingle Peninsula (e.g. consistent information template applied to all trails communicated online, signage and print formats). Examine the creation of a mapping / route information 'brand model' that provides a consistent approach to walks/trails information to convey an international walking destination with additional trail spurs off the Dingle Way introducing walkers to adjoining communities. | ST | DWC | KCC DK NEWKD UnG DPTA FI | | | | |
| Dingle Way | A.6 | Review options to enhance the Dingle Way experience that will focus on route segments to enable the visitor to become more immersed into the local community through local stories, accommodation, facilities and saleable experiences. Key themes should be identified for specific segments of the Dingle Way route to create the platform for enhancing the local stories associated with the area e.g. examining the Tom Crean potential of the area around Annascaul. | MT - LT | DWC | KCC DK NEWKD UnG DPTA FI | | | | |
| Dingle Way | A.7 | Examine the opportunity to scale up on one major walking event to create an internationally recognised walking festival adopting the Dingle Way theme and distributing festival activity across the Dingle Peninsula in the day and night time economy. | MT | DWC | KCC DK NEWKD UnG DPTA FI | | | | |
| Dingle Hospital | A.8 | Assess the feasibility of Dingle Hospital delivering a gateway visitor experience for the Dingle Peninsula and provide visitor interpretation for the stories of the Peninsula while contributing to the sustainable tourism development of the destination. Examine the creation of a sustainable tourism destination action plan that integrates with the wider sustainable living and environmental projects being developed through the Dingle Hospital project group. The creation of the plan will provide a wider destination focus to integrate with the recommended traffic management planning and the medium to long term focus on creating a renowned sustainable tourism destination. Examine the potential to deliver an arts and cultural visitor experience within the Dingle Hospital project in addition to leveraging the innovation theme that have the potential to create additional visitor experiences in areas such as music and film. | ST - LT | UnG DHP | HSE KCC FI | | | | |
| Brandon Basecamp | A.9 | Assess the model for advancing the Brandon Basecamp proposal as a catalyst to enhance the potential of the area as a focal point for walking and leisure activities. Devise an action plan and multi party working group to assess the immediate phases to progress the concept. | ST | UnG CFLT | KCC FI | | | | |

SEA Environmental Report for the Draft Dingle Peninsula Visitor Experience Development Plan

| Experience | | Action | Timeframe | Lead | Partner | | | | |
|------------------|------|---|-----------|----------------------------|-------------------------------------|--|--|--|--|
| Brandon Basecamp | A.10 | Undertake a needs analysis to examine the local requirements to build on the Brandon Basecamp opportunity for walking from signage to communicating the multitude of route options within the local area and build on the opportunity presented by Mount Brandon as an iconic international walking destination within the enhancement of the Dingle Way. | ST | UnG CFLT | GDC KCC DWC | | | | |
| Blueway | A.11 | Support the phased creation of the proposed Blueway Trails at eight pilot sites across the Dingle Peninsula identified within the FLAG strategy. | ST-MT | KCC | UnG KETB KCC FLAG / BIM | | | | |
| Blueway | A.12 | Undertake local tourism industry experience innovation training focused on the Blueway opportunity to integrate timeless wellbeing and inspired cultural experiences with the active leisure experiences the Blueway sites will provide across the Dingle Peninsula. | MT | KETB / FI | UnG KCC FLAG / BIM | | | | |
| Blasket Islands | A.13 | Assess the potential to extend the opening period of the Blasket Islands Visitor Centre while assessing the delivery of improved mooring facilities on the Great Blasket Island and landing access at Dun Chaoin. | ST | OPW | NPWS KCC FI | | | | |
| Blasket Islands | A.14 | Examine the potential to create an enhanced Blasket Island Visitor Trail / Experience that incorporates the new OPW visitor facilities on the Great Blasket Island with the ability to experience the Island through an island perimeter walking trail enhanced through technological interpretation. | MT - LT | OPW | NPWS UnG FI KCC | | | | |
| Maharees | A.15 | Assess the feasibility of developing new visitor experiences that enables the visitor engage in a sustainable manner with the Maharees and the Maharees Heritage Trail. | MT | NEWKD LC | KCC FI | | | | |
| Maharees | A.16 | Assess the opportunity to examine a Seven Hogs visitor experience linked with the destination opportunity for Spiritual Tourism and linking stories with other county wide spiritual tourism assets such as the Skelligs. Develop the potential of Spiritual Tourism integrated with key sites that include Mount Brandon, St Brendans Trail, Cosan na Naomh, Maharees and the Holy Wells located across the peninsula. Support the sustainable improvement of the trails to National Trails Office approved standards to enhance the existing Pilgrim Trails. | MT LT | NEWKD / LC UnG FI | KCC KETB NPWS OPW | | | | |
| Archaeology | A.17 | Assess the feasibility of expanding the rich archaeological story of the Dingle peninsula through existing visitor sites such as Gallarus Oratory and Musaeum Corca Dhuibhne to enhance existing visitor experiences while acting as an information and interpretation base to distribute visitors to surrounding archaeological sites. Examine the creation of a series of archaeological visitor experiences that build upon the density of archaeological sites and stories across the Dingle Peninsula from the Oghams to the Ice Age Valley (Gleann Sean-chair, Loch a Duin) to Machaire na Bo. | MT | OCD DPTA OPW | FI KCC LC UnG NEWKD | | | | |
| Archaeology | A.18 | Undertake a visitor experience audit at the Gallarus Oratory site to assess the sites capacity for enhanced experience development. | ST | OPW | FI | | | | |

| Experience | Action | Timeframe | Lead | Partner |
|----------------|---|-----------|-------------|----------------------------------|
| Irish Language | <p>Support the development of a new focus on the Irish language and the ability of the visitor to experience the native language of the Dingle Peninsula. This will include the development of a Five Year Plan to integrate Corcha Dhuibhne ag Caint into all tourism businesses and create an industry focused programme to integrate introductory elements of the Irish language within all visitor experiences that will be distinguishing features of the Dingle Peninsula experience. An Irish Language Development Programme will include an examination of the creation of supports such as</p> <ul style="list-style-type: none"> ■ Basic vocabulary of meet and greet ■ Tour Guide Training ■ Bi-lingual design service to support a translation and the preparation of materials such as menus, itineraries, experiences ■ Bi-lingual accommodation ■ Provision of bi-lingual menus ■ Badges to identify the wearer as capable of interacting with visitors As Gaelige and English | ST | UnG CFCD | GDC IHF RAI DPTA KCC |
| | <p>Develop a cluster of Irish speaking experiences that creates a Peninsula wide trail for visitors to sample Sli na Gaeltacht from Irish speaking accommodation, activities or experiences that reflect Gaeltacht life throughout the Dingle Peninsula. The peninsula wide cluster should provide an trail / orientation for visitors to immerse themselves in unique Gaeltacht experiences learning about the life and culture of the Dingle Peninsula and the role of the Irish language.</p> | ST - MT | UnG | FI GDC KCC DPTA |

SEA Commentary:

The assessment of the Plan's Catalyst Projects against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4; and
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 "Mitigation Measures" of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These actions will contribute towards positive environmental effects (see Table 8.3) through:

- Sustainable development, environmental protection, environmental management (e.g. Action A.1 "Traffic Management Plan that will investigate sustainable options to address visitor traffic movement"; Action A.8 "sustainable tourism destination action plan" and Action A.15 "engage in a sustainable manner");
- Regionality (dispersal of visitors throughout the area and greater use of capacity management principles, e.g. Action A.5 "additional trail spurs off the Dingle Way" and Action A.7 "distributing festival activity across the Dingle Peninsula county wide spiritual tourism assets"); and
- Visitor management (e.g. Action A.1 "Traffic Management Plan" and Action A.3 "management and maintenance of the Dingle Way").

The actions will also contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors (and associated potential adverse effects – see Table 8.3) to the Dingle Peninsula. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.

8.5.3 Work Plan Actions: Experience Development Projects

| Recommended Actions | | | | | Likely to Improve status of SEOs | Potential Conflict with status of SEOs-likely to be mitigated | Probable Conflict with status of SEOs-unlikely to be mitigated | No Likely interaction with status of SEOs |
|---------------------|--|-----------|-------------|---------------------------------------|--|--|---|--|
| Experience | Action | Timeframe | Lead | Partner | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | | |
| Inspired Culture | B.1 Enhance an immersive and integrated creative craft trail experience throughout Dingle Peninsula to provide visitors with local craft learning and immersive experiences building on the existing Kerry Craft Trail. | ST-MT | OK | UnG LEO FI KCC NEWKD | | | | |
| Inspired Culture | B.2 Examine the feasibility of a National Irish Language Literature Festival with international partners and adopting the Blasket Visitor Centre as the key host venue and acting as a catalyst to developing off season workshop opportunities | ST | OPW | KCC DPTA ENG | | | | |
| Inspired Culture | B.3 Develop an immersive peninsula wide food experience trail (Blas Corcha Dhuibhne and Place on a Plate) based on working with food champions of Corcha Dhuibhne and adherence to an agreed quality standard that differentiate the food proposition of the Dingle Peninsula. | ST | TK | RAI IFA NEWKD UnG | | | | |
| Inspired Culture | B.4 Examine the potential to create a peninsula wide Rambling House programme led by An Tinteán Ceoil, Cloghane as the anchor site to deliver a structured programme of accessible Irish music and cultural experiences throughout the peninsula | ST - MT | UnG | GDC VFI CFLT | | | | |
| Inspired Culture | B.5 Assess the creation of an integrated approach to maximising the opportunity around screen tourism to create visitor experiences to highlight key film locations across the Dingle Peninsula. Examine the feasibility of creating a series of screen tourism focal points such as the Ryans Daughter old school house and the site for filming for Star Wars. Assess the opportunity to create a co-ordinated Star Wars visitor experience focused on "where the force is strongest" at Ballyferriter and key locations with supporting visitor amenities | ST - MT | DFF DPTA | FI UnG NEWKD LC | | | | |
| Inspired Culture | B.6 Undertake a feasibility study to examine the requirements to renovate St James Church and graveyard to become a historical and cultural centre with the ability to link to the proposed spiritual tourism opportunity. | MT | KCC | LC St. James Committee Trust | | | | |
| Inspired Culture | B.7 Examine the potential to develop and enhance the interpretation of the Tom Crean story that will contribute to the overarching ambition of an adventure hub status for the Dingle Peninsula. | MT | LC | FI SKDP | | | | |
| Inspired Culture | B.8 Examine the potential of a local heritage experience trail in Keel/Boolteens and local walks that incorporates key points of heritage value for the Dingle Peninsula. | MT - LT | LC | SKDP | | | | |
| Inspired Culture | B.9 Examine the scope to create a seasonal local GAA cultural experience that introduces visitors to the heritage of Gaelic Games and the basic skills of Gaelic sports | MT | GAA | LC NEWKD | | | | |
| Inspired Culture | B.10 Examine the requirements to support sustainable access to the Dún Beag Promontory Fort and develop enhanced visitor experiences to interpret the heritage of the site through sustainable approaches. Examine new methods of interpretation for key sites across the Dingle Peninsula that will link heritage and culture with the theme of innovation through new opportunities for story delivery e.g. Virtual Reality / Augmented Reality. Examine the pilot testing of key viewing points across the destination to develop a test case for AR / VR and enhanced forms of interpretation that promotes visitor immersion with no environmental impact. | ST - MT | OPW NMS | LC FI | | | | |
| Inspired Culture | B.11 | MT | DH | FI UnG ITT | | | | |

SEA Environmental Report for the Draft Dingle Peninsula Visitor Experience Development Plan

| Experience | | Action | Timeframe | Lead | Partner |
|--------------------|------|---|-----------|-------------|----------------------------------|
| Inspired Culture | B.12 | Examine the potential to develop the Dingle Peninsula 'pop up' arts and crafts series that provides a platform for local artists to interact with visitors while supporting the dispersion of visitors across the peninsula. | ST - MT | OK | UnG KCC CIK |
| Timeless Wellbeing | B.13 | Develop clusters of seasonal Wellbeing experiences across the peninsula among existing product providers that incorporate land, water, food and social wellbeing opportunities linked to the theme of Timeless Wellbeing and experiencing the four seasons on the Dingle Peninsula. Encourage the development of new wellbeing experiences that focus on off peak season opportunities that will embrace the natural resources of the Dingle Peninsula. | ST | UnG CFLT | FI DPTA |
| Timeless Wellbeing | B.14 | Build on the portfolio of unique Dingle Peninsula mass participation events that convey the uniqueness of the Dingle Peninsula from the Brandon Bay Beach Half Marathon, Dingle Adventure Race to Wellbeing retreats and activities linked with accommodation providers. | ST | DPTA | UnG KCC FI |
| Timeless Wellbeing | B.15 | Develop the Dingle Peninsula outdoor adventure hub experience proposition with a focus on the North Shore as a centre of excellence for outdoor pursuits. Examine the requirements, facilities and amenities required to deliver a Centre of Excellence at key points on the North Shore for outdoor activities with a special focus on water based activities. | ST | LC | KCC NEWKD FI |
| Timeless Wellbeing | B.16 | Examine the sport tourism opportunity among accommodation providers to develop an off season positioning as a group training base for cycling and triathlon clubs. | ST | DPTA | LC IHF NEWKD |
| Timeless Wellbeing | B.17 | Create a series of Dingle Peninsula cycling experience trails that link cycling routes with local experiences and increase profile of Dingle Peninsula as a cycling destination and linked to proposed Blueway projects e.g. cycling combined with food experiences, cycling and arts / crafts experiences. | MT | DPTA | UnG FLAG LC TK NEWKD |
| Timeless Wellbeing | B.18 | Undertake a feasibility study to examine the potential of fishing tourism as a product area for expansion to include the opportunities that exist around sea fishing and restocking the peninsula's lakes and rivers systems | LT | IFI | UnG DPTA LC |

SEA Commentary:

The assessment of the Plan's Catalyst Projects against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4; and
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 "Mitigation Measures" of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These actions will contribute towards positive environmental effects (see Table 8.3) through:

- Sustainable development, environmental protection, environmental management (e.g. Action B.6 "renovate St James Church and graveyard to become a historical and cultural centre local heritage", Action B.8 "experience trail that incorporates key points of

heritage value”, Action B.10 “sustainable access to the Dún Beag Promontory Fort”, Action B.11 “no environmental impact”, Action B.17 “cycling destination” and Action B.18 “restocking the peninsula’s lakes and rivers systems”);

- Seasonality (more evenly spreading visitors over time by promoting all year round visitor experiences (e.g. Action B.9 “seasonal local GAA cultural experience” and Action B.13 “seasonal Wellbeing experiences across the peninsula to develop an off-season positioning”);
- Regionality (dispersal of visitors throughout the area and greater use of capacity management principles, e.g. Action B.3 “peninsula wide food experience trail”, Action B.4 “peninsula wide Rambling House programme” and Action B.12 “dispersion of visitors across the peninsula”)

The actions will also contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors (and associated potential adverse effects – see Table 8.3) to the Dingle Peninsula. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.

8.5.4 Work Plan Actions: Destination Enabling Projects and Industry Development

| Recommended Actions | | | | | | Likely to Improve status of SEOs | Potential Conflict with status of SEOs- likely to be mitigated | Probable Conflict with status of SEOs- unlikely to be mitigated | No Likely interaction with status of SEOs |
|--------------------------------------|--|-----------|---------------------|----------------------------------|--|--|--|---|---|
| Destination Enabling Projects | | | | | | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | B1 B2 B3 PHH1 S1 W1 W2 W3 AC1 M1 M2 M3 CH1 CH2 L1 | | |
| Experience | Action | Timeframe | Lead | Partner | | | | | |
| Destination Projects | C.1 Enhance and grow as appropriate existing arts, culture, Irish Language and activity festivals on the Dingle Peninsula e.g. Feile na Bealtaine. Enhance the existing festivals to incorporate the new stories and themes and further develop them to reflect the new experiences and spread across the peninsula | MT | AMEND DPTA | AMMEND | | | | | |
| Destination Projects | C.2 Examine models of best practice to monitor and manage sustainable tourism across the Dingle Peninsula while also examining the opportunity to leverage off international sustainable destination management profiling opportunities such as Sustainable Destination Awards. | ST - LT | KCC | FI DHP SHU DPTA ITT | | | | | |
| Destination Projects | C.3 Identify and target international awards for the Dingle Peninsula to contest in the areas of sustainable and responsible tourism that contributes to the sustainable tourism ambition of the Dingle Peninsula. | MT | KCC | FI DHP SHU DPTA | | | | | |
| Destination Projects | C.4 Explore the potential for the Dingle Peninsula to become the pilot site for Kerry through the adoption of the Barcelona Declaration of Tourism and Cultural Heritage (UNWTO) | MT | KCC | DH FI | | | | | |
| Destination Projects | C.5 Devise an agri-tourism development programme to engage with the farming community to consider the creation of immersive agri-tourism experiences e.g. meet the producers, live like a local. Examine current agri providers to local industry (restaurants, retail) to identify potential new experiences e.g. milk suppliers that currently supply local manufacturers | ST - MT | AGRI TOURISM SECTOR | IFA UnG KCC FI NEWKD | | | | | |
| Destination Projects | C.6 Examine the creation of a destination agri-tourism pilot to link a number of agri-tourism food production experiences e.g. Farming story of Annascaul that showcases the farming story on the Wild Atlantic Way linked to the stories of the Maherees vegetables. | MT - LT | AGRI TOURISM SECTOR | TK IFA LC UnG NEWKD | | | | | |
| Destination Projects | C.7 Examine the feasibility of the development of an Outdoor Learning Centre for Biodiversity and Natural heritage to communicate the natural heritage of the Dingle Peninsula adopting the uniqueness of the Maherees as the initial focal point. | LT | LC | KCC NEWKD | | | | | |

SEA Environmental Report for the Draft Dingle Peninsula Visitor Experience Development Plan

| Experience | | Action | Timeframe | Lead | Partner |
|-----------------------------|------|--|-----------|-------------|----------------------------------|
| Destination Projects | C.8 | Review options to consider the viability of the Castlegregory Visitor Information Office as the focus for visitor orientation across the North Shore commencing with peak season operations. | ST | LC | DPTA LC FI KCC |
| Destination Projects | C.9 | Support the pilot Local Link peninsula bus service with a view to expanding the reach of service across the Dingle Peninsula with interval services being provided for visitors and the local community | ST-MT | LL | KCC FI |
| Destination Projects | C.10 | Encourage the creation of conditions that will promote the creation of diverse categories of bed stock in the accommodation sector while also encouraging new levels of innovation in accommodation delivery e.g. glamping | ST - LT | KCC | FI |
| Destination Projects | C.11 | Examine the provision of electronic tourist information signs at appropriate locations. | LT | KCC | FI |
| Destination Project | C.12 | Examine the opportunity to create a looped trail from Dingle Town around Cnoc an Chairn while also completing the Dingle Harbour Walk and examination of upgrading the lighthouse. | MT | DWC | KCC LC NEWKD |
| Industry Development | | | | | |
| Experience | | Action | Timeframe | Lead | Partner |
| Industry Development | D.1 | Create a Dingle Peninsula Experience Innovation Academy that is the focal point for industry training and mentoring to develop new and innovative visitor experiences adopting the VEDP as basis for commercial development. | ST | FI | UnG ITT LEO KETB KCC |
| Industry Development | D.2 | Develop the capacity of the tourism industry to create saleable experiences for hosting and selling online to the international market | ST | FI | UnG ITT LEO KETB KCC |
| Industry Development | D.3 | Examine options to create a supply chain for future staffing requirements across the tourism industry through engagement with third level and training industry partners. | ST | KETB ITT | SHU FI UnG DPTA |
| Industry Development | D.4 | Develop a training programme that supports the development of a new approach to guiding at key heritage sites throughout the peninsula | ST - MT | KETB ITT | OPW UnG |
| Industry Development | D.5 | Develop a Wellbeing focussed training and enterprise programme to create awareness of the scope and definition of local wellbeing opportunities presented by the natural assets of the area and stimulate wellness related enterprise development. | ST | KETB ITT | UnG FI LEO |
| Industry Development | D.6 | Organise peninsula wide industry familiarisation trips to build relationships between providers, build awareness of what's on offer, reveal connections and partnership opportunities between tourism providers. | ST | DPTA | FI UnG IHF LC |
| Industry Development | D.7 | Examine the potential to locate a unique hospitality training facility on the Dingle Peninsula that incorporates both a hospitality staff training facility and visitor experience modelled on existing national models delivered by Education and Training Boards | LT | KETB | ITT LEO |
| Industry Development | D.8 | Examine ways to support the Dingle Peninsula Western Massachusetts Diaspora Association which aims to set up a reciprocal marketing and promotional platform for both destinations on either side of the Atlantic. This will give the Dingle Peninsula (and Kerry) a base from which to promote the region into New England and the Mid Atlantic Region of New York State, City and New Jersey. This will have cultural, educational, tourism and artisan opportunities. | MT | DPTA | FI LEO OK KCC UnG |

SEA Commentary:

The assessment of the Plan's Catalyst Projects against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- *Environmental effects detailed under subsections 8.2 to 8.4; and*
- *Assessments of the selected alternatives for the Plan provided at Section 7 of this report.*

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 "Mitigation Measures" of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- *The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and*
- *The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.*

These actions will contribute towards positive environmental effects (see Table 8.3) through:

- *Sustainable development, environmental protection, environmental management (e.g. Action C.2 "models of best practice to monitor and manage sustainable tourism... sustainable destination management profiling opportunities such as Sustainable Destination Awards", Action C.3 "sustainable and responsible tourism", Action C.7 "Outdoor Learning Centre for Biodiversity and Natural heritage", Action C.9 "Local Link peninsula bus service" and Action C.11 "electronic tourist information signs");*
- *Regionality (dispersal of visitors throughout the area and greater use of capacity management principles, e.g. Action C.1 "spread across the peninsula" and Action D.6 "peninsula wide"); and*
- *Visitor management (e.g. Action C.2 "models of best practice to monitor and manage sustainable tourism" and Action C.11 "electronic tourist information signs").*

The actions will also contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors (and associated potential adverse effects – see Table 8.3) to the Dingle Peninsula. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.

Section 9 Mitigation Measures

9.1 Introduction

Mitigation measures are measures envisaged to prevent, reduce and, as fully as possible, offset any significant adverse impacts on the environment of implementing the Plan. Various environmental sensitivities and issues have been communicated to Fáilte Ireland through the SEA and Appropriate Assessment (AA) processes.

By integrating all SEA and AA recommendations into the Plan⁶⁸, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan are maximised.

Mitigation was achieved through the following:

- Establishing the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework⁶⁹; and
- Integrating Requirements for Environmental Compliance into the Plan⁷⁰.

9.2 Establishing the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework⁷¹

The SEA team worked with the Plan-preparation team at Fáilte Ireland in order to help establish the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. **The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent.**

The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland's planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSEs) and lower tier Development Plans and Local Area Plans. The RSE for the Southern Region (that includes the area to which the VEDP relates) sets out objectives relating tourism development, that have been subject to environmental assessment, including those relating to: enhancing provision of tourism and leisure amenity; promoting tourism activity; developing a road network and public transport services, facilitating improved visitor access and longer dwell times; developing walking and cycling trails, opening greater accessibility to the marine and countryside environment by sustainable modes; and facilitating appropriate tourism development, including that relating to greenways, blueways and

⁶⁸ All recommendations made by the SEA and AA processes either have already been integrated into the Draft Plan that is being placed on public display or shall be integrated into the Plan in advance of adoption.

⁶⁹ This framework includes various environmental requirements.

⁷⁰ These requirements include those that have arisen through the SEA and/or AA processes.

⁷¹ This framework includes various environmental requirements.

peatlands. When adopted, the RSES will inform the review of existing, assessed lower-tier Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the VEDP shall be consistent with and conform with the NPF, RSES and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the VEDP is not part and does not contribute towards.

Figure 9.1 provides a schematic of the relationship between Visitor Experience Development Plans and the existing Statutory Decision-Making and Consent-Granting Framework. Also indicated is the hierarchy of accompanying environmental assessment in force. Note that the Overall Findings of this SEA are provided under Section 8.2 of this SEA Environmental Report.

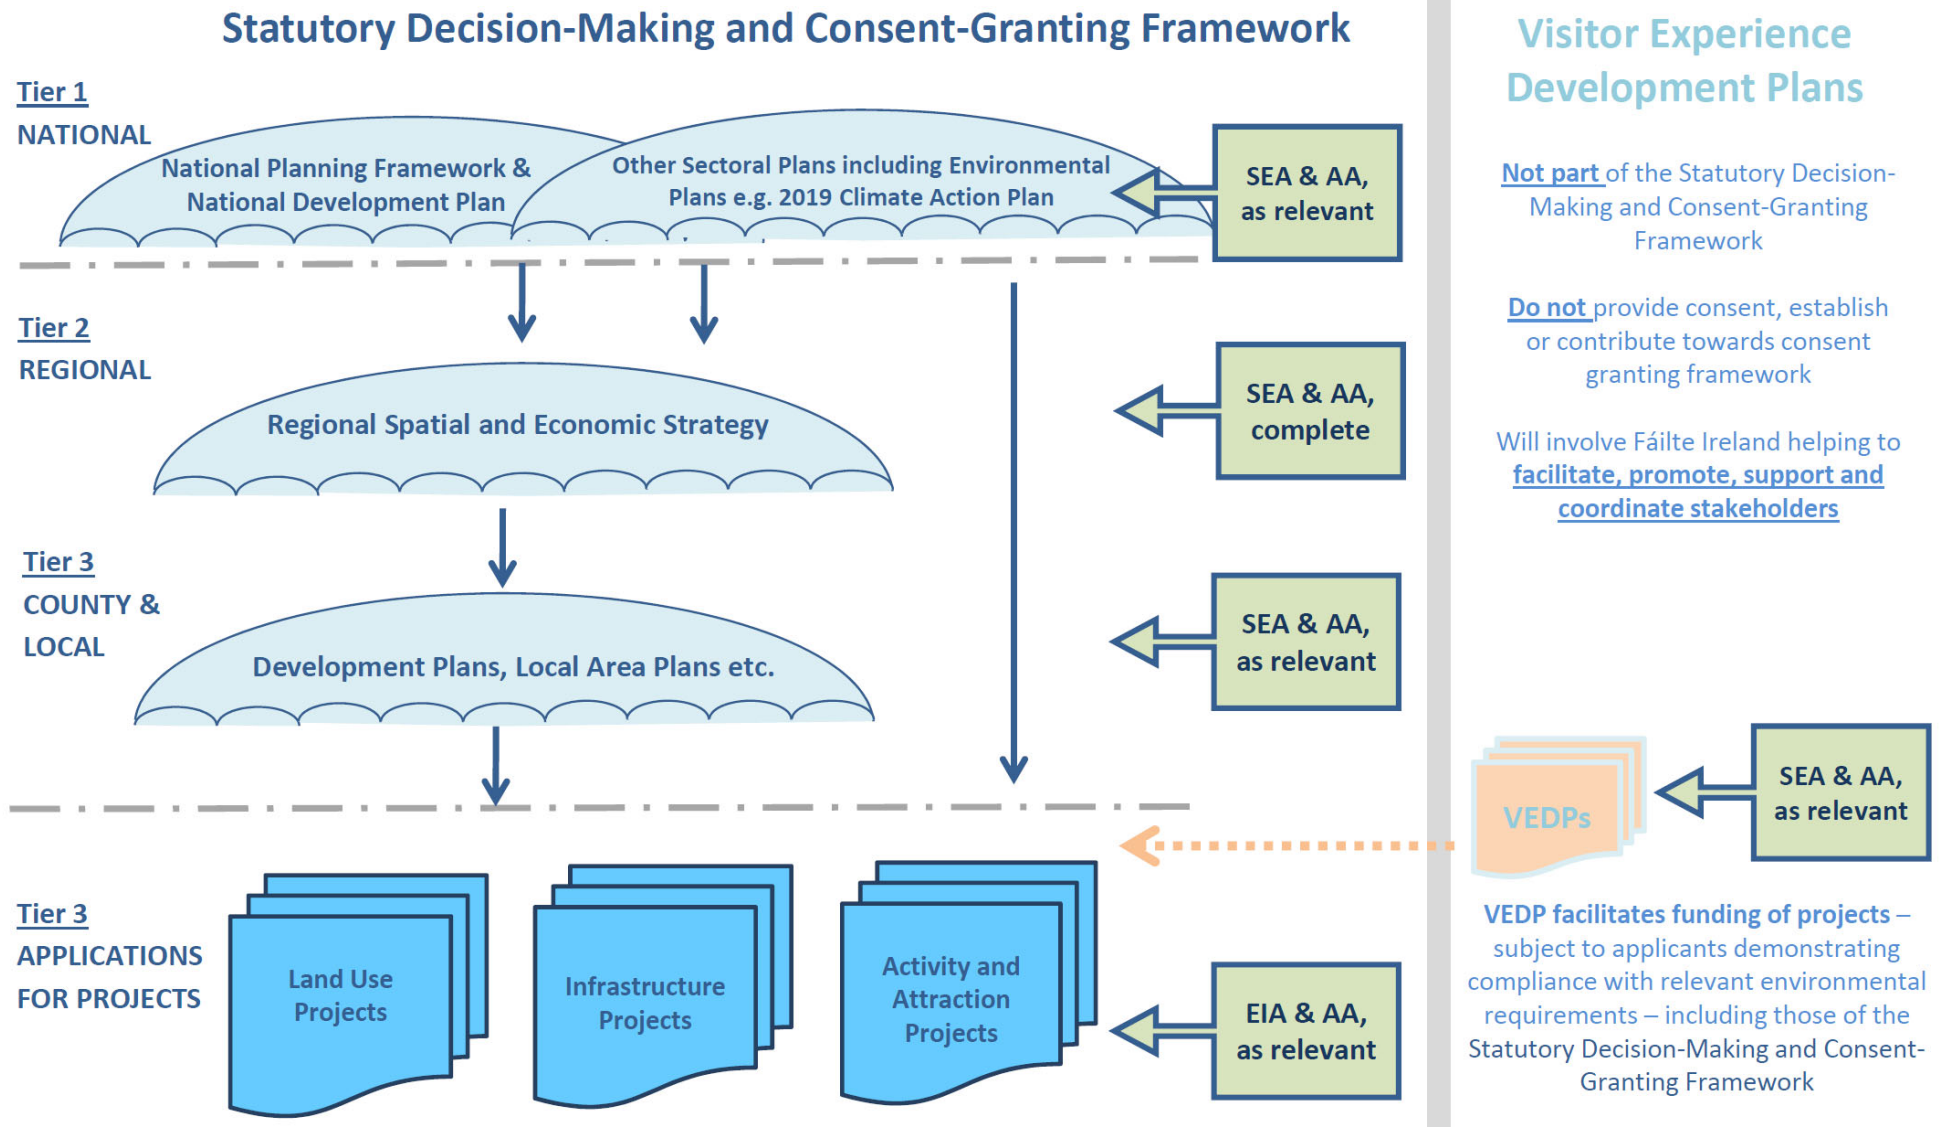

Figure 9.1 Statutory Decision-Making and Consent-Granting Framework, VEDPs and Environmental Assessment Requirements

9.3 Integrating Requirements for Environmental Protection and Management into the Plan⁷²

The SEA and AA team worked with the Plan-preparation team at Fáilte Ireland in order to integrate requirements for environmental protection and management into the Plan.

Fáilte Ireland provides funding for sustainable tourism projects that emerge as part of specific, competitive, themed and time-bound grant schemes or as part of wider strategic partnerships. These include projects relating to land use, infrastructural development and land use activities and attractions. Reference made to such projects included in the Plan does not guarantee funding. While funding is provided to certain projects, Fáilte Ireland is not the developer.

In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, Fáilte Ireland's stakeholders shall be required to demonstrate compliance⁷³ with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 "*Site Maintenance Guidelines*" and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 "*Environmental Management for Local Authorities and Others*" (and any subsequent replacements).

In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the VEDP is not part and does not contribute towards. Such legislation, policies, plans and programmes include:

- Requirements for lower-tier environmental assessment, including EIA and AA;
- The Kerry County Development Plan, including various provisions relating to sustainable development, environmental protection and environmental management⁷⁴; and
- The Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions)⁷⁵.

Infrastructure Capacity⁷⁶

With respect to infrastructural capacity (including drinking water, wastewater, waste and transport) the potential impact on existing infrastructure as well as the potential environmental effects of a likely increase in tourism-related traffic volumes along any routes resulting from the relevant initiative shall be considered and mitigated as appropriate, where relevant. The promotion of developing visitor friendly infrastructure where it is required will also be encouraged.

Visitor Management⁷⁷

Those receiving funding shall seek to manage any increase in visitor numbers and/or any change in visitor behaviour in order to avoid significant effects including loss of habitat and disturbance, including ensuring that new projects are a suitable distance from ecological sensitivities.

⁷² These requirements include those that have arisen through the SEA and/or AA processes.

⁷³ Demonstration of compliance may be supported by monitoring undertaken by the beneficiary.

⁷⁴ For more information please refer to Appendix II of this report or the website of the relevant public authority.

⁷⁵ For more information please refer to Section 4.10 and/or

Appendix II of this report or the website of the relevant public authority.

⁷⁶ This requirement has arisen through the SEA and/or AA processes.

⁷⁷ This requirement has arisen through the SEA and/or AA processes.

Extensive research by Fáilte Ireland has shown improved environmental outcomes (including improved attainment of conservation objectives) in areas with visitor management strategies. Visitor management strategies will be required for proposed plans, programmes and projects that are to receive funding as relevant and appropriate.

Green Infrastructure and Ecosystem Services⁷⁸

Those receiving funding shall contribute towards the maintenance of existing green infrastructure and its ecosystem services, taking into account the output of the Mapping and Assessment of Ecosystem Services project being undertaken by the NPWS. Proposals for the development of any green infrastructure should demonstrate the synergies that can be achieved with regard to the: provision of open space amenities; sustainable management of water; protection and management of biodiversity; protection of cultural heritage; and protection of protected landscape sensitivities.

⁷⁸ This requirement has arisen through the SEA and/or AA processes.

Section 10 Monitoring Measures

10.1 Introduction

The SEA Directive requires that the significant environmental effects of the implementation of plans and programmes are monitored. This section details the measures that have been selected in order to monitor the likely significant effects of implementing relevant Fáilte Ireland Plans, Programmes, etc.

Monitoring can demonstrate the positive effects facilitated by the Plan and can enable, at an early stage, the identification of unforeseen adverse effects and the undertaking of appropriate remedial action.

The occurrence of persistent significant adverse environmental effects which are directly attributable to tourism would necessitate consideration of the effects in the context of the Plan and a possible review of part(s) of the Plan.

10.2 Indicators and Targets

Monitoring is based around indicators that allow quantitative measures of trends and progress over time relating to the Strategic Environmental Objectives identified in Section 5 and used in the evaluation. Each indicator to be monitored is accompanied by the target(s) that were identified with regard to the relevant strategic actions.

Table 10.1 overleaf shows the current indicators and targets that have been selected for monitoring the likely significant environmental effects of implementing relevant Fáilte Ireland Plans, Programmes, etc. These monitoring measures are updated on an ongoing basis.

Monitoring is an ongoing process and the programme allows for flexibility and further refinement of indicators and targets.

10.3 Sources

Confirmation of compliance with relevant environmental measures (see Section 9) will be a source of information for the Monitoring Programme. This documentation may include monitoring undertaken by beneficiaries to demonstrate compliance with the environmental requirements.

Other existing monitoring sources will be used, including:

- Information gathered through existing Fáilte Ireland environmental monitoring programmes (and any subsequent replacements), including the Monitoring Programme for the Wild Atlantic Way, a sub-programme of which will be extended to/reported on for the Dingle Peninsula VEDP area in order to monitor any effects of visitors (see Section 4.6.3);
- Sources maintained by Kerry County Council (such as those arising from the SEA of land use plans) and the relevant authorities e.g. the Environmental Protection Agency, the National Parks and Wildlife Service and the Central Statistics Office; and
- Lower-tier environmental assessment and decision making – including a review of project approvals granted and associated documents – will also be utilised as part of the Monitoring Programme.

10.4 Reporting and Responsibility

Reporting on environmental monitoring will address the indicators set out below. Fáilte Ireland is responsible for the ongoing review of indicators and targets, collating existing relevant monitored data, the preparation of monitoring evaluation report(s), the publication of these reports and, if necessary, the carrying out of corrective action, in combination with the relevant authorities.

Environmental monitoring for the VEDP and other existing/future Fáilte Ireland plans, programmes, etc. may be undertaken and reported on at the same time. The findings of monitoring will be reported on periodically with frequencies to be determined during implementation.

Table 10.1 Selected Indicators, Targets and Monitoring Sources

| Environmental Component | Indicators | Targets | Source and (where available) Frequency |
|--------------------------------------|--|--|---|
| Biodiversity, Flora and Fauna | B1: Conservation status of habitats and species as assessed under Article 17 of the Habitats Directive | B1: Maintenance of favourable conservation status for all habitats and species protected under National and International legislation to be unaffected by implementation of the Plan ⁷⁹ | <ul style="list-style-type: none"> • Documentation demonstrating compliance with “Requirements for Environmental Protection and Management” – see Section 9 • Lower tier environmental assessment and decision making by local authorities • SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) • Department of Culture, Heritage and the Gaeltacht report of the implementation of the measures contained in the Habitats Directive - as required by Article 17 of the Directive (every 6 years) • Department of Culture, Heritage and the Gaeltacht’s National Monitoring Report for the Birds Directive under Article 12 (every 3 years) • Consultations with the NPWS • CORINE mapping resurvey (every c. 5 years) • Input from any other existing or replacement Fáilte Ireland monitoring programmes |
| | B2: Percentage loss of functional connectivity without remediation resulting from Plan | B2: No significant ecological networks or parts thereof which provide functional connectivity to be lost without remediation resulting from the Plan | |
| | B3i: Number of significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites resulting from the Plan | B3i: Avoid significant impacts on relevant habitats, species, environmental features or other sustaining resources in designated sites including Wildlife Sites resulting from the Plan | |
| | B3ii: Number of significant impacts on the protection of listed species | B3ii: No significant impacts on the protection of listed species resulting from the Plan | |
| Population and Human Health | PHH1: Occurrence (any) of a spatially concentrated deterioration in human health arising from environmental factors resulting from the Plan, as identified by the Health Service Executive and Environmental Protection Agency | PHH1: No spatial concentrations of health problems arising from environmental factors as a result the Plan | <ul style="list-style-type: none"> • Documentation demonstrating compliance with “Requirements for Environmental Protection and Management” – see Section 9 • Lower tier environmental assessment and decision making by local authorities • SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) • Consultations with the HSE and EPA • Input from any other existing or replacement Fáilte Ireland monitoring programmes |
| Soil | S1: Artificial surfaces land cover extent | S1: Contribute towards the target of the National Planning Framework’s SEA (2018) to “Maintain built surface cover nationally to below the EU average of 4%.” | <ul style="list-style-type: none"> • Documentation demonstrating compliance with “Requirements for Environmental Protection and Management” – see Section 9 • Lower tier environmental assessment and decision making by local authorities • SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) • CORINE mapping resurvey (every c. 5 years) • Input from any other existing or replacement Fáilte Ireland monitoring programmes |

⁷⁹ Except as provided for in Article 6(4) of the Habitats Directive, viz. There must be: (a) No alternative solution available; (b) Imperative reasons of overriding public interest for the programme to proceed; and (c) Adequate compensatory measures in place.

SEA Environmental Report for the Draft Dingle Peninsula Visitor Experience Development Plan

| Environmental Component | Indicators | Targets | Source and (where available) Frequency |
|---------------------------------|---|--|---|
| Water | <p>W1i: Classification of Overall Status (comprised of ecological and chemical status) under the European Communities Environmental Objectives (Surface Waters) Regulations 2009 (SI No. 272 of 2009)</p> <p>W1ii: Mandatory and Guide values as set by the EU Bathing Water Directive and transposing Bathing Water Quality Regulations (SI No. 79 of 2008)</p> <p>W2: Interactions with Groundwater Quality Standards and Threshold Values under Directive 2006/118/EC resulting from development adhering to the Plan</p> <p>W3: Compliance of relevant lower tier assessments and decision making with the Flood Risk Management Guidelines</p> | <p>W1i: No deterioration in the status of any surface water or adverse effect upon the ability of any surface water to achieve 'good status' as a result of the Plan</p> <p>W1ii: No deterioration in the value of bathing waters or adverse effect upon the ability of any bathing water to achieve Mandatory values and, where possible, Guide values as a result of the Plan</p> <p>W2: Not to affect the ability of groundwaters to comply with Groundwater Quality Standards and Threshold Values under Directive 2006/118/EC, subject to exemptions provided for by Article 4 of the WFD</p> <p>W3: For lower tier assessments and decision making to comply with the Flood Risk Management Guidelines</p> | <ul style="list-style-type: none"> Documentation demonstrating compliance with "Requirements for Environmental Protection and Management" – see Section 9 Lower tier environmental assessment and decision making by local authorities Data issued under the Water Framework Directive Monitoring Programme for Ireland (multi-annual) EPA <i>The Quality of Bathing Water in Ireland</i> reports SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) Input from any other existing or replacement Fáilte Ireland monitoring programmes |
| Air and Climatic Factors | <p>AC1: Demonstration of compliance with provisions relating to climate adaptation and mitigation have been integrated into the Plan.</p> | <p>C1: To maximise the amount of measures relating to climate adaptation and mitigation being implemented</p> | <ul style="list-style-type: none"> Documentation demonstrating compliance with "Requirements for Environmental Protection and Management" – see Section 9 Lower tier environmental assessment and decision making by local authorities SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) Input from any other existing or replacement Fáilte Ireland monitoring programmes |
| Material Assets | <p>M1: Number of instances whereby additional tourists are directed by beneficiaries of funding towards areas in the Plan area where adequate and appropriate critical infrastructure with sufficient capacity is unavailable</p> <p>M2: Number of significant adverse effects on the use of or access to public assets and infrastructure</p> <p>M3: Preparation and implementation of construction and environmental management plans</p> | <p>M1: No instances whereby additional tourists are directed by beneficiaries of funding towards areas in the Plan area where adequate and appropriate critical infrastructure with sufficient capacity that does not present a danger to human health are unavailable</p> <p>M2: No significant adverse effects on the use of or access to public assets and infrastructure</p> <p>M3: For construction and environmental management plans to be prepared and implemented for relevant projects</p> | <ul style="list-style-type: none"> Documentation demonstrating compliance with "Requirements for Environmental Protection and Management" – see Section 9 Lower tier environmental assessment and decision making by local authorities SEA Monitoring Programme reports for the land use plans of relevant local authorities (as required, monitoring reports published on various timescales and frequencies) Consultations with the partners such as the EPA, Irish Water and/or Kerry County Council Input from any other existing or replacement Fáilte Ireland monitoring programmes |

Appendix I SEA Determination

SEA Determination

Strategic Environmental Assessment (SEA) Screening Determination

for the:

Draft Dingle Peninsula Visitor Experience Development Plan

Article 3 para. 2 of the SEA Directive¹, introduced the requirement that SEA be carried out on plans and programmes, or modifications to these:

- a) which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to the EIA Directive², or
- b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of the Habitats Directive³ i.e. the Directive requires that SEA is undertaken where Stage 2 Appropriate Assessment (AA)⁴ is being undertaken on plans, programmes etc.

The tourism sector Plan does not contribute towards the framework for future development consent of projects listed in Annexes I and II to the EIA Directive and does not contain provisions or define rules that must be complied with when administrative consent of other projects is being granted.

The Plan does, however, fall under the definition of a "plan" contained within the Birds and Natural Habitats Regulations 2011 (as amended) and therefore must be screened for the need to undertake AA. The Screening for AA has found that the Plan has the potential, if unmitigated, to affect the ecological integrity European Sites and that measures to ensure that potential effects are avoided are required. Taking into account the requirements of the Habitats Directive and recent case law (including, European Court of Justice Judgement C323-17), Stage 2 AA must therefore be carried out for the Plan. As Stage 2 AA is being undertaken on the Plan, SEA must also be undertaken for this Plan - see requirement at b) above.

This determination has been made having regard to the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (Statutory Instrument Number (SI No. 435 of 2004), as amended by the European Communities (Environmental Assessment of Certain Plans and Programmes) (Amendment) Regulations 2011 (SI No. 200 of 2011).

Signatory:

Date: 04.11.19

¹ Directive 2001/42/EC of the European Parliament and of the Council of Ministers, of 27th June 2001, on the Assessment of the Effects of Certain Plans and Programmes on the Environment

² Directive 2011/92/EU of the European Parliament and of the Council of 13 December 2011, on the assessment of the effects of certain public and private projects on the environment (codification), as amended by Directive 2014/52/EU

³ Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora

⁴ AA is provided for by the Habitats Directive and is a focused and detailed impact assessment of the implications of a strategic action or project, alone and in combination with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.

Appendix II Relationship with Legislation and Other Plans and Programmes

| Legislation, Plan, etc. | Summary of high level aim/ purpose/ objective | Summary of lower level objectives, actions etc. | Relevance to the Plan |
|--|---|---|---|
| European Level SEA Directive (2001/42/EC) | <ul style="list-style-type: none"> Contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development. Provide for a high level of protection of the environment by carrying out an environmental assessment of plans and programmes which are likely to have significant effects on the environment. | <ul style="list-style-type: none"> Carry out an environmental assessment for plans or programmes referred to in Articles 2 to 4 of the Directive. Prepare an environmental report which identifies, describes and evaluates the likely significant effects on the environment of implementing the plan or programme and reasonable alternatives that consider the objectives and the geographical scope of the plan or programme. Consult with relevant authorities, stakeholders and public allowing sufficient time to make a submission. Consult other Member States where the implementation of a plan or programme is likely to have transboundary environmental effects. Inform relevant authorities and stakeholders on the decision to implement the plan or programme. Issue a statement to include requirements detailed in Article 9 of the Directive. Monitor and mitigate significant environmental effects identified by the assessment. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| EIA Directive (2011/92/EU as amended by 2014/52/EU) | <ul style="list-style-type: none"> Requires the assessment of the environmental effects of public and private projects which are likely to have significant effects on the environment. Aims to assess and implement avoidance or mitigation measures to eliminate environmental effects, before consent is given of projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. Those projects are defined in Article 4. | <ul style="list-style-type: none"> All projects listed in Annex I are considered as having significant effects on the environment and require an EIA. For projects listed in Annex II, a "screening procedure" is required to determine the effects of projects on the basis of thresholds/criteria or a case by case examination. This should take into account Annex III. The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 12, the direct and indirect effects of a project on the following factors: human beings, fauna and flora, soil, water, air, climate and the landscape, material assets and the cultural heritage, the interaction between each factor. Consult with relevant authorities, stakeholders and public allowing sufficient time to make a submission before a decision is made. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Habitats Directive (92/43/EEC) | <ul style="list-style-type: none"> Promote the preservation, protection and improvement of the quality of the environment, including the conservation of natural habitats and of wild fauna and flora. Contribute towards ensuring biodiversity through the conservation of natural habitats and of wild fauna and flora. Maintain or restore to favourable conservation status, natural habitats and species of wild fauna and flora of community interest. | <ul style="list-style-type: none"> Propose and protect sites of importance to habitats, plant and animal species. Establish a network of European sites hosting the natural habitat types listed in Annex I and habitats of the species listed in Annex II, to enable the natural habitat types and the species' habitats concerned to be maintained or, where appropriate, restored at a favourable conservation status in their natural range. Carry out comprehensive assessment of habitat types and species present. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

|--|--|--|---|
| EU Renewables Directive (2009/28/EC) | <ul style="list-style-type: none"> The Renewable Energy Directive establishes an overall policy for the production and promotion of energy from renewable sources in the EU. It requires the EU to fulfil at least 20% of its total energy needs with renewables by 2020 – to be achieved through the attainment of individual national targets. All EU countries must also ensure that at least 10% of their transport fuels come from renewable sources by 2020. | <ul style="list-style-type: none"> The Directive promotes cooperation amongst EU countries (and with countries outside the EU) to help them meet their renewable energy targets. The Directive specifies national renewable energy targets for each country, taking into account its starting point and overall potential for renewables. EU countries set out how they plan to meet these targets and the general course of their renewable energy policy in national renewable energy action plans. Progress towards national targets is measured every two years when EU countries publish national renewable energy progress reports. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Indirect Land Use Change Directive (2012/0288(COD)) | <ul style="list-style-type: none"> Article 3(4) of Directive 2009/28/EC of the European Parliament and of the Council (3) requires Member States to ensure that the share of energy from renewable energy sources in all forms of transport in 2020 is at least 10 % of their final energy consumption. The blending of biofuels is one of the methods available for Member States to meet this target, and is expected to be the main contributor. Other methods available to meet the target are the reduction of energy consumption, which is imperative because a mandatory percentage target for energy from renewable sources is likely to become increasingly difficult to achieve sustainably if overall demand for energy for transport continues to rise, and the use of electricity from renewable energy sources. | <ul style="list-style-type: none"> Limit the contribution that conventional biofuels (with a risk of ILUC emissions) make towards attainment of the targets in the Renewable Energy Directive; Improve the greenhouse gas performance of biofuel production processes (reducing associated emissions) by raising the greenhouse gas saving threshold for new installations subject to protecting installations already in operation on 1st July 2014; Encourage a greater market penetration of advanced (low-ILUC) biofuels by allowing such fuels to contribute more to the targets in the Renewable Energy Directive than conventional biofuels; Improve the reporting of greenhouse gas emissions by obliging Member States and fuel suppliers to report the estimated indirect land-use change emissions of biofuels. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Alternative Fuels Infrastructure Directive (2014/94/EU) | <ul style="list-style-type: none"> This Directive establishes a common framework of measures for the deployment of alternative fuels infrastructure in the Union in order to minimise dependence on oil and to mitigate the environmental impact of transport. | <ul style="list-style-type: none"> This Directive sets out minimum requirements for the building-up of alternative fuels infrastructure, including recharging points for electric vehicles and refuelling points for natural gas (LNG and CNG) and hydrogen, to be implemented by means of Member States' national policy frameworks, as well as common technical specifications for such recharging and refuelling points, and user information requirements. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| EU Energy Efficiency Directive (2012/27/EU) | <ul style="list-style-type: none"> Establishes a set of binding measures to help the EU reach its 20% energy efficiency target by 2020. Under the Directive, all EU countries are required to use energy more efficiently at all stages of the energy chain, from production to final consumption. | <ul style="list-style-type: none"> Energy distributors or retail energy sales companies have to achieve 1.5% energy savings per year through the implementation of energy efficiency measures EU countries can opt to achieve the same level of savings through other means, such as improving the efficiency of heating systems, installing double glazed windows or insulating roofs The public sector in EU countries should purchase energy efficient buildings, products and services Every year, governments in EU countries must carry out energy efficient renovations on at least 3% (by floor area) of the buildings they own and occupy | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

| | <p>within the framework of public action, to sustain and transmit to future generations.</p> | <ul style="list-style-type: none"> Take the necessary steps to apply the provisions of this Convention concerning the role of cultural heritage in the construction of a peaceful and democratic society. Greater synergy of competencies among all the public, institutional and private actors concerned. | |
| <p>European Landscape Convention 2000</p> | <ul style="list-style-type: none"> The developments in agriculture, forestry, industrial and mineral production techniques, together with the practices followed in town and country planning, transport, networks, tourism and recreation, and at a more general level, changes in the world economy, have in many cases accelerated the transformation of landscapes. The Convention expresses a concern to achieve sustainable development based on a balanced and harmonious relationship between social needs, economic activity and the environment. It aims to respond to the public's wish to enjoy high quality landscapes. | <ul style="list-style-type: none"> Promote protection, management and planning of landscapes. Organise European co-operation on landscape issues. | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |
| <p>The Seventh Environmental Action Programme (EAP) of the European Community (2013-2020)</p> | <p>It identifies three key objectives:</p> <ul style="list-style-type: none"> to protect, conserve and enhance the Union's natural capital to turn the Union into a resource-efficient, green, and competitive low-carbon economy to safeguard the Union's citizens from environment-related pressures and risks to health and wellbeing | <p>Four so called "enablers" will help Europe deliver on these objectives (goals):</p> <ul style="list-style-type: none"> Better implementation of legislation. Better information by improving the knowledge base. More and wiser investment for environment and climate policy. Full integration of environmental requirements and considerations into other policies. <p>Two additional horizontal priority objectives complete the programme:</p> <ul style="list-style-type: none"> To make the Union's cities more sustainable. To help the Union address international environmental and climate challenges more effectively. | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |
| <p>Bern Convention (Convention on the Conservation of European Wildlife and Natural Habitats)</p> | <p>The convention has three main aims:</p> <ul style="list-style-type: none"> to conserve wild flora and fauna and their natural habitats to promote cooperation between states to give particular attention to endangered and vulnerable species including endangered and vulnerable migratory species | <p>The Parties under the convention recognise the intrinsic value of nature, which needs to be preserved and passed to future generations, they also:</p> <ul style="list-style-type: none"> Seek to ensure the conservation of nature in their countries, paying particular attention to planning and development policies and pollution control. Look at implementing the Bern Convention in central Eastern Europe and the Caucus. Take account of the potential impact on natural heritage by other policies. Promote education and information of the public, ensuring the need to conserve species is understood and acted upon. Develop an extensive number of species action plans, codes of conducts, and guidelines, at their own initiative or in co-operation with other organisations. Created the Emerald Network, an ecological network made up of Areas of Special Conservation Interest. | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |

| River Basin Management Plan | <ul style="list-style-type: none"> River Basin Management Plans set out the measures planned to maintain and improve the status of waters. | <ul style="list-style-type: none"> Forest Genetic Reproductive Material Forest Management Plans Aim to protect and enhance all water bodies in the RBD and meet the environmental objectives outlined in Article 4 of the Water Framework Directive. Identify and manages water bodies in the RBD. Establish a programme of measures for monitoring and improving water quality in the RBD. Involve the public through consultations. | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |
| National Peatlands Strategy (2015-2025) | <p>This Strategy aims to provide a long-term framework within which all of the peatlands within the State can be managed responsibly in order to optimise their social, environmental and economic contribution to the well-being of this and future generations.</p> | <p>Objectives of the Strategy:</p> <ul style="list-style-type: none"> To give direction to Ireland’s approach to peatland management. To apply to all peatlands, including peat soils. To ensure that the relevant State authorities and state owned companies that influence such decisions contribute to meeting cross-cutting objectives and obligations in their policies and actions. To ensure that Ireland’s peatlands are sustainably managed so that their benefits can be enjoyed responsibly. To inform appropriate regulatory systems to facilitate good decision making in support of responsible use. To inform the provision of appropriate incentives, financial supports and disincentives where required. To provide a framework for determining and ensuring the most appropriate future use of cutover and cutaway bogs. <p>To ensure that specific actions necessary for the achievement of its objectives are clearly identified and delivered by those involved in or responsible for peatlands management or for decisions affecting their management.</p> | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |
| Flood Risk Management Plans arising from National Catchment Flood Risk Assessment and Management Programme | <ul style="list-style-type: none"> The national Catchment Flood Risk Assessment and Management (CFRAM) programme commenced in Ireland in 2011 and is being overseen by the Office of Public Works. The CFRAM Programme is intended to deliver on core components of the National Flood Policy, adopted in 2004, and on the requirements of the EU Floods Directive. | <p>CFRAM Studies have been undertaken for all River Basin Districts. The studies are focusing on areas known to have experienced flooding in the past and areas that may be subject to flooding in the future either due to development pressures or climate change. Flood Risk and Hazard mapping, including Flood Extent Mapping, was finalised in 2017. The final outputs from the studies are the CFRAM Plans, finalised in 2018. The Plans define the current and future flood risk in the River Basin Districts and set out how this risk can be managed.</p> | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</p> |
| Draft National Bioenergy Plan 2014 - 2020 | <p>The Draft Bioenergy Plan sets out a vision as follows:</p> <ul style="list-style-type: none"> Bioenergy resources contributing to economic development and sustainable growth, generating jobs for citizens, supported by coherent policy, planning and regulation, and managed in an integrated manner. | <p>Three high level goals, of equal importance, based on the concept of sustainable development are identified:</p> <ul style="list-style-type: none"> To harness the market opportunities presented by bioenergy in order to achieve economic development, growth and jobs. To increase awareness of the value, opportunities and societal benefits of developing bioenergy. | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the</p> |

| <p>Wild Atlantic Way Operational Programme 2015-2019</p> | <p>The vision for the Wild Atlantic Way brand is: To create a world class, sustainable and un-missable experience brand that engages and energises the visitor so that they become powerful advocates and leaves them wanting to return for more.</p> | <p>The goals and outcomes of the Wild Atlantic Way are presented here under the headings of the 'VICE' model, a recognised tourism model for sustainable development and which considers the four key and interdependent elements of Visitor, Industry, Community and Environment.</p> <ul style="list-style-type: none"> • To ensure that the Wild Atlantic Way brand is compelling to our target market segments and that the Wild Atlantic Way itself becomes a world-class visitor experience. • To ensure that the Wild Atlantic Way delivers balanced and sustainable revenue and jobs growth with greater geographic and seasonal spread • To ensure that the Wild Atlantic Way delivers benefits to local communities in the west of Ireland and contributes to a better place to live for everyone. <p>To ensure that the implementation of the Wild Atlantic Way Operational Programme facilitates the protection and enhancement of the environment of the west of Ireland – as the fundamental asset that is the basis of the Wild Atlantic Way – in association with other key stakeholders.</p> | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection.</p> |
| <p>Fáilte Ireland plans, strategies etc. relating to the Wild Atlantic Way, Ireland's Ancient East or other brands or initiatives</p> | <p>Fáilte Ireland's work includes preparing various plans and strategies for the Wild Atlantic Way, Ireland's Ancient East and other brands and initiatives. These plans are subject to their own environmental assessment processes and any project arising is required to be consistent with and conform with the provisions of all adopted/approved Statutory Policies, Strategies, Plans and Programmes, including provisions for the protection and management of the environment.</p> | <p>Some of Fáilte Ireland's plans and strategies include various projects relating to land use and infrastructural development, including those relating to development of land or on land and the carrying out of land use activities. Many of these projects exist already while some are not currently in existence.</p> <p>The Statutory Policies, Strategies, Plans and Programmes that provide for different projects undergo a variety of environmental assessments. These assessments ensure that environmental effects are considered, including: those arising from new and intensified uses and activities; and those arising from various sectors such as tourism.</p> | <p>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection.</p> |
