Glossary

Appropriate Assessment

The obligation to undertake Appropriate Assessment derives from Article 6(3) and 6(4) of the Habitats Directive 92/43/EEC. AA is a focused and detailed impact assessment of the implications of a strategic action (such as a plan or programme) or project, alone and in combination with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.

Biodiversity and Flora and Fauna

Biodiversity is the variability among living organisms from all sources including inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems’ (United Nations Convention on Biological Diversity 1992).

Flora is all of the plants found in a given area.

Fauna is all of the animals found in a given area.

Environmental Problems

Annex I of Directive 2001/42/EC of the European Parliament and of the Council of Ministers, of 27th June 2001, on the assessment of the effects of certain Plans and programmes on the environment (the Strategic Environmental Assessment Directive) requires that information is provided on 'any existing environmental problems which are relevant to the plan or programme', thus, helping to ensure that the proposed strategic action does not make existing environmental problems worse.

Environmental problems arise where there is a conflict between current environmental conditions and ideal targets. If environmental problems are identified at the outset they can help focus attention on important issues and geographical areas where environmental effects of the plan or programme may be likely.

Environmental Vectors

Environmental vectors are environmental components, such as air, water or soil, through which contaminants or pollutants, which have the potential to cause harm, can be transported so that they come into contact with human beings.

Mitigate

To make or become less severe or harsh.

Mitigation Measures

Mitigation measures are measures envisaged to prevent, reduce and, as fully as possible, offset any significant adverse impacts on the environment of implementing a human action, be it a plan, programme or project. Mitigation involves ameliorating significant negative effects. Where there are significant negative effects, consideration should be given in the first instance to preventing such effects or, where this is not possible, to lessening or offsetting those effects. Mitigation measures can be roughly divided into those that: avoid effects; reduce the magnitude or extent, probability and/or severity of effects; repair effects after they have occurred; and compensate for effects, balancing out negative impacts with other positive ones.
Protected Structure

Protected Structure is the term used in the Planning and Development Act and Regulations (as amended) to define a structure included by a planning authority in its Record of Protected Structures. Such a structure shall not be altered or demolished in whole or part without obtaining planning permission or confirmation from the planning authority that the part of the structure to be altered is not protected.

Recorded Monument

A monument included in the list and marked on the map that comprises the Record of Monuments and Places that is set out county by county under Section 12 of the National Monuments (Amendment) Act, 1994 by the Archaeological Survey of Ireland. The definition includes Zones of Archaeological Potential in towns and all other monuments of archaeological interest that have so far been identified. Any works at or in relation to a recorded monument requires two months’ notice to the former Department of the Environment, Heritage and Local Government (now Department of Culture, Heritage and the Gaeltacht) under Section 12 of the National Monuments (Amendment) Act, 1994.

Scoping

Scoping is the process of determining what issues are to be addressed, and setting out a methodology in which to address them in a structured manner appropriate to the plan or programme. Scoping is carried out in consultation with appropriate environmental authorities.

Strategic Actions

Strategic actions include Policies/Strategies, which may be considered as inspiration and guidance for action and which set the framework for Plans and programmes; Plans, sets of co-ordinated and timed objectives for the implementation of the policy; and Programmes, sets of projects in a particular area.

Strategic Environmental Assessment (SEA)

Strategic Environmental Assessment (SEA) is the formal, systematic evaluation of the likely significant environmental effects of implementing a plan or programme before a decision is made to adopt it.

Strategic Environmental Objective (SEO)

Strategic Environmental Objectives (SEOs) are methodological measures developed from policies which generally govern environmental protection objectives established at international, Community or Member State level and are used as standards against which the provisions of the Plan and the alternatives can be evaluated in order to help identify which provisions would be likely to result in significant environmental effects and where such effects would be likely to occur, if - in the case of adverse effects - unmitigated.
Section 1  SEA Introduction and Background

1.1 Introduction and Terms of Reference

This is the Strategic Environmental Assessment (SEA) Environmental Report for the Dublin Docklands Visitor Experience Development Plan (hereafter referred to as the Plan). It has been undertaken by CAAS Ltd. on behalf of Fáilte Ireland.

1.2 SEA Definition

Environmental assessment is a procedure that ensures that the environmental implications of decisions are taken into account before such decisions are made. Environmental Impact Assessment, or EIA, is generally used for describing the process of environmental assessment for individual projects, while Strategic Environmental Assessment or SEA is the term that has been given to the environmental assessment of plans and programmes, which help determine the nature and location of individual projects taking place. SEA is a systematic process of predicting and evaluating the likely significant environmental effects of implementing a proposed plan or programme, in order to ensure that these effects are adequately addressed at the earliest appropriate stages of decision-making in tandem with economic, social and other considerations.

1.3 SEA Directive and its transposition into Irish Law

Directive 2001/42/EC of the European Parliament and of the Council of Ministers, of 27th June 2001, on the Assessment of the Effects of Certain Plans and Programmes on the Environment, referred to hereafter as the SEA Directive, introduced the requirement that SEA be carried out on plans and programmes which are prepared for a number of sectors, including tourism.

The SEA Directive was transposed into Irish Law through the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (Statutory Instrument Number (SI No. 435 of 2004) and the Planning and Development (Strategic Environmental Assessment) Regulations 2004 (SI No. 436 of 2004). Both sets of Regulations became operational on 21st July 2004. The Regulations have been amended by the European Communities (Environmental Assessment of Certain Plans and Programmes) (Amendment) Regulations 2011 (SI No. 200 of 2011) and the Planning and Development (Strategic Environmental Assessment) (Amendment) Regulations 2011 (SI No. 201 of 2011).

1.4 Implications for the Plan

Article 3 para. 2 of the SEA Directive, introduced the requirement that SEA be carried out on plans and programmes, or modifications to these:

a) which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to the EIA Directive1, or

b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of the Habitats Directive2 i.e. the Directive requires that SEA is undertaken where Stage 2 Appropriate Assessment (AA)3 is being undertaken on plans, programmes etc.

---

1 Directive 2011/92/EU of the European Parliament and of the Council of 13 December 2011, on the assessment of the effects of certain public and private projects on the environment (codification)
3AA is provided for by the Habitats Directive and is a focused and detailed impact assessment of the implications of a strategic action or project, alone and in combination with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.
The tourism sector Plan does not contribute towards the framework for future development consent of projects listed in Annexes I and II to the EIA Directive and does not contain provisions or define rules that must be complied with when administrative consent of other projects is being granted.

The Plan does, however, fall under the definition of a “plan” contained within the Birds and Natural Habitats Regulations 2011 (as amended) and therefore must be screened for the need to undertake AA. The Screening for AA has found that the Plan has the potential, if unmitigated, to affect the ecological integrity of European Sites and that measures to ensure that potential effects are avoided are required. Taking into account the requirements of the Habitats Directive and recent case law (including, European Court of Justice Judgement C323-17), Stage 2 AA was therefore be carried out for the Plan. As Stage 2 AA has been undertaken on the Plan, SEA was also undertaken - see requirement at b) above. An SEA Determination is provided at Appendix I.

This SEA Environmental Report provides the findings of the SEA and should be read in conjunction with the Plan. This report will be placed on public display and may be altered in order to take account of recommendations contained in submissions. Fáilte Ireland has taken into account the findings of this report and other related SEA output during their consideration of the Plan and before it is finalised. On finalisation of the Plan, an SEA Statement has been prepared which summarises, inter alia, how environmental considerations have been integrated into the Plan.
Section 2  The Plan

2.1  Overview

The **focus** of the Dublin Docklands Visitor Experience Development Plan (VEDP) is on creating a strongly integrated tourism proposition for the area.

The structure of the Plan is based around the **Destination Promise** and two **Experience Development Themes**. The Experience Development Themes provide the basis for a coherent industry approach to experience development. The themes have been developed to deliver a consistent destination narrative to be applied to local experience development and influence future ‘product’ development.

The **Destination Promise** is:

“Explore the energy of the Docklands canals, river and port where history, the pulse of innovation and generations of creativity create the daily vibe in Dublin’s urban village.”

The **Experience Development Themes** are:

1. **Water** - Dockland Waters, Dublin’s Maritime Tapestry
   “From the port, river to the canals, the Docklands has played a historical role in almost every facet of Irish life and the major events that have shaped the country. The visitor will explore the heritage of the Docklands area and the richness of local stories told by the locals. The Port and the Docklands waters provide the backdrop for innovative engagement with these stories delivered on the water or by the waterside.”

2. **Innovation** - Local Traders, Global Traders
   The Docklands’ has always been Ireland’s innovation district. From the pioneers of international maritime trade to global tech giants, it is a neighbourhood of innovation and creativity. Innovation must become an expected experience component within a destination that each day challenges traditional ways of doing things.

The opportunity to further enhance each of these two themes is supported by a series of **experience development recommendations**, some of which are **Catalyst Projects**. The Plan includes **10 Catalyst Projects**, projects designed to be transformative for the destination and motivating for the international visitor. Many of these are already in planning or feasibility phase and will be supported by the Plan. They are as follows (these are accompanied by specific **Actions** in Appendix I “Delivering the Plan”):

- Development of the Custom House Visitor Centre
- CHQ Irish Food Market
- Assess the feasibility of establishing a White Water Rafting / Water Centre at George’s Dock
- Assess the feasibility of the development of the Port Line and Dublin Port Odlum’s Quarter
- Docklands WaterLine
- Iconic Docklands Gateways
- Increase Water Animation on the Liffey
- Grand Canals Docks Floating Markets
- Trinity’s Innovation Campus
- Techplex delivering Technology / Science Innovation

**Other, Supporting Experience Development Recommendations** are provided under each of the Plan’s two themes, Water and Innovation. These are supported by Experience Development Projects in Appendix I “Delivering the Plan”.

**Destination Enabling Initiatives** are projects that will enhance the broader tourism infrastructure enabling the Docklands to build its existing tourism base. This will be through collaboration, product development, adoption of a consistent narrative and enhancing the area as a visitor destination. These also represent destination differentiators, leveraging the culture and heritage of the Docklands. **Destination Enabling Initiatives** identified by the Plan are as follows (these are accompanied by specific **Actions** in Appendix I “Delivering the Plan”):

- VEDP Management: The creation of the structures that will support the implementation of the Docklands VEDP.
- Tourism Social Responsibility: Harness the potential of the commercial base within the Docklands to create a social responsibility project with tourism outputs through local community investment.
- Tourism Industry Network: The creation of a formal tourism industry network to become the focal point for sustained collaboration and destination development.
- Destination Festivals and Events: The creation of the internationally appealing festivals and events that contribute to the placemaking of the Docklands.
- Arts and Culture Focus: The enhancement of the current level of provision in arts and culture and build on the existing heritage of arts and culture across the destination.
- Added Value Focus: The creation of a focus around the evening economy to develop tourism opportunities to capitalise on the volume of
business tourists staying within the destination during the week.

- Technology and Living History: The creation of a system to review the incorporation of technology to bring alive the living history stories of the Docklands in an interesting way for visitors.
- Urban Adventure Hub: The positioning of Docklands as the base for all urban adventure that supports existing activity and promotes new enterprise development through the adventure theme.
- Destination Visitor Orientation: The creation of a sense of destination throughout the Docklands linking both sides of the River Liffey, fostering and encouraging increased levels of visitor flows between both sides of the river.
- Evening Economic Innovation: Develop the evening economy proposition across the Docklands to attract and retain visitors into the destination in the evening time.
- Water Animation: The creation of activity on the River Liffey and the Grand Canal that will act as a catalyst for further engagement with the water and contribute to the Urban Adventure theme.

The Plan identifies the following **Hero Products**, projects that exist currently that represent ‘hero’ products possess the capacity to attract increased visitor numbers into the destination:

**Water Theme**

- EPIC at CHQ
- Custom House Visitor Centre
- Jeanie Johnston
- Dublin Bay Cruises
- Dublin Discovered Boat Tour
- Dublin City Kayaking
- Viking Splash Tours
- 3 Arena
- Bord Gáis Energy Theatre
- Dublin Convention Centre
- Wakeboarding & SUP in Grand Canal Dock

**Innovation Theme**

- 3 Arena
- Bord Gáis Energy Theatre
- Lir Academy
- EPIC

In addition to providing further detail regarding Catalyst Projects, Supporting Experience Development Recommendations and Destination Enabling Initiatives Appendix I identifies a number of **Destination Projects** under the headings of "Destination Festivals and Events", "Destination Arts and Culture" and "Destination Visitor Orientation".

### 2.2 Relationship with other relevant Plans and Programmes

The Plan sits within a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These documents include plans and programmes such as those detailed in Appendix II (see also, Section 4 “Environmental Baseline”, Section 5 “Strategic Environmental Objectives”, Section 6 “Description of Alternatives and Section 9 “Mitigation Measures”). These documents have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSESs) and lower tier Development Plans and Local Area Plans. The Eastern and Midlands RSES sets out objectives relating tourism development that have been subject to environmental assessment. The RSES will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSESs and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.
Section 3  SEA Methodology

3.1  Introduction to the Iterative Approach

Figure 3.1 provides an overview of the integrated Plan preparation, SEA and Appropriate Assessment (AA) processes. The preparation of the Plan, SEA and AA have taken place concurrently and the findings of the SEA and AA have informed the Plan.

![Figure 3.1 Overview of the SEA/AA/Plan-preparation Processes](image)

The Draft Plan

The Draft Plan, SEA and AA documents were drafted in an iterative manner, whereby multiple revisions of each document are prepared, each informing subsequent iterations of others.

Process

- Preparation of the Plan began
- European SEA and Habitats Directives and transposing Regulations require SEA and AA to be undertaken
- SEA Scoping Process (including consultations with Environmental Authorities) was carried out
- Prediction, Evaluation and Mitigation of Environmental Impacts

Outputs

- SEA Scoping Report
- The Draft Plan
  - SEA Environmental Report
  - AA document
- Public Consultation on the Draft Plan, SEA Environmental Report and AA document
- Respond to Submissions and revise the Draft Plan
- Finalise AA and Prepare SEA Statement to accompany the Plan
- Implementation of the Plan alongside the separate, existing planning framework for administrative consent
- Public Consultation Report
- SEA Statement
- Funding of projects that are consented through the separate, existing planning framework
3.2 Appropriate Assessment and Integrated Biodiversity Impact Assessment

3.2.1 Appropriate Assessment

Stage 2 Appropriate Assessment (AA) has been undertaken alongside preparation of the Plan. The requirement for AA is provided under the EU Habitats Directive (Directive 1992/43/EEC).

The conclusion of the AA is that the Plan will not affect the integrity of the European Sites, alone or in combination with other plans or projects.

The preparation of the Plan, SEA and AA has taken place concurrently and the findings of the AA have informed the SEA.

3.2.2 Integrated Biodiversity Impact Assessment

Many elements of Integrated Biodiversity Impact Assessment as detailed in the EPA’s (2013) Practitioner’s Manual have been aligned with in the undertaking of the SEA for the Plan. These include:

Scoping
- Biodiversity-relevant issues were identified for consideration at scoping stage and these are now detailed in Section 4.
- Reference to a zone of influence is provided at Section 4.

Baseline
- Biodiversity data sources relevant for this local level assessment have been identified and datasets collated/gathered.
- The biodiversity baseline addresses designated sites and other habitats and species of ecological value.
- AA information has been incorporated into the SEA baseline.

Alternatives
- Impacts upon biodiversity are considered under each of the alternatives and potential conflicts can be mitigated.

Impact assessment
- Effects on biodiversity are identified and assessed and the AA considers the interrelationship between biodiversity and potential effects on European Sites.

Mitigation and monitoring
- Taking into account all measures contained within the Plan, all the proposed mitigation measures deriving from the various processes were generally consistent and compatible.
- Indicators and associated targets have been included in SEA for monitoring European Sites.

Reporting
- This SEA ER addresses all biodiversity-related considerations relevant for this level of assessment.
- This SEA ER contains all biodiversity-relevant information, data, figures and maps relevant for this level of assessment.
- This SEA ER has been informed by the AA findings.

Communication and consultation
- Submissions received have been taken on board.
- The preparation of the Plan, SEA and AA have taken place concurrently and the findings of the AA have informed the SEA.

3.3 Scoping

3.3.1 Introduction

The scope of environmental issues to be dealt with by the SEA together with the level of detail to which they are addressed was broadly decided upon taking into account the collection of environmental baseline data and input from environmental authorities. Scoping allowed the SEA to become focused upon key issues relevant to the environmental components that are specified under the SEA Directive.6

As the Plan is not likely to have significant effects on the environment in another Member State, transboundary consultations as provided for by Article 7 of the SEA Directive were not undertaken.

3.3.2 Scoping Notices

Relevant environmental authorities identified under the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations, as amended, were sent SEA scoping notices by Fáilte Ireland indicating that submissions or observations in

---

4 These components comprise biodiversity, fauna, flora, population, human health, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors.

5 The following authorities were notified: The Environmental Protection Agency, the Department of Communications, Climate Action and Environment, the Department of Agriculture, Food and the Marine and the Department of Culture, Heritage and the Gaeltacht.
relation to the scope and level of detail of the information to be included in the environmental report could be made to Fáilte Ireland.

### 3.3.3 Scoping Submissions

Submissions from the following environmental authorities were made during the SEA Scoping process:

- Environmental Protection Agency;
- Department of Agriculture, Food and Marine; and
- Department of Communication, Climate Action and Environment.

These submissions were taken into account during preparation of the SEA and informed the various SEA recommendations that have been integrated into the Plan (see Section 9).

### 3.4 Alternatives

The SEA Directive requires that reasonable alternatives (taking into account the objectives and the geographical scope of the plan or programme) are identified, described and evaluated for their likely significant effects on the environment. In accordance with this requirement, alternatives for the Plan are examined in Section 7.

### 3.5 Environmental Report

In this SEA Environmental Report, an earlier version of which was placed on public display alongside the Plan, the likely environmental effects of the Plan and the alternatives are predicted and their significance evaluated.

The Environmental Report provides Fáilte Ireland, stakeholders and the public with a clear understanding of the likely environmental consequences of implementing the Plan.

Mitigation measures to prevent or reduce significant adverse effects posed by the Plan are identified in Section 9 - these have been integrated into the Plan.

This Environmental Report has been updated in order to take account of recommendations contained in submissions and in order to take account of changes that were made to the original, Draft Plan that was placed on public display. Updates to the Draft Plan did not provide for any uses, works or activities and were not considered to be material. Consequently, they did not require further, detailed SEA or AA consideration.

This Environmental Report contains the information specified in Schedule 2 of the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (SI No. 435 of 2004) as amended (see Table 3.1).

### 3.6 The SEA Statement

On finalisation of the Plan by Fáilte Ireland, an SEA Statement has been prepared that includes information on:

- How environmental considerations have been integrated into the Plan, highlighting the main changes to the Plan that resulted from the SEA process;
- How the SEA Environmental Report and consultations have been taken into account, summarising the key issues raised in consultations and in the Environmental Report indicating what action was taken in response;
- The reasons for choosing the Plan in the light of the other alternatives, identifying the other alternatives considered, commenting on their potential effects and explaining why the Plan as adopted was selected; and
- The measures decided upon to monitor the significant environmental effects of implementing of the Plan.

### 3.7 Difficulties Encountered

No significant difficulties were encountered in undertaking the assessment.

Section 4  Environmental Baseline

4.1  Introduction

Reflecting the specifications in the SEA Directive, the relevant aspects of the current state of the environment for the following environmental components are identified in this section:

- Biodiversity, Flora and Fauna;
- Population and Human Health;
- Material Assets;
- Water;
- Air and Climatic Factors;
- Landscape;
- Cultural Heritage;
- Soil; and
- The interrelationship between the above factors.

Information which is relevant to planning and project development and associated environmental assessments and administrative consent of projects is identified (note that Article 5 of the SEA Directive, in accordance with the established European principle of subsidiarity, requires that the Environmental Report includes the information that may reasonably be required taking into account, inter alia, the extent to which certain matters are more appropriately assessed at different levels in that process in order to avoid duplication of the assessment).

4.2  Geographical Scope of the Assessment

The area to which the Plan relates covers part of the Dublin Docklands in the Dublin City.

4.3  National Reporting on the Environment

The EPA’s “Ireland’s Environment - An Assessment 2016” report provides an integrated assessment of the overall quality of Ireland’s environment, the pressures being placed on it and the societal responses to current and emerging environmental issues. This report has informed various parts of the environmental baseline provided below. The key environmental challenges or messages identified by the report are:

- **Environment and Health and Wellbeing**
  Recognising the benefits of a good quality environment to health and wellbeing.

- **Climate Change**
  Accelerating mitigation actions to reduce greenhouse gas emissions and implement adaptation measures to increase resilience in dealing with adverse climate impacts.

- **Implementation of Legislation**
  Improving the tracking of plans and policies and the implementation and enforcement of environmental legislation to protect the environment.

- **Restore and Protect Water Quality**
  Implementing measures that achieve ongoing improvement in the environmental status of water bodies from source to the sea.

- **Sustainable Economic Activities**
  Integrating environmental sustainability ideas and performance accounting across economic sectors and sectoral plans should be a key policy for growth.

- **Nature and Wild Places**
  Protecting pristine and wild places that act as biodiversity hubs, contributing to health and wellbeing, and providing tourism opportunities.

- **Community Engagement**
  Informing, engaging and supporting communities in the protection and improvement of the environment.

The report highlights that high-quality green and blue spaces are not just for nature but are for peoples’ health and wellbeing, particularly in the context of an increasingly urban society and increasing settlement densities.

4.4  Sustainable Development Goals

Implementation of the Plan will contribute towards efforts to achieve a number of the 17 Sustainable Development Goals of the 2030 Agenda for Sustainable Development, which were adopted by world leaders in 2015 at a United Nations Summit and came into force in 2016. These Goals include:

- Goal 3. Ensure healthy lives and promote well-being for all at all ages.
- Goal 6. Ensure availability and sustainable management of water and sanitation for all.
Goal 7. Ensure access to affordable, reliable, sustainable and modern energy for all.
Goal 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.
Goal 9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.
Goal 11. Make cities and human settlements inclusive, safe, resilient and sustainable.
Goal 12. Ensure sustainable consumption and production patterns.
Goal 13. Take urgent action to combat climate change and its impacts.
Goal 15. Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

4.5 Likely Evolution of the Environment in the Absence of the Plan

The likely evolution of the environment in the absence of a plan would resemble the environmental effects that are described for Alternative 1 (Business as Usual) under Section 7.
4.6 Biodiversity and Flora and Fauna

4.6.1 Overview

Information on biodiversity and flora and fauna which is relevant to project planning and development and associated environmental assessment and administrative consent of projects includes available information on designated ecological sites and protected species, ecological connectivity (including stepping stones and corridors) and non-designated habitats.

Ecological designations include:

- Special Areas of Conservation\(^6\) (SACs) and Special Protection Areas\(^7\) (SPAs);
- Proposed Natural Heritage Areas (pNHAs)\(^8\);
- Nature Reserves;
- Ramsar Sites\(^9\);
- Marine Protected Areas (MPAs)\(^10\);
- UNESCO Biosphere Reserve\(^11\);
- Shellfish Waters\(^12\);
- Flora Protection Order\(^13\) sites;
- Certain entries to the Water Framework Directive Register of Protected Areas\(^14\);
- Wildfowl Sanctuaries (see S.I. 192 of 1979)\(^15\);
- Tree Preservation Orders (TPOs)\(^16\);
- Ecological connectivity and networks;
- EPA Ecological Network Classes\(^17\);
- CORINE Landcover\(^18\);
- Watercourses, wetlands and peatlands; and
- Other sites of high biodiversity value or ecological importance, e.g. BirdWatch Ireland’s ‘Important Bird Areas’.

---

\(^ {6} \) SACs have been selected for protection under the European Council Directive on the conservation of natural habitats and of wild flora and fauna (92/43/EEC) by the DECLG due to their conservation value for habitats and species of importance in the European Union. The Habitats Directive seeks to establish Natura 2000, a network of protected areas throughout the EU. It is the responsibility of each member state to designate SACs to protect habitats and species, which, together with the SPAs designated under the 1979 Birds Directive, form Natura 2000.

\(^ {7} \) SPAs have been selected for protection under the 1979 European Council Directive on the Conservation of Wild Birds (79/409/EEC) - referred to as the Birds Directive - by the DECLG due to their conservation value for birds of importance in the European Union.

\(^ {8} \) pNHAs were published on a non-statutory basis in 1995, but have not since been statutorily proposed or designated. These sites are of significance for wildlife and habitats.

\(^ {9} \) Ramsar Sites are designated and protected under the Convention of Wetlands of International Importance, especially as Water Fowl Habitat, which was established at Ramsar in 1971 and ratified by Ireland in 1984. Ireland presently has 45 sites designated as Wetlands of International Importance, with surface areas of 66,994 hectares. The objective of a Ramsar site is the conservation of wetlands for wildfowl. While Ireland ratified the Ramsar Convention in 1984 there is no legal backing for Ramsar sites unless they are also Nature Reserves or SPAs and as such are protected by the Wildlife Acts 1976 and 2000 or the Birds or Habitats Directives.

\(^ {10} \) Under the OSPAR Convention to Protect the Marine Environment of the North East Atlantic, Ireland committed to establishing marine protected areas to protect biodiversity (OSPAR MPAs). Ireland established a number of its cSAPs as OSPAR MPAs for marine habitats. There are two OSPAR MPAs adjacent to the Dublin Docklands: North Dublin Bay OSPAR MPA and Maharee Estuary OSPAR MPA.

\(^ {11} \) The Dublin Bay United Nations Educational, Scientific and Cultural Organisation (UNESCO) Biosphere Reserve in North Bull Island was designated as a Biosphere Reserve in 1981 because of its rare and internationally important habitats and wildlife and the designation was extended to the wider Dublin Bay in 2015, reflecting the Bay’s significant environmental, economic, cultural and tourism importance, and extends to over 300 km\(^2\). Over 300,000 people live within the Biosphere.

\(^ {12} \) In order to protect existing shellfish waters and to ensure the future protection of these areas, the European Union introduced the Shellfish Waters Directive (2006/113/EC). The purpose of this Directive is to put in place concrete measures to protect waters, including shellfish waters, against pollution and to safeguard certain shellfish populations from various harmful consequences, resulting from the discharge of pollutant substances into the sea. The Directive applies to the aquatic habitat of bivalve and gastropod molluscs only (includes oysters, mussels, cockles, scallops and clams). It does not include crustaceans such as lobsters, crabs and crayfish.

\(^ {13} \) The current list of plant species protected by Section 21 of the Wildlife Act, 1976 is set out in the Flora (Protection) Order, 1999.

\(^ {14} \) In response to the requirements of the Water Framework Directive a number of water bodies or parts of water bodies which must have extra controls on their quality by virtue of how their waters are used by wildlife have been listed on Registers of Protected Areas (RPAs). RPAs include those for Protected Habitats or Species, Shellfish, Salmonid, Nutrient Sensitive Areas, Recreational Waters and Drinking Water.

\(^ {15} \) Wildfowl Sanctuaries are areas that have been excluded from the ‘Open Season Order’ so that game birds can rest and feed undisturbed. There are 68 sanctuaries in the State. Shooting of game birds is not allowed in these sanctuaries.

\(^ {16} \) TPOs are a planning mechanism whereby individual trees or groups of trees can be identified as important and protected by a TPO.

\(^ {17} \) This is an EPA dataset identifying a national spread of Ecological Network Classes which have been informed by CORINE land cover data. The study developed criteria to classify the relative importance of different areas within an Ecological Network. Five Classes of areas were defined on the basis of naturalness.

\(^ {18} \) Land cover is the observed physical cover, as seen from the ground or through remote sensing, including for example natural or planted vegetation, water and human constructions which cover the earth’s surface.
4.6.2 Key Ecological Sensitivities

Despite its location surrounded by a city, Dublin Bay is an internationally significant wildlife reserve, principally on account of wading birds that over-winter in the area. These birds have complex requirements that include feeding areas and areas to roost (rest) when the strands are covered by high tide. The shore areas and Irishtown Nature Park also contain locally significant bird and wildlife resources that have additional significance on account of their location at the heart of the City.

Key ecological sensitivities across Dublin Docklands include those relating to:

- Aquatic ecology associated with the Rivers Liffey, Dodder and Tolka and/or their estuaries;
- Coastal areas and marine waters in Dublin Bay and associated aquatic ecology of Dublin Bay; and
- Potential locations for bat roosts across the Docklands area, including in older or abandoned buildings and railway embankments.

A submission from the National Parks and Wildlife Service provided information on ecological sensitivities within the Docklands area:

- Bats use this area for foraging, despite extensive development and the sensitivity of bats to artificial lighting. Measures integrated into the Plan and the wider statutory planning/consent-granting framework will ensure that this sensitivity to lighting is taken into account in considering future proposals.
- Otters have been reported within and adjacent to the Plan area previously, including at the Grand Canal Basin. Measures integrated into the Plan and the wider statutory planning/consent-granting framework will ensure that species, including any otters that might be present, are taken into account in considering future proposals.
- Black guillemots, nests in the walls of Custom House Quay downstream of Sean O’Casey Bridge, near the Pigeon House Harbour and probably elsewhere.

A detached section of the South Dublin Bay and Tolka River Estuary SPA Tern Platform located in the Liffey channel off the Poolbeg peninsula and within the area covered by the Plan. This platform is utilised for nesting by several hundred pairs of common (mainly) and Arctic terns each year, both species included among the bird species of Special Conservation Interest for which this SPA has been designated. Smaller numbers of these tern species in addition nest on the Coal Delivery Ltd. Dolphin, a proposed Natural Heritage Area, also situated off Poolbeg. Several pairs of common terns nest as well annually on the bastion between the locks connecting the Grand Canal Basin with the Liffey-Dodder confluence.

4.6.3 Existing Fáilte Ireland Environmental Monitoring

Fáilte Ireland regularly engages with environmental research that is used to make informed management decisions and produce robust guidelines to facilitate the protection of the environment. From its inception in 2014, the Wild Atlantic Way (WAW) Operational Programme Monitoring Programme (undertaken to date by CAAS on behalf of Fáilte Ireland guided by relevant stakeholders) has been conducting research into the impacts of tourism on the receiving environment. To date the surveys have covered 43 sites and monitored the activities and effects of over 20,000 visitors to WAW discovery points.

This research characterises visitor movements at each site while examining the ecological features and sensitives present. A detailed assessment of the site facilities and management actions on site is also undertaken. From this data, impacts to ecological features are quantified in a systematic way and management recommendations are made. Over the first 4 years of the monitoring, the data has shown that visitors themselves cause low-level effects, and high-level effects are predominantly caused by the mismanagement of sites. As well as the site-specific data being collected, the monitoring program collates and interprets existing national environmental indicator data compiling the results into annual macro monitoring reports. The WAW monitoring research is guided by an independent working group that steers the research and develops the program as the data is collected. This working group comprises of
members from the EPA, NPWS, the Environmental Pillar and a representative from each of the County Councils along the WAW.

Each year the results are refined and published online in the form of Visitor Observation Reports, Ecological Impact Reports and the Macro Monitoring Reports. The reports are then dissected and detailed reports containing all relevant site-specific information are sent to each of the County Councils along the WAW; as well as any site management teams at sites not under the management of the County Council. This ensures that the research can be harnessed on site by those responsible while contributing towards informed management plans and guidelines created by Fáilte.

This extensive database demonstrates that over 85% of visitors observed at WAW discovery points are having low or no effects on the ecological features or processes at these sites. Ecological impacts observed comprise:

- Destruction of structures, vegetation or fauna;
- Trampling of herbaceous vegetation;
- Disturbance of wildlife;
- Heavy littering or dumping quantities of waste;
- Addition/alteration of site features, transient emissions, noise;
- Harvesting of large quantities of shells from beach sites;
- Fishing activities;
- Removal and throwing of large rocks; and
- Unrestricted dogs causing disturbances to wildlife.

It is assumed that visitor interactions within the area to which the Plan relates will be consistent

with the trends, activities and effects recorded in this dataset.

The Monitoring Programme has identified that dunes, machair, maritime grasslands and upland habitats such as heathlands are the most sensitive/vulnerable to visitor effects. Therefore, the management of visitor movements within these sensitive habitats is key for the avoidance of potential effects.

### 4.6.4 European Sites

Part of the Dublin Docklands, its coastline and its surrounding waters are designated as European Sites (see Section 4.6.4 below). European Sites comprise:

- Special Areas of Conservation\(^{19}\) (SACs), including candidate SACs; and
- Special Protection Areas\(^{20}\) (SPAs).

The SEA uses the same zone of influence cited in the AA; a 15 km buffer around the area to which the Plan relates (see sites within this zone listed on Table 4.1 and mapped on Figure 4.1). The AA review of all sites within this zone has allowed a determination to be made that in the absence of significant hydrological links the characteristics of the VEDP will not impose effects beyond the 15 km buffer.

There are number of SACs designated in the Docklands and wider Bay area, including North Dublin Bay SAC\(^ {21}\), South Dublin Bay SAC\(^ {22}\), Ballydow Bay SAC\(^ {23}\), Howth Head SAC\(^ {24}\) and Rockabill to Dalkey Island SAC\(^ {25}\).

There are number of SPAs designated in the Docklands and wider Bay area, including North

---

\(^{19}\) SACs have been selected for protection under the European Council Directive on the conservation of natural habitats and of wild fauna and flora (92/43/EEC) due to their conservation value for habitats and species of importance in the European Union. The Habitats Directive seeks to establish Natura 2000, a network of protected areas throughout the EU. It is the responsibility of each member state to designate SACs to protect habitats and species, which, together with the SPAs designated under the 1979 Birds Directive, form Natura 2000. The European Communities (Birds and Natural Habitats) Regulations 2011 consolidate the European Communities (Natural Habitats) Regulations 1997 to 2005 and the European Communities (Birds and Natural Habitats) (Control of Recreational Activities) Regulations 2010. The Regulations have been prepared to address several judgments of the Court of Justice of the European Union (CJEU) against Ireland, notably cases C-418/04 and C-183/05, in respect of failure to transpose elements of the Birds Directive and the Habitats Directive into Irish law.

\(^{20}\) SPAs have been selected for protection under the 1979 European Council Directive on the Conservation of Wild Birds (79/409/EEC) - referred to as the Birds Directive - due to their conservation value for birds of importance in the EU.

\(^{21}\) Sensitive features include: tidal mudflats and sandflats; Atlantic salt meadow; Mediterranean salt meadows; fixed dunes; maram dunes and peatland.

\(^{22}\) Sensitive features include: tidal mudflats and sandflats; annual vegetation of drift lines and embryonic shifting dunes.

\(^{23}\) Sensitive features include: tidal mudflats and sandflats; Salicornia mud; Atlantic salt meadows and Mediterranean salt meadows.

\(^{24}\) Sensitive features include: vegetated sea cliffs and dry heath.

\(^{25}\) Sensitive features include: reefs and harbour porpoise.
Bull Island SPA\textsuperscript{26}, Baldoyle Bay SPA\textsuperscript{27}, Ireland’s Eye SPA\textsuperscript{28}, Dalkey Island SPA\textsuperscript{29} and Howth Head Coast SPA\textsuperscript{30}.

For more detail on European Sites please refer to the AA document that accompanies the Plan and this SEA Environmental Report.

### 4.6.5 Natural Heritage Areas and Proposed Natural Heritage Areas

Natural Heritage Areas (NHAs) are designated due to their national conservation value for ecological and/or geological/geomorphological heritage. They cover nationally important semi-natural and natural habitats, landforms or geomorphological features, wildlife plant and animal species or a diversity of these natural attributes. NHAs are designated under the Wildlife (Amendment) Act 2000. Proposed NHAs (pNHAs) were published on a non-statutory basis in 1995, but have not since been statutorily proposed or designated. There are no NHAs designated within or nearby the Dublin Docklands but there are number of pNHAs including those listed on Table 4.2 and mapped on Figure 4.2.

### 4.6.6 Land Cover Mapping

CORINE\textsuperscript{31} land cover mapping for the Dublin Docklands is shown on Figure 4.3. The most dominant land cover types are urban and industrial/commercial uses and sea ports.

---

\textsuperscript{26} Sensitive features include: light-bellied brent goose; shelduck; oystercatcher; golden plover; knot; sanderling; dunlin; curlew; redshank and turnstone.

\textsuperscript{27} Sensitive features include: light-bellied brent goose; shelduck; ringed plover; golden plover; grey plover and bar-tailed godwit.

\textsuperscript{28} Sensitive features include: cormorant; herring gull; kittiwake; guillemot and razorbill.

\textsuperscript{29} Sensitive features include: roseate tern; common tern and Arctic tern.

\textsuperscript{30} Sensitive features include: kittiwake.

\textsuperscript{31} The CORINE (Coordinated Information on the Environment) land cover data series was devised as a means of compiling geo-spatial environmental information in a standardised and comparable manner. CORINE has become a key data source for informing environmental and planning policy on a national and European level. The main land cover type in Ireland is agricultural land including forestry, which accounts for two-thirds of the national landmass. Most of this is permanent grassland pastures. Peatlands and wetlands are the second most widespread land cover type, covering almost one-fifth of the country. While forested areas cover about one-tenth of the country. Despite rapid development in the past two decades, Ireland’s landscape is predominantly rural and agricultural.
Categories from CORINE mapping that may indicate areas likely to contain Annex I habitats within or nearby the area to which the Plan relates include:

- Water bodies;
- Mixed forests;
- Intertidal flats;
- Beaches dunes sand;
- Salt marshes; and
- Land principally occupied by agriculture with areas of natural vegetation.

### 4.6.7 Register of Protected Areas

In response to the requirements of the Water Framework Directive a number of water bodies or parts of water bodies that must have extra controls on their quality by virtue of how their waters are used by people and by wildlife have been listed on Registers of Protected Areas (RPAs).

The groundwater underlying the Dublin Docklands is part of the wider groundwater area relating to drinking water sources.

The River Liffey is listed on the RPA for ‘Nutrient Sensitive Areas – Rivers’ and the Liffey and Tolka Estuaries are listed on the RPA for ‘Nutrient Sensitive Areas - Lakes and Estuaries’.

There are a number of bathing locations near the area to which the Plan relates included on the RPA for bathing waters: Dollymount Strand; Sandymount Strand; and Merrion Strand.

### 4.6.8 Other Designations

Other designations mapped on Figure 4.2 include Nature Reserves and Ramsar Sites.

Nature Reserves are areas of importance to wildlife, which is protected under Ministerial order. There are currently 78 Statutory Nature Reserves in Ireland. Most are owned by the State but some are owned by organisations or private landowners.

Ramsar Sites are designated and protected under the Convention of Wetlands of International Importance, especially as Water Fowl Habitat, which was established at Ramsar in 1971 and ratified by Ireland in 1984. Ireland presently has 45 sites designated as Wetlands of International Importance, with surface areas of 66,994 hectares. The objective of a Ramsar site is the conservation of wetlands for wildfowl. While Ireland ratified the Ramsar Convention in 1984 there is no legal backing for Ramsar Sites unless they are also Nature Reserves or SPAs and as such are protected by the Wildlife Acts 1976 and 2000 (as amended) or the Birds or Habitats Directives.

Baldoyle Estuary (to the north-east from the Docklands) and North Bull Island (to the north-east from the Docklands) are designated as both Nature Reserves and Ramsar Sites. Ramsar Sites are also designated at Broadmeadow Estuary/Malahide and Sandymount Strand/Tolka Estuary, as shown on Figure 4.2.

### 4.6.9 UNESCO Biosphere Designation

The United Nations Educational, Scientific and Cultural Organisation (UNESCO) Biosphere Reserve in North Bull Island was designated as a Biosphere Reserve in 1981 because of its rare and internationally important habitats and wildlife. The designation was extended to the wider Dublin Bay in 2015, reflecting the Bay’s significant environmental, economic, cultural and tourism importance, and now extends to over 300 km², with over 300,000 people living within the wider Biosphere area, including buffer and transition zones.

The Dublin Docklands are located within the outer Transition Zone of the Biosphere (this zone comprises 173 km² and forms the outer part of the Biosphere, including residential areas, harbours, ports and industrial and commercial areas) and is adjacent to areas that are part of both the Core Zone (this zone comprises 50 km² of areas of high natural value with key areas including the Tolka and Baldoyle Estuaries, Booterstown Marsh, Howth Head, North Bull Island, Dalkey Island and Ireland’s Eye) and the Buffer Zone (this zone comprises 82 km² of public and private green spaces such as parks, greenbelts and golf courses).

### 4.6.10 Existing Problems

Ireland’s Article 17 report on the Status of EU Protected Habitats and Species in Ireland (DCHG, 2019) identifies various Irish, EU-protected habitats and species to be of unfavourable status and many to be still declining, although it also identifies that a range of positive actions are underway. Categories for
pressures and threats on Ireland’s habitats and species identified by the report comprise:

- Agriculture;
- Forestry;
- Extraction of resources (minerals, peat, non-renewable energy resources);
- Energy production processes and related infrastructure development;
- Development and operation of transport systems;
- Development, construction and use of residential, commercial, industrial and recreational infrastructure and areas;
- Extraction and cultivation of biological living resources (other than agriculture and forestry);
- Military action, public safety measures, and other human intrusions;
- Alien and problematic species;
- Mixed source pollution;
- Human-induced changes in water regimes;
- Natural processes (excluding catastrophes and processes induced by human activity or climate change);
- Geological events, natural catastrophes;
- Climate change; and
- Unknown pressures, no pressures and pressures from outside the Member State.

The Plan includes measures to contribute towards the protection of biodiversity and flora and fauna and associated ecosystem services.

Previous changes in land uses arising from human development have resulted in a loss of biodiversity and flora and fauna however, legislative objectives governing biodiversity and fauna were not identified as being conflicted with.

CAAS for Fáilte Ireland
Figure 4.3 CORINE Land Cover Mapping 2018

CAAS for Fáilte Ireland
Figure 4.4 WFD Register of Protected Areas

CAAS for Fáilte Ireland
4.7 Population and Human Health

4.7.1 Population

Using the 2016 Census data, the total population of Dublin City was 554,554 persons, while the population of the two Local Electoral Areas that encompass the Docklands (North Inner City and Pembroke – South Dock) and other City areas was estimated to be 144,401 persons.\(^{32}\)

Population has the potential to interact with various environmental components. Potential interactions include:

- Recreational and development pressure on habitats and the landscape/seascape/City-scape (see Section 4.6);
- Contribution towards increase in demand for waste water treatment at the municipal level (see Section 4.11);
- Contribution towards increase in demand for water supply and associated potential impact of water abstraction (see Section 4.11);
- Potential interactions in flood-sensitive areas (see Section 4.9.9); and
- Potential effects on water quality (see Section 4.9).

4.7.2 Human Health

Human health has the potential to be impacted upon by environmental vectors (i.e. environmental components such as air, water or soil through which contaminants or pollutants, which have the potential to cause harm, can be transported so that they come into contact with human beings). Hazards or nuisances to human health can arise as a result of exposure to these vectors arising from incompatible adjacent land uses for example. These factors have been considered with regard to the description of: the baseline of each environmental component; and the identification and evaluation of the likely significant environmental effects of implementing the Plan.

---

\(^{32}\) Total population was estimated using the interactive Census 2016 mapping tool for Small Area Population Statistics (SAPMAP)

4.7.3 Seveso III Sites\(^{33}\)

Major industrial accidents involving dangerous substances pose a significant threat to humans and the environment; such accidents can give rise to serious injury to people or serious damage to the environment, both on and off the site of the accident. In Europe, a catastrophic accident in the Italian town of Seveso in 1976 prompted the adoption of legislation on the prevention and control of such accidents.

The so-called Seveso-Directive (Directive 82/501/EEC) was subsequently amended in view of the lessons learned from later accidents such as Bhopal, Toulouse or Enschede resulting in the Seveso-II (Directive 96/82/EC).

In 2012 the Seveso-III (Directive 2012/18/EU) was adopted taking into account, amongst other factors, the changes in EU legislation on the classification of chemicals and increased rights for citizens to access information and justice.

The Chemicals Act (Control of Major Accident Hazards involving Dangerous Substances) Regulations 2015 (S.I. No. 209 of 2015) (the “COMAH Regulations”), implement the Seveso III Directive (2012/18/EU). The purpose of the COMAH Regulations is to lay down rules for the prevention of major accidents involving dangerous substances, and to seek to limit as far as possible the consequences for human health and the environment of such accidents, with the overall objective of providing a high level of protection in a consistent and effective manner.

The intention is to achieve this through tiered controls on the operators of the establishments subject to the regulations - the larger the quantities of dangerous substances present at an establishment, the more onerous the duties on the operator.

The European Communities (Control of Major Accident Hazards Involving Dangerous Substances) Regulations 2006 and the European Union (Control of Major Accident Hazards Involving Dangerous Substances) (Amendment) Regulations 2013, which implemented the Seveso II Directive (96/82/EC), have been revoked by the

\(^{33}\) This section reproduces some of the information provided by the Health and Safety Authority at www.hsa.ie
European Union (Control of Major Accident Hazards Involving Dangerous Substances) (Revocation) Regulations 2015 (S.I. No. 208 of 2015) and replaced by the COMAH Regulations.

There are number of SEVESO III sites within the area to which the Plan relates and in the wider city area.

4.7.4 Existing Problems

Please refer to the other sections of this report referred to above with respect interactions with other environmental components.

4.8 Soil

4.8.1 Introduction

Soil is the top layer of the earth's crust. It is formed by mineral particles, organic matter, water, air and living organisms. Soil can be considered as a non-renewable natural resource because it develops over very long timescales. It is an extremely complex, variable and living medium and performs many vital functions including: food and other biomass production, storage, filtration and transformation of many substances including water, carbon, and nitrogen. Soil has a role as a habitat and gene pool, serves as a platform for human activities, landscape and heritage and acts as a provider of raw materials. Such functions of soil are worthy of protection because of their socio-economic as well as environmental importance. Soils in any area are the result of the interaction of various factors, such as parent material, climate, vegetation and human action.

To date, there is no legislation which is specific to the protection of soil resources. However, there is currently an EU Thematic Strategy on the protection of soil that includes a proposal for a Soil Framework Directive that proposes common principles for protecting soils across the EU.

4.8.2 Soil Types

Parts of the Docklands area comprise man-made fill placed over estuarine deposits.

There are some historic landfill sites within and adjacent to the area to which the Plan relates. Some of these sites have been resolved, while some are still used for, or are adjacent to, potentially contaminating activities.

4.8.3 County Geological Sites

There are 12 Geological Sites within the administrative region of Dublin City Council area. These Sites do not receive statutory protection like Natural Heritage Areas but receive an effective protection from their inclusion in the planning system.

One of the audited sites is adjacent to the area to which the Plan relates - North Bull Island in Dublin Bay County Geological Site (CGS) (Site code: IGH13). The island, as well as the beach (Dollymount Strand) running its entire length, is a very recent, and inadvertent, result of human intervention in the bay in the last 200 years. The sand flats and the associated beach, dune, lagoon and slack features, make North Bull Island an important geological site for the recognition of coastal deposition features.

4.8.4 Existing Problems

Legislative objectives governing soil were not identified as being conflicted with.
4.9 Water

4.9.1 The Water Framework Directive

Since 2000, Water Management in the EU has been directed by the Water Framework Directive 2000/60/EC (WFD). The WFD requires that all Member States implement the necessary measures to prevent deterioration of the status of all waters - surface, ground, estuarine and coastal - and protect, enhance and restore all waters with the aim of achieving good status. All public bodies are required to coordinate their policies and operations so as to maintain the good status of water bodies which are currently unpolluted and improve polluted water bodies to good status.

Article 4 of the WFD sets out various exemptions for deterioration in status caused as a result of certain physical modifications to water bodies. This is provided: all practicable mitigation measures are taken; there are reasons of overriding public interest or the benefits to human health, safety or sustainable development outweigh the benefits in achieving the WFD objective; there are no better alternatives; and the reasons for the physical modification are explained in the River Basin Management Plan (RBMP).

The EU’s Common Implementation Strategy Guidance Documents No. 20 and 36 provide guidance on exemptions to the environmental objectives of the WFD.

For the purpose of assessment, reporting and management, water is divided into groundwater, rivers, lakes, estuarine waters and coastal waters that are in turn divided into specific, clearly defined water bodies.

4.9.2 Zone of Influence

The Zone of Influence of the Plan beyond the area to which the Plan relates, with respect to impacts upon waters can be estimated to be all surface waters draining the area to which the Plan relates, groundwater beneath the area to which the Plan relates and all surface waters downstream of the area to which the Plan relates.

4.9.3 Surface Water Drainage

A catchment is an area of land contributing to a waterbody, with all the water ultimately running off to a single outlet. The WFD requires water quality management to be based on natural river catchments i.e. by reference to the natural, environmental unit rather than by reference to administrative or legal boundaries, which often fragment river catchments.

The main rivers within/adjacent to the Plan area are the Liffey, Tolka, and Dodder Rivers.

The surface water from the area to which the Plan relates drains into the Liffey and Dublin Bay catchment.

4.9.4 Surface Water Status

The WFD defines 'overall surface water status' as the general expression of the status of a body of surface water, determined by the poorer of its ecological status and its chemical status. Thus, in order to achieve 'good surface water status' both the ecological status and the chemical status of a surface water body need to be at least 'good'.

Ecological status is an expression of the structure and functioning of aquatic ecosystems associated with surface waters. Such waters are classified as of 'good ecological status' when they meet Directive requirements.

Chemical Status is a pass/fail assignment with a failure defined by a face-value exceedance of an Environmental Quality Standards (EQS) for one or more Priority Action Substances (PAS) listed in Annex X of the Water Framework Directive (WFD). The EQS values for individual PAS substances are set at European level. Good surface water chemical status means that concentrations of pollutants in the water body do not exceed the environmental limit values specified in the Directive.

The WFD surface water status (2010-2015) of rivers, coastal and transitional waters, within population of any catchment in Ireland (approx. 1,255,000) and is characterised by a sparsely populated, upland south eastern area underlain by granites and a densely populated, flat, low lying limestone area over the remainder of the catchment basin.

---

34 This catchment includes the area drained by the River Liffey and by all streams entering tidal water between Sea Mount and Sorrento Point, draining a total area of 1,616km². The largest urban centre in the catchment is Dublin City. The Liffey catchment contains the largest
and surrounding the area to which the Plan relates as shown on Figure 4.5.

The rivers draining the area to which the Plan relates vary in status. The Liffey is a transitional waterbody adjacent to the Plan area and is identified as being of moderate status. The Dodder is identified as being of moderate status when it enters Grand Canal Dock. The nearest stretch of the Tolka River (to the north of the Plan area) is transitional and identified as being of moderate status.

The coastal water status of Dublin Bay is identified as good.

### 4.9.5 Groundwater Status

Groundwater is stored in the void spaces in underground layers of rock, or aquifers. These aquifers are permeable, allowing both the infiltration of water from the soils above them and the yielding of water to surface and coastal waters. Groundwater is the part of the subsurface water that is in the saturated zone - the zone below the water table, the uppermost level of saturation in an aquifer at which the pressure is atmospheric, in which all pores and fissures are full of water.

For groundwater bodies, the approach to classification is different from that for surface water. For each body of groundwater, both the chemical status and the quantitative must be determined. Both have to be classed as either good or poor. The WFD sets out a series of criteria that must be met for a body to be classed as good chemical and quantitative status.

The WFD status (2010-2015) of all groundwater underlying the area to which the Plan relates is identified as being of good status, meeting the objectives of the WFD.

### 4.9.6 Aquifer Vulnerability and Productivity

The Geological Survey of Ireland (GSI) rates groundwater according to both their productivity and vulnerability to pollution. The area to which the Plan relates is underlain by a poor bedrock aquifer (unproductive except for local zones).

Aquifer vulnerability refers to the ease with which pollutants of various kinds can enter into groundwater. The aquifers underlying most the area to which the Plan relates are generally classified as being of low vulnerability and moderate vulnerability (see Figure 4.6). Areas with no vulnerability classification identified are likely to be reclaimed lands.

### 4.9.7 WFD Registers of Protected Areas

The WFD requires that Registers of Protected Areas (RPAs) are compiled for a number of water bodies or part of water bodies which must have extra controls on their quality by virtue of how their waters are used by people and by wildlife.

The WFD requires that these RPAs contain: areas from which waters are taken for public or private water supply schemes; designated shellfish production areas; bathing waters; areas which are affected by high levels of substances most commonly found in fertilizers, animal and human wastes - these areas are considered nutrient sensitive; areas designated for the protection of habitats or species e.g. Salmonid areas; Special Areas of Conservation (SACs); and, Special Protection Areas (SPAs).

Entries to the RPAs within or nearby the area to which the Plan relates include:

- All groundwater and surface waters sustaining areas designated as SACs and SPAs – SACs and SPAs are mapped on Figure 4.1;
- The River Liffey is listed on the RPA for ‘Nutrient Sensitive Areas – Rivers’ and the Liffey and Tolka Estuaries are listed on the RPA for ‘Nutrient Sensitive Areas - Lakes and Estuaries’ (see Figure 4.4);
- Bathing locations at Dollymount Strand, Sandymount Strand and Merrion Strand are included on the RPA for bathing waters (see Figure 4.4); and
- Groundwater across the area to which the Plan relates is included on the RPA for Groundwater Drinking Water (see Figure 4.4).

### 4.9.8 Bathing Waters

For bathing waters, Mandatory and Guide Values are set out for bathing waters in the 2006 EU Bathing Water Directive and transposing Regulations. Mandatory Values are values that must be observed if the bathing area is to be deemed compliant with the
Directive. Compliance with Guide Values exceeds guidance with Mandatory Values and can be regarded as quality objectives which bathing sites should endeavour to achieve.

Bathing waters are now classed into four quality categories; ‘Excellent’, ‘Good’, ‘Sufficient’, or ‘Poor’ with a minimum target of ‘Sufficient’ required to be achieved for all bathing waters.

The most recent available data from the EPA\textsuperscript{35} shows that the bathing waters quality adjacent to the area to which the Plan relates varies from \textit{good} (Dollymount Strand) to \textit{poor} (Sandymount Strand and Merrion Strand).

\section*{4.9.9 Flooding}

Certain areas across the Dublin Docklands are at risk of flooding from various sources including coastal and fluvial.

The Dublin City Development Plan 2016-2022 Strategic Flood Risk Assessment indicates that the area of Dublin Docklands is partially located within Flood Zones A and B. Predictive flood risk mapping is also available from the Office of Public Works (OPW) for rivers and coastal areas across the Docklands.

Strategic Flood Risk Assessment (SFRA) as required by the ‘The Planning System and Flood Risk Management Guidelines for Planning Authorities’ (OPW and DEHLG, 2009) is relevant to project planning and development and associated environmental assessment and administrative consent of projects.

Dublin City Council implements a Dublin City Emergency Plan that covers potential emergencies such as those relating to flooding.

\section*{4.9.10 Existing Problems}

Subject to exemptions provided for by Article 4 of the WFD, based on available water data, certain surface and groundwater bodies will need improvement in order to comply with the objectives of the WFD.

There is historic and predictive evidence of elevated levels of flood risk from fluvial and coastal sources at various locations across the Dublin Docklands.

\textsuperscript{35} EPA Report on \textit{Bathing Water Quality in Ireland 2018}
Figure 4.5 Surface Water Status (2010-2015)
Figure 4.6 Groundwater Vulnerability

CAAS for Fáilte Ireland
4.10 Air and Climatic Factors

4.10.1 Climatic Factors

Various provisions relating to climatic factors have been integrated into the Plan, compliance with which will need to be demonstrated by those seeking or maintaining funding from Fáilte Ireland. Such measures include those relating to (for more detail refer to Section 9):

- Walking and cycling; and
- Contribution towards European and national objectives for climate adaptation and mitigation, taking into account a wide range of detailed measures including those relating to resilience.

Interactions with climatic factors are also present with other environmental components including water/flooding (see Section 4.9).

Total emissions of greenhouse gases by humans come from various sectors including transport, agriculture, energy industries, manufacturing combustion, industrial processes, residential developments, commercial services developments, waste management processes and fluorinated gases equipment (such as refrigeration and fire protection systems).

Ireland’s Provisional Greenhouse Gas Emissions 1990-2017 (EPA, 2018) details provisional estimates of greenhouse gas emissions for the period 1990-2017. For 2017, total national greenhouse gas emissions are estimated to be 60.75 million tonnes carbon dioxide equivalent (Mt CO₂eq). This is 0.9% lower (0.53 Mt CO₂eq) than emissions in 2016.

The EPA 2018 publication Ireland’s Greenhouse Gas Emission Projections 2017-2035 provides an assessment of Ireland’s progress towards achieving its emission reduction targets set down under the EU Effort Sharing Decision (Decision No 406/2009/EC) for the years 2013-2020 and a longer-term assessment based on current projections. Ireland’s 2020 target is to achieve a 20% reduction of non-Emission Trading Scheme (non-ETS) sector emissions (i.e. agriculture, transport, the built environment, waste and non-energy intensive industry) on 2005 levels with annual limits set for each year over the period 2013-2020. Key Insights identified as part of the report’s package of documents are that:

- Latest EPA greenhouse gas emissions projections indicate an overall increase in greenhouse gas emissions from most sectors. The projected growth in emissions is largely underpinned by projected strong economic growth and relatively low fuel prices leading to increasing energy demand over the period.
- The positive impact on emissions of existing and planned policies and measures is tempered by the strong economic outlook and associated increase in energy demand.
- Ireland is not projected to meet 2020 emissions reduction targets and is not on the right trajectory to meet longer-term EU and national emission reduction commitments.
- Fossil fuels such as coal and peat continue to be key contributors to emissions from the power generation sector and the extent of their use will be a key determinant in influencing future emissions trends from this sector.
- A strong growth in emissions projections from the transport sector is attributed to a rise in fuel consumption particularly for diesel cars and diesel freight up to 2025. A projected accelerated deployment of electric vehicles between 2025 and 2030 does however result in a projected decline in emissions during this period.
- Agriculture emissions are projected to continue to grow steadily over the period. This is based on an updated outlook that sees an increase in animal numbers particularly for the dairy herd.
- The gap between the two scenarios – With Existing Measures and With Additional Measures – is narrowing over the period to 2020 indicating that mitigation options in the short-term are largely established.
- These projections do not consider the impact of policies and measures that form part of the recently announced National Development Plan or the full impact of policies and measures included in the National Mitigation Plan. It is anticipated that additional impact will be provided to the EPA by relevant Government Departments and...
Agencies and included in the 2019 Emission Projections.

Ireland’s National Policy position is to reduce CO₂ emissions in 2050 by 80% on 1990 levels across the Energy Generation, Built Environment and Transport sectors, with a goal of Climate neutrality in the Agriculture and Land-Use sector. The 2016 emissions for all of these sectors are rising, making achievement of long-term goals more difficult.

The Government’s 2019 Climate Action Plan reflects the central priority that climate change will have in Ireland’s political and administrative systems into the future, setting out governance arrangements including the carbon-proofing of government policies, the establishment of carbon budgets, the strengthening of the Climate Change Advisory Council and providing greater accountability to the Oireachtas.

The National Mitigation Plan (Department of Communications, Climate Action and Environment, 2017), represents an initial step to set Ireland on a pathway to achieve the level of decarbonisation required. It is a whole-of-Government Plan, reflecting in particular the central roles of the key Ministers responsible for the sectors covered by the Plan – Electricity Generation, the Built Environment, Transport and Agriculture, as well as drawing on the perspectives and responsibilities of a range of other Government Departments.

The National Adaptation Framework (Department of Communications, Climate Action and Environment, 2018), sets out the national strategy to reduce the vulnerability of the country to the negative effects of climate change and to avail of positive impacts. The National Adaptation Framework outlines a whole of government and society approach to climate adaptation. Under the Framework, a number of Government Departments will be required to prepare sectoral adaptation plans in relation to a priority area that they are responsible for.

The National Climate Action Plan 2019 is an all of Government plan to tackle climate change and bring about a step change in Ireland’s climate ambition over the coming years. The plan sets out an ambitious course of action over the coming years to address the diverse and wide-ranging impacts climate disruption is having on Ireland’s environment, society, economic and natural resources. The Climate Action Plan sets out clear 2030 targets for each sector with the ultimate objective of achieving a transition to a competitive, low-carbon, climate-resilient, and environmentally sustainable society and economy by 2050.

The use of alternative fuels, including electricity, forms a significant part of government policy to reduce emissions, including from transport. Greater use of alternative fuels, including renewable energy, has the potential to further contribute towards energy security.

### 4.10.2 Ambient Air Quality

In order to protect human health, vegetation and ecosystems, EU Directives set down air quality standards in Ireland and the other Member States for a wide variety of pollutants. These pollutants are generated through fuel combustion, in space heating, traffic, electricity generation and industry and, in sufficient amounts, could affect the well-being of the areas inhabitants. The EU Directives include details regarding how ambient air quality should be monitored, assessed and managed.

The principles to this European approach are set out in the Ambient Air Quality and Cleaner Air for Europe (CAFE) Directive (2008/50/EC) (which replaces the earlier Air Quality Framework Directive 1996 and the first, second and third Daughter Directives; the fourth Daughter Directive will be included in CAFE at a later stage).

In order to comply with the directives mentioned above, the EPA measures the levels of a number of atmospheric pollutants. For the purposes of monitoring in Ireland, four zones are defined in the Air Quality Standards Regulations 2002 (SI No. 271 of 2002).

The EPA’s (2019) Air Quality in Ireland 2018 identifies that:

- Levels at monitoring sites in Ireland were below the EU legislative limit values in 2018;
- Ireland was above World Health Organization (WHO) air quality guideline value levels at a number of monitoring sites for fine particulate matter, ozone and nitrogen dioxide;
- Ireland was above the European Environment Agency reference level for PAH, a toxic chemical, at three monitoring sites.
Problem pollutants identified by the EPA include particulate matter from burning of solid fuel and nitrogen dioxide from transport emissions in urban areas. Indications that Ireland will exceed EU limit values for nitrogen dioxide in the near future.

With regards to solutions, the report identifies that:

- To tackle the problem of particulate matter, clean ways of heating homes and improve energy efficiency of homes can be progressed; and
- To reduce the impact of nitrogen dioxide, transport options in the Government’s Climate Action Plan can be implemented and transport choices can be considered by individuals.

The current air quality in the Plan area is identified by the EPA as being good36.

4.10.3 Noise

Noise is unwanted sound. The Noise Directive - Directive 2002/49/EC relating to the assessment and management of environmental noise - is part of an EU strategy setting out to reduce the number of people affected by noise in the longer term and to provide a framework for developing existing EU policy on noise reduction from source. The Directive requires competent authorities in Member States to:

- Draw up strategic noise maps for major roads, railways, airports and agglomerations, using harmonised noise indicators and use these maps to assess the number of people which may be impacted upon as a result of excessive noise levels;
- Draw up action plans to reduce noise where necessary and maintain environmental noise quality where it is good; and,
- Inform and consult the public about noise exposure, its effects, and the measures considered to address noise.

In compliance with the Directive and transposing Environmental Noise Regulations (SI No. 140 of 2006), Noise Action Plans have been prepared for each local authority area within the country. The Noise Action Plan for the Agglomeration of Dublin addresses the agglomeration of Dublin and major roads, railways and airports. The Action Plan includes noise mapping and is required to include measures to manage noise issues and effects, including noise reduction if necessary.

4.10.4 Existing Problems

The Climate Change Advisory Council’s Annual Review 2019 identifies that the most recent projections demonstrate that, under different assumptions, Ireland will not meet its emissions reduction targets, even with the additional policies and measures included in the National Development Plan. The projections also show that progress on reducing emissions is sensitive to the future path of fuel prices. A significant and sustained rate of emissions reduction of approximately -2.5% per year is required to meet our objectives for 2050. It is noted that additional measures within the recent Climate Action Plan are not included.

4.11 Material Assets

4.11.1 Water Services

4.11.1.1 Waste Water

The EPA’s 2019 report ‘Urban Waste Water Treatment in 2018’ identified that:

- Waste water treatment at 21 large urban areas did not meet European standards;
- Raw sewage is released into the environment from 36 urban areas;
- Waste water from 57 areas is the sole threat to waters at risk of pollution;
- Waste water contributed to poor quality bathing waters at three beaches in 2018;
- Discharges from 13 areas must improve to protect freshwater pearl mussels;
- Disinfection systems must be installed at two villages to safeguard shellfish; and
- Eight waste water collection systems have been found non-compliant with European Union requirements.

Based on the EPA’s assessment of monitoring information provided by Irish Water and the enforcement activities carried out by the EPA, this report identifies urban areas with the most

36 15/11/2019 (http://www.epa.ie/air/quality/)
important environmental issues that must be addressed.

There are two urban areas in County Dublin listed currently as priority areas (Malahide and Ringsend), where improvements are required to resolve urgent environmental issues.

The area to which the Plan relates is served by the waste water treatment plant at Ringsend, which caters for the Dublin Region. Ringsend WWTP is currently identified by the EPA as one of two priority urban areas in the Dublin region, where improvements are needed to resolve the environmental issues. Waste water discharges from Ringsend are also identified by the EPA as contributing factor to poor quality of bathing waters at Merrion Strand and Sandymount Strand and the sole significant pressure on water bodies at risk of pollution: Liffey Estuary Lower, Liffey Estuary Upper and Tolka Estuary.  

Irish Water, working in partnership with Dublin City Council, is planning to invest over €1.3 million to upgrade the sewer network in the Dublin's North Docklands Area.

The most recent EPA’s site visit report for Ringsend Waste Water Treatment Plant (Licence No. D0034-01) shows that facility’s operation and environmental performance is not satisfactory.

The EPA has highlighted that Ringsend Waste Water Treatment Plant is failing to meet national and European Union treatment standards, because the plant is not big enough to adequately treat all of the waste water that it receives.

Ringsend Waste Water Treatment Plant opened in 2003 with a capacity to cater for a population of 1.64 million. It now serves an average population equivalent to 1.9 million, which can increase up to 2.3 million during busy periods. The plant will be upgraded in two phases:

- Construction work began in 2018 to extend the plant and provide additional treatment capacity for a population equivalent of 400,000. This new extension is due to be completed in 2020; and
- Further work to upgrade the current treatment process and bring the treatment capacity up to 2.4 million is due to begin in 2021. Irish Water recently revised the expected completion date for this work from 2023 to 2025.

### 4.11.1.2 Water Supply

Drinking water supply in the area to which the Plan relates is provided by Public Water Supply Schemes, including the Stillorgan Water Supply Scheme. Irish Water has already invested €3.4 million in a new system to improve the disinfection of drinking water stored in the Stillorgan Reservoir. The long-term solution to upgrade the reservoir is now being progressed.

Under Section 58 of the Environmental Protection Agency Act 1992, the EPA is required to collect and verify monitoring results for all water supplies in Ireland covered by the European Communities (Drinking Water) Regulations, 2000. The EPA publishes their results in annual reports that are supported by Remedial Action Lists (RALs). The RAL identifies water supplies that are not in compliance with the Regulations mentioned above.

The most recent published EPA Remedial Action List (Q2 of 2019) does not list any drinking water supply in the area to which the Plan relates as being in need of improvement.

### 4.11.2 Public Assets and Infrastructure

Dublin City, including the Docklands, is served by rail, trams, bus and national, regional and strategic roads.

---

37 EPA (2019) *Urban Waste Water Treatment in 2018*
40 In February 2019 Irish Water informed the EPA of the release of waste water sludge from Ringsend waste water treatment plant into the Lower Liffey Estuary. The breakdown resulted in the spillage of waste water from the treatment process into the treated waste water being discharged into the Lower Liffey Estuary at Poolbeg and
42 EPA has recently issued boil water notices for areas of Dublin, Meath and Kildare supplied by the Leixlip Water Treatment Plant due to 'inadequate treatment – disinfection' (October 2019) and 'poor turbidity removal' (November 2019).
The Dublin Docklands are also strategically positioned at the centre of coastal network of towns in the eastern coast of Ireland, running from Dún Laoghaire in the south to Howth in the north. Dublin Port facilitates industrial, employment and recreational uses, including transport, fuel storage, marine leisure and tourism. Dublin City is also served by the Dublin Airport, located approximately 15 km to the north-west of the Dublin Docklands.

Public assets and infrastructure that have the potential to be impacted upon by the development of tourism related infrastructure, if unmitigated, include resources such as public open spaces, parks and recreational areas; public buildings and services; utility infrastructure (electricity, gas, telecommunications, water supply, waste water infrastructure etc.).

4.11.3 Waste Management

4.11.4 Existing Problems

The provisions of the Plan and the wider planning framework will contribute towards protection of the environment with regard to impacts arising from material assets.

2018 saw long dry spells, which Met Éireann compared to 1976 when similar drought conditions were experienced across the country. The prolonged hot weather during the summer caused a huge increase in water usage across the country. As demand for water rose to critical levels, Irish Water’s supplies were put under severe stress as more water was being used than could be produced. Public Water Supply Schemes in the Greater Dublin Area were also under pressure during this extended period of dry weather. As a result, measures were taken to reduce consumption to help replenishing water supplies and to minimise the impact on communities and businesses in the Dublin region.

Irish Water is currently preparing a National Water Resources Plan (NWRP) to address issues with the supply and demand for drinking water in Ireland over the short, medium and long term.

4.12 Cultural Heritage

4.12.1 Archaeological Heritage

Archaeology is the study of past societies through the material remains left by those societies and the evidence of their environment. Archaeological sites and monuments vary greatly in form and date; examples include earthworks of different types and periods, (e.g. early historic ringforts and prehistoric burial mounds), megalithic tombs from the Prehistoric period, medieval buildings, urban archaeological deposits and underwater features.

The European Convention on Protection of the Archaeological Heritage known as the Valletta Convention of 1992. This was ratified by Ireland in 1997 and requires that appropriate consideration be given to archaeological issues at all stages of the planning and development process.

The Record of Monuments and Places (RMP) is an inventory, put on a statutory basis by amendment to the National Monuments Act 1994, of sites and areas of archaeological significance, numbered and mapped. It is available from the National Monuments Service and at archaeology.ie.

The term ‘monument’ includes all man-made structures of whatever form or date except buildings habitually used for ecclesiastical purposes. All monuments in existence before 1700 A.D. are automatically considered to be historic monuments within the meaning of the Acts. Monuments of architectural and historical interest also come within the scope of the Acts.

---

44 Information from Irish Water’s website www.water.ie
Monuments include: any artificial or partly artificial building, structure or erection or group of such buildings, structures or erections; any cave, stone or other natural product, whether or not forming part of the ground, that has been artificially carved, sculptured or worked upon or which (where it does not form part of the place where it is) appears to have been purposely put or arranged in position; any, or any part of any, prehistoric or ancient tomb, grave or burial deposit, or, ritual, industrial or habitation site; and any place comprising the remains or traces of any such building, structure or erection, any such cave, stone or natural product or any such tomb, grave, burial deposit or ritual, industrial or habitation site, situated on land or in the territorial waters of the State', but excludes 'any building or part of any building, that is habitually used for ecclesiastical purposes' (National Monuments Acts 1930-2004).

A recorded monument is a monument included in the list and marked on the map, which comprises the RMP set out county by county under Section 12 of the National Monuments (Amendment) Act, 1994 by the Archaeological Survey of Ireland. The definition includes Zones of Archaeological Potential in towns and all other monuments of archaeological interest, which have so far been identified.

Dublin is an ancient city with many sites of archaeological importance. There are number of listed archaeological sites and monuments within and surrounding the area to which the Plan relates, including entries to RMP. The Dublin Docklands is partially in the archaeological zone for Dublin City DU018-020, which includes archaeological elements such as: stone sculptures, various crosses, graves, ogham stones, sheela-na-gig, church, bridge, mill, mine-lead, weir-fish, glass works, quay, religious house, prison, castle, chapel, ecclesiastical site, wells, and sea walls. Entries to the Record of Monuments and Places within the area to which the Plan relates are shown on Figure 4.8.

This archaeological zone extends eastwards from the City centre along North Wall Quay.

The coastal waters, tidal estuaries and rivers within and surrounding the area to which the Plan relates, contains many features and finds associated with maritime/riverine heritage such as shipwrecks, piers, quay walls, fords, stepping stones and associated archaeological objects and features.

The Underwater Archaeology Unit was established within the National Monuments Service to manage and protect Ireland's underwater cultural heritage, including the quantification of the underwater resource and assessing development impacts in order to manage and protect this aspect of Ireland's heritage. The Shipwreck Inventory is principally a desktop survey with information gathered from a broad range of cartographic, archaeological and historical sources, both documentary and pictorial. An inventory of wrecks covering the coastal waters off County Dublin was published in 2008. Wrecks over 100 years old and archaeological objects found underwater are protected under the National Monuments (Amendment) Acts 1987 and 1994. Significant wrecks less than 100 years old can be designated by Underwater Heritage Order on account of their historical, archaeological or artistic importance. Such Orders can also be used to designate areas of seabed or land covered by water to more clearly define and protect wreck sites and archaeological objects. Under the legislation all diving on known protected wreck sites or with the intention of searching for underwater cultural heritage is subject to licensing requirements.

There are a number of historically recorded shipwrecking events located in vicinity of the Dublin Bay.

Therefore, coastal waters, tidal estuaries and rivers surrounding the area to which the Plan relates, may contain many features and finds associated with maritime/riverine heritage such as shipwrecks, piers, quay walls, fords, stepping stones and associated archaeological objects and features.

**4.12.2 Architectural Heritage**

The term architectural heritage is defined in the Architectural Heritage (National Inventory) and Historic Monuments Act 1999 as meaning all: structures and buildings together with their settings and attendant grounds, fixtures and fittings; groups of structures and buildings; and, sites which are of technical, historical, archaeological, artistic, cultural, scientific, social, or technical interest.

Records of Protected Structures are legislated for under Section 12 and Section 51 of the Planning and Development Act 2000 as amended. Protected structures are defined in
the Planning and Development Act 2000 as amended as structures, or parts of structures that are of special interest from an architectural, historical, archaeological, artistic, cultural, scientific, social or technical point of view.

In relation to a protected structure or proposed protected structure, the following are encompassed:

- The interior of the structure;
- The land lying within the curtilage\(^{45}\) of the structure;
- Any other structures lying within that curtilage and their interiors; and,
- All fixtures and features that form part of the interior or exterior of any structure or structures referred to in subparagraph (i) or (iii).

There are currently over 9,000 structures in Dublin City listed for protection in the Record of Protected Structures. The number of entries to the Record of Protected Structures in the Dublin Docklands area includes Custom House (rebuilt in early 20th century Neo-Classical civic building), sea walls, bridges, stores/warehouses, sheds, chimneys and remnants. Protected structures designated across the area to which the Plan relates are mapped on Figure 4.7.

In addition to Protected Structures, the Planning and Development Act, 2000 provides the legislative basis for the protection of Architectural Conservation Areas (ACAs). An ACA is a place, area or group of structures or townscape that is of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest or value, or contributes to the appreciation of protected structures, whose character it is an objective to preserve in a development plan. The ACA designation requires that planning permission must be obtained before significant works can be carried out to the exterior of a structure in the ACA that might alter the character of the structure or the ACA.

There are presently 23 Architectural Conservation Areas designated within Dublin City and none of these are located within the Dublin Docklands area.

4.12.3 Existing Problems

The context of archaeological and architectural heritage has changed over time however no existing conflicts with legislative objectives governing archaeological and architectural heritage have been identified.

4.13 Landscape

Dublin Docklands are located at the lowest point of the River Liffey valley, in the centre of Dublin City and at the entrance to Dublin Bay. The surrounding hinterland offers views towards Dublin Mountains to the south, and gradually rising landscape to the north.

The River Liffey forms the central spine of the Docklands and Dublin City, connecting city’s amenity spaces and tourist attractions.

The Dublin Docklands area is defined by a number of historic waterways and its associated setting and amenity including rivers Liffey, Dodder, Grand Canal, Royal Canal, and the canal docks and locks. The area has also a strong character deriving from its industrial heritage (including maritime, rail and canal transport and power generation).

4.13.1 Existing Environmental Problems

The legislative objectives governing landscape and visual appearance were not identified as being conflicted with.

---

\(^{45}\) Curtilage is normally taken to be the parcel of ground immediately associated with the Protected Structure, or in use for the purposes of the structure. Protection extends to the buildings and land lying within the curtilage. While the curtilage sometimes coincides with the present property boundary, it can originally have included lands, features or even buildings now in separate ownership, e.g. the lodge of a former country house, or the garden features located in land subsequently sold off. Such lands are described as being attendant grounds, and the protection extends to them just as if they were still within the curtilage of the Protected Structure.
Figure 4.7 Architectural Heritage
Figure 4.8 Archaeological Heritage
Section 5 Strategic Environmental Objectives

Strategic Environmental Objectives (SEOs) are methodological measures developed from policies that generally govern environmental protection objectives established at international, Community or Member State level e.g. the environmental protection objectives of various European Directives that have been transposed into Irish law and that are required to be implemented.

The SEOs are set out under a range of topics and are used as standards against which the provisions of the Plan and the alternatives are evaluated in order to help identify which provisions would be likely to result in significant environmental effects and where such effects would be likely to occur, if - in the case of adverse effects - unmitigated.

The SEOs are linked to indicators that can facilitate monitoring the environmental effects of the Plan as well identifying targets that the Plan can help work towards.

All SEOs, indicators and targets are provided on Table 5.1 overleaf.

Further detail on legislation, plans and programmes are provided under Section 2 (and associated Appendix II “Relationship with Legislation and Other Plans and Programmes”) and Section 4.

Section 6  Description of Alternatives

6.1  Introduction

As per the requirements of the SEA Directive, this SEA considers reasonable alternatives, which are capable of being implemented for Plan, taking into account the objectives and the geographical scope of the Plan.

6.2  Current Situation (Alternative 1: Business as Usual)

Dublin welcomed 7.7 million tourists in 2018 and received €2,395 million in tourist spend during the same period. Tourism brings huge benefits to Dublin city and the wider county; however, it is acknowledged that currently most of the tourist activity is concentrated in the epicentre of the city.

With respect to the current situation, Fáilte Ireland’s research has identified that:

- The existing experience supply side conditions within the Docklands do not reflect the capacity of the area to deliver new experiences that will increase dwell time within the area. New experience development and expansion of existing experiences is required to provide a wider range of opportunities for the visitor to engage with the destination.
- The focus of local hospitality businesses is largely on the local business market without recognising the value of tourism growth to extend their business reach into the evening economy and weekend business.
- The destination is home to great expanses of water with low levels of engagement to animate and bring the ‘waters alive’.
- There is a lack of a common unifying theme for the Docklands must be addressed from the prospective of a message to project to the international visitor.
- The evening economy represents a major challenge, despite two of the country’s largest entertainment venues located within the Docklands. The current level of provision in the evening time is limited and restricts the ability of the area to retain visitors in the locality for sustained periods of time. Equally, the weekend economy poses similar challenges to address.
- A product imbalance exists between both sides of the destination defined by the areas on either side of the River Liffey.

This current situation presents Alternative 1 (Business as Usual) to be considered by the SEA. Numbers of visitors would continue to increase under this scenario – consistent with the development of tourism over many decades. However, because of the constraints and challenges of the current situation listed above, the full and sustainable tourism potential of the Docklands would not be achieved.

6.3  Prepare a Plan (Alternatives 2A and 2B: Prepare a Plan)

The constraints and challenges posed by the current situation (see Section 6.2) establish a potential need for a plan that seeks to sustainably increase the economic benefit of tourism to the area; facilitating, promoting, supporting and coordinating stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. Such a plan would not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent (such frameworks fall under the remit of other public authorities). Any projects would continue to be required to comply, as relevant, with the various provisions of documents that form the statutory decision-making and consent-granting framework.

Features of such a Plan (in combination with the wider and extensive policy and planning framework) would include:

- Recognition, in pursuing a sustainable tourism agenda by Fáilte Ireland, of the importance of constantly developing and expanding the Dublin tourism product to host and welcome tourists with a world class destination offering, helping to ensure that both visitors and locals continue to thrive and enjoy the city together.
- An enhanced visitor proposition with the objective of increasing visitor flow into the Docklands.
- The unlocking of economic growth potential of the Docklands by developing existing products and creating new experiences that would motivate tourists to visit and stay longer.
- Reference to the huge amount of development already underway in the Docklands and an aim to help harness the potential of this development.
It would deliver a collective vision for the area and deliver a unified destination proposition that will attract more visitors.

Under Alternative 2 there are two separate alternatives:

**Alternative 2A: A Plan with Additional Requirements for Environmental Protection and Management**

Fáilte Ireland provides funding sustainable tourism projects including land use and infrastructural development and land use activities. In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, **Alternative 2A** would require Fáilte Ireland’s stakeholders to demonstrate compliance with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 “Site Maintenance Guidelines” and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 “Environmental Management for Local Authorities and Others” (and any subsequent replacements).

In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) would have to demonstrate compliance, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

Further environmental requirements would be integrated into the Plan under Alternative 2A, relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services.

**Alternative 2B: A Plan without Additional Requirements for Environmental Protection and Management**

Alternative 2B would not include the requirements for environmental protection and management described under Alternative 2A. Projects would continue to be required to comply, as relevant, with the various provisions of documents that form the statutory decision-making and consent-granting framework.
Section 7  Evaluation of Alternatives

7.1  Introduction

This section provides a comparative evaluation of the environmental effects of implementing the alternatives that are detailed under Section 6. This determination sought to understand whether each alternative was likely to improve, conflict with or have a neutral interaction with environmental components.

7.2  Methodology

The relevant aspects of the current state of the environment (see Section 4) and the Strategic Environmental Objectives (see Section 5 and Table 7.1) are used in the evaluation of alternatives.

The alternatives are evaluated using compatibility criteria (see Table 7.2 below) in order to determine how they would be likely to affect the status of the SEOs. The SEOs and the alternatives are arrayed against each other to identify which interactions - if any - would cause effects on specific components of the environment. Where the appraisal identifies a likely conflict with the status of an SEO the relevant SEO code is entered into the conflict column - e.g. B1 which stands for the SEO likely to be affected - in this instance ‘To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species’.

The interactions identified are reflective of likely significant environmental effects.

The degree to which effects can be fully determined at this level of decision-making is limited, as the Plan will be implemented alongside planning and project development and associated environmental assessments and administrative consent of projects. Nonetheless, a comparative evaluation of the various alternatives can be provided.

---

50 These effects include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

⁵¹ See Section 5 for a description of Strategic Environmental Objectives.

⁵³ The definition of a ‘wildlife site’ provided by the Planning and Development Act 2000, as amended, includes Natural Heritage Areas (NHAs) and proposed NHAs.
7.3 Cumulative Effects

Cumulative effects are one of the types of effects that have been considered by the assessment of the alternatives. Cumulative effects can be described as the addition of many small impacts to create one larger, more significant, impact.

There are two types of potential cumulative effects that have been considered, namely:

- **Potential intra-Plan cumulative effects** - these arise from the interactions between different types of potential environmental effects resulting from a plan, programme, etc. Where there are elevated levels of environmental sensitivities (such as those identified under Section 4), future development could result in environmental conflicts and lead to a deterioration in environmental integrity. The interrelationships between environmental components that help determine these potential effects are identified on Table 8.4 in Section 8 e.g. interrelationships between: human health and water quality; human health and air quality; human health and flood risk; and ecology and water quality.

- **Potential inter-Plan cumulative effects** - these arise when the effects of the implementation of one plan occur in combination with those of other plans, programmes, developments, etc.

In considering the relationship with legislation and other plans and programmes it is important to note that the Plan will form part of a wider and extensive policy and planning framework that covers sectors including tourism, agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications and land use planning (see Section 2, 4 and 5 and Appendix II) for a range of sectors at a range of levels (e.g. National, Regional, County and Local). Legislation, plans and programmes from these other sectors also take into account demands from both residents and tourists when considering infrastructure and service needs. These plans, in turn, are also subject to their own SEA and AA requirements and include their own requirements relating to environmental protection and management. In this way, the environment is protected in a holistic manner so that the interactions of other uses and their associated plans and programmes are taken into account. Where they exist, the SEA recognises the existence of other environmental assessments with a view to avoid duplication of assessment, in compliance with the SEA Directive.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSESs) and lower tier Development Plans and Local Area Plans. The Eastern and Midlands RSES sets out objectives relating tourism development that have been subject to environmental assessment. The RSES will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSES and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards. These provisions are in addition to those that have been integrated into the Plan that will contribute towards sustainable development, environmental protection and environmental management (see Section 9).

Effects\(^\text{54}\) that may arise as a result of implementing the Plan, in combination with the existing statutory planning/decision-making and consent-granting framework, have been mitigated to the extent that the

\(^{54}\) Effects include in-combination effects – those arising from services and infrastructure (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use
only residual adverse effects likely to occur as a result of implementation of the Plan are those that are identified under Table 8.3.

Cumulative effects that have been considered include those resulting from the Plan in-combination with the following:

- Land use policy, plans and programmes (e.g. the National Planning Framework, the Regional Spatial and Economic Strategy, the Dublin City Development Plan 2016-2022 (as varied), the George's Quay Local Area Plan 2012 (as extended), the North Lotts and Grand Canal Dock SDZ Planning Scheme 2014 and the Poolbeg West SDZ Planning Scheme 2019); and
- Water services, waste management, transport and energy infrastructure plans (e.g. Irish Water's Water Services Strategic Plan and associated Capital Investment Plan, Regional Waste Management Plans, Transportation Policies and Strategies, Grid25 and associated Implementation Programme) and the Local Economic and Community Plans; and
- Environmental protection and management plans (e.g. River Basin Management Plans, National Mitigation Plan, National Adaptation Framework, and Flood Risk Management Plans).

Potential cumulative effects include the following arising from the alternatives in combination with the plans etc. detailed above (note that potential adverse cumulative effects will be mitigated by provisions that have been integrated into the Plan - see Section 9):

- Contribution towards sustainable development, environmental protection and environmental management – various provisions for which are provided for in the aforementioned plans (Alternatives 1, 2A and 2B).
- Need for and use of services, infrastructure and other development (to service development, including tourism), including those related to water services, transport, access or accommodation, that are planned for and consented through the statutory framework – and associated potential adverse environmental effects on various environmental components including biodiversity and flora and fauna, the status of waters, human health, soil, emissions, cultural heritage and landscape (Alternatives 1, 2A and 2B).
- Contribution towards climate adaptation and mitigation through measures such as those relating to walking and cycling, charging infrastructure, facilitating use of public transport, flood risk management and resilience (Alternatives 1, 2A and 2B).
- Contribution towards travel related greenhouse gas and other emissions to air as a result of increases in tourist numbers (Alternatives 1, 2A and 2B).
- Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats) through visitor management strategies, as relevant and appropriate (Alternative 2A).
- In combination with plans and programmes from all sectors potential adverse effects on all environmental components arising from all development (e.g. infrastructural, residential, accommodation, economic, forestry, agricultural etc.). The type of these effects are consistent with those described on Table 7.3. These plans and programmes from other sectors undergo SEA and comply with environmental legislation while projects are subject to EIA and AA, as relevant (Alternatives 1, 2A and 2B).

plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Mitigation includes that which has been integrated into the Plan – please refer to Section 9 of this report.
## 7.4 Detailed Consideration of Alternatives

Table 7.3 below describes effects common to all Alternatives (1, 2A and 2B).

### Table 7.3 Effects Common to All Alternatives

<table>
<thead>
<tr>
<th>Environmental Component</th>
<th>Environmental Effects from all Alternatives, in combination with the existing statutory planning/decision-making and consent-granting framework&lt;sup&gt;55&lt;/sup&gt;</th>
<th>Significant Positive Effect, likely to occur</th>
<th>Potential Significant Adverse Effect, if unmitigated</th>
</tr>
</thead>
</table>
| **Biodiversity and flora and fauna** | • Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats)  
• Contribution towards the maintenance of existing green infrastructure and its ecosystem services.  
• Contribution towards protection of biodiversity and flora and fauna as a result of contributing towards the protection of environmental vectors, air, water and soil. | Arising from both construction and operation of tourism related development/activities:  
• Loss of/damage to biodiversity in designated sites (including European Sites and Wildlife Sites) and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats; and disturbance to biodiversity and flora and fauna;  
• Habitat loss, fragmentation and deterioration, including patch size and edge effects; and  
• Disturbance (e.g. due to noise and lighting along transport corridors) and displacement of protected species such as birds and bats. |  |
| **Population and human health** | • Contribution towards the protection of human health.  
• Contribution towards the protection amenity usage and access.  
• Contribution towards the sustainable growth of tourism and associated sustenance and growth of communities in the Docklands. |  | Potential interactions if effects upon environmental vectors such as water are not mitigated. |
| **Soil** | • Contribution towards minimising land-take and loss of extent of soil resource  
• Contribution towards the protection of the environment from contamination.  
• Contributes towards protection of designated sites of geological heritage. |  | Adverse impacts upon the hydrogeological and ecological function of the soil resource.  
Adverse effects on designated geological heritage sites.  
Potential for increase in coastal/river bank erosion. |
| **Water** | • Contribution towards the protection of water resources (including the status of surface and groundwaters), bathing water quality and water based designations.  
• Contribution towards flood risk management and appropriate drainage. |  | Adverse impacts upon the status of water bodies and entries to the WFD Register of Protected Areas (ecological and human value), arising from changes in quality, flow and/or morphology.  
Increase in flood risk. |
| **Air and climatic factors** | • Contribution towards climate adaptation and mitigation |  | Potential conflict, in combination with plans and programmes from all sectors including transport and land use planning, between increases in visitors (which is likely to result in an increase in greenhouse gas emissions and other emissions to air, including from aviation, with associated interactions with climatic factors) and local, national and European objectives to reduce carbon emissions.  
Potential conflicts between transport movements, including car movements, and air quality. |

<sup>55</sup> Effects include in-combination effects – those arising from services, infrastructure and other development (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Effects would be to varying degrees – refer to Table 7.4 for comparative evaluation.
### Alternative 1: Business as Usual

Sustainable development, environmental management and environmental protection under Alternative 1 is provided through the existing statutory planning and consent framework. These measures would contribute towards positive effects on the protection and management of all environmental components (see Table 7.3).

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue be mitigated through that process.

In the absence of a Plan, there would continue to be an increase in tourist numbers – consistent with the development of tourism over many decades. However, because of the constraints and challenges of the current situation listed above, the full and sustainable tourism potential of the Docklands would not be achieved.

Under this alternative, there would be no additional visitor management or additional requirements for environmental protection and management as a result of a Plan.

Contributions towards in an increase in travel related greenhouse gas and other emissions to air, including from aviation, would not occur as a result of seeking to lengthen dwell time and grow visitor numbers, however; increases in tourist numbers would occur. Similarly, the positive mitigatory effects as a result of provisions of a Plan, such as those relating to public transport, cycling, walking and further requirements to comply with climate adaptation and management plans/strategies would not be provided for.

There would be one layer of mitigation under Alternative, through the existing statutory planning and consent framework.

### Alternative 2A: A Plan with Additional Requirements for Environmental Protection and Management

In addition to the measures relating to sustainable development, environmental protection, environmental management (and associated effects - see Table 7.3), which are provided under all alternatives this alternative would provide additional requirements for environmental protection and management, including those taken from the Wild Atlantic Way Operational Programme and those

---

56 Effects include in-combination effects – those arising from services, infrastructure and other development (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Effects would be to varying degrees – refer to Table 7.4 for comparative evaluation.
relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) would have to demonstrate compliance, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue be mitigated through that process.

A Plan would have the potential to increase numbers of tourists – and associated potential adverse effects – to a greater degree than would be the case if there was no Plan. This would be likely to contribute towards in an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases would be mitigated by the wider planning framework and by provisions that have been integrated into the Plan, including those relating to public transport, cycling, walking and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).

A Plan would also help to promote new experiences – including those relating to land use activities and developments. These would also have the potential to increase adverse effects.

Notwithstanding this, there would be three layers of mitigation, through:

- The existing statutory planning and consent framework;
- Visitor management strategies; and
- Additional environmental requirements for environmental protection and management, under this alternative.

**Alternative 2B: A Plan without Additional Requirements for Environmental Protection and Management**

Certain measures relating to sustainable development, environmental management and environmental protection (and associated effects - see Table 7.3) are provided under all alternatives.

Tourism related development would continue to be planned for and consented through the existing statutory planning and consent framework. Potential adverse effects (see Table 7.3) would continue be mitigated through that process.

A Plan would have the potential to increase numbers of tourists – and associated potential adverse effects – to a greater degree than would be the case if there was no Plan. This would be likely to contribute towards in an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases would be mitigated by the wider planning framework.

A Plan would also help to promote new experiences – including those relating to land use activities and developments. These would also have the potential to increase adverse effects.

Notwithstanding this, there would be one layer of mitigation, through the existing statutory planning and consent framework.

A comparative assessment of all three alternatives against SEOs is provided on Table 7.4 overleaf.

### 7.5 Selected Alternative for the Plan

Taking into account the environmental effects detailed above and the challenges and opportunities present to achieve the full and sustainable potential of the Docklands for tourism, Fáilte Ireland have proceeded with Alternative 2A "A Plan with Additional Requirements for Environmental Protection and Management".
### Table 7.4 Comparative Evaluation of Alternatives against SEOs

Section 8  Evaluation of Plan Provisions

8.1  Introduction

The relevant aspects of the current state of the environment (see Section 4) and the Strategic Environmental Objectives (see Section 5 and Table 8.1) are used in the assessment of the Plan.

The provisions are evaluated using compatibility criteria (see Table 8.2) in order to determine how they would be likely to affect the status of the SEOs. The SEOs and the Plan provisions are arrayed against each other to identify which interactions - if any - would cause effects on specific components of the environment. Where the appraisal identifies a likely conflict with the status of an SEO the relevant SEO code is entered into the conflict column - e.g. B1 which stands for the SEO likely to be affected - in this instance ‘To contribute towards compliance with the Habitats and Birds Directives with regard to the protection of European Sites and Annexed habitats and species’.57

The interactions identified are reflective of likely significant environmental effects58:

- Interactions that would be likely to improve the status of a particular SEO would be likely to result in a significant positive effect on the environmental component to which the SEO relates.

- Interactions that would potentially conflict with the status of an SEO and would be likely to be mitigated would be likely to result in potential significant negative effects however these effects will be mitigated by measures which have been integrated into the Plan (see Section 9).

- Interactions that would probably conflict with the status of an SEO and would be unlikely to be mitigated would be likely to result in a significant negative effect on the environmental component to which the SEO relates.

The degree to which effects can be fully determined at this level of decision-making is limited, as the Plan will be implemented alongside planning and project development and associated environmental assessments and administrative consent of projects. More detailed environmental measures may emanate from such assessments, further facilitating the mitigation of adverse effects.

58 These effects include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

60 The definition of a ‘wildlife site’ provided by the Planning and Development Act 2000, as amended, includes Natural Heritage Areas (NHAs) and proposed NHAs.
8.2 Overall Findings

The overall findings of the SEA are that:

- **The Plan contributes towards Compliance with Environmental Legislation and Guidelines**

  Fáilte Ireland are integrating all recommendations arising from the SEA and AA processes into the Plan (see Section 9 of this report), facilitating compliance of the Plan with various European and National legislation and Guidelines relating to the sustainable development, environmental protection and environmental management.

  Implementation of the Plan will contribute towards efforts to achieve a number of the 17 Sustainable Development Goals\(^{61}\) of the 2030 Agenda for Sustainable Development, which were adopted by world leaders in 2015 at a United Nations Summit and came into force in 2016.

- **The Plan provides for Environmental Protection and Management**

  Fáilte Ireland provides funding for sustainable tourism projects that emerge as part of specific, competitive, themed and time-bound grant schemes or as part of wider strategic partnerships. These include projects relating to land use, infrastructural development and land use activities and attractions. Reference made to such projects included in the Plan does not guarantee funding. While funding is provided to certain projects, Fáilte Ireland is not the developer.

  In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, Fáilte Ireland’s stakeholders shall be required to demonstrate compliance\(^{62}\) with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

  - Wild Atlantic Way Operational Programme Appendix 5 “*Site Maintenance Guidelines*” and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
  - Wild Atlantic Way Operational Programme Appendix 6 “*Environmental Management for Local Authorities and Others*” (and any subsequent replacements).

  In order to be realised, projects included in the Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various provisions of legislation, policies, plans and programmes that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards. Such legislation, policies, plans and programmes include:

  - Requirements for lower-tier environmental assessment, including EIA and AA;
  - The Dublin City Development Plan 2016-2022 (as varied), the George’s Quay Local Area Plan 2012 (as extended), the North Lotts and Grand Canal Dock SDZ Planning Scheme 2014 and the Poolbeg West SDZ Planning Scheme 2019, including various provisions relating to sustainable development, environmental protection and environmental management; and
  - The Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions), the National Mitigation Plan (2017 and any

\(^{61}\) Including: Goal 3 Ensure healthy lives and promote well-being for all at all ages; Goal 6 Ensure availability and sustainable management of water and sanitation for all; Goal 7 Ensure access to affordable, reliable, sustainable and modern energy for all.; Goal 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all; Goal 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation; Goal 11 Make cities and human settlements inclusive, safe, resilient and sustainable; Goal 12 Ensure sustainable consumption and production patterns; Goal 13 Take urgent action to combat climate change and its impacts; Goal 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

\(^{62}\) Demonstration of compliance may be supported by monitoring undertaken by the beneficiary.
subsequent versions) and the Dublin City Council Climate Change Action Plan 2019-2024.

Further requirements have been integrated into the Plan under the headings of “Infrastructure Capacity”, “Visitor Management” and “Green Infrastructure and Ecosystem Services” – see Section 9 of this Environmental Report.

- **The Plan is likely to contribute towards, in combination with other governmental policies, plans etc., an increase in greenhouse gas emissions – although such increases will be mitigated**

The Plan seeks to lengthen dwell time and grow visitor numbers to the Docklands and would, in combination with other governmental policies, plans etc., be likely to contribute towards an increase in travel related greenhouse gas and other emissions to air, including from aviation. These increases will be mitigated by provisions that have been integrated into the Plan, including those relating to sustainable mobility and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).

Furthermore, as identified in the Climate Action Plan (Government of Ireland, 2019):

> “Since 2012, greenhouse gas emissions associated with flights operating in the European Economic Area (EEA), including domestic flights as well as those to and from third countries, are covered by the EU ETS\(^{63}\). Airlines are required to monitor, report and verify their emissions, and to surrender allowances against those emissions. Airlines receive tradable allowances covering a certain level of emissions from their flights per year and must purchase allowances to cover any shortfall between their allocated sum of free emissions allowances and their actual emissions, as reported annually.

> To support the planned development of a global Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) by the International Civil Aviation Organisation (ICAO), the EU agreed in 2014 to limit the scope of aviation in the EU ETS to flights within the EEA. CORSIA will come into effect in 2021 and aims to stabilise global aviation emissions at 2020 levels by requiring airlines to offset any emissions growth after 2020 by purchasing eligible emission units generated by projects that reduce emissions in other sectors. As Ireland is a member of ICAO, Irish aircraft operators will have to offset any emissions growth after 2020 by purchasing eligible emission units, i.e. pay full carbon price.”

- **The Plan is Consistent with the existing Statutory Decision-Making and Consent-Granting Framework**

Implementing the Plan will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, stakeholders and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The Plan does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent.

The Plan is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSESS) and lower tier Development Plans and Local Area Plans. The Eastern and Midlands RSES sets out objectives relating tourism development that have been subject to environmental

---

\(^{63}\) Emissions Trading Scheme (ETS)
assessment. The RSES will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the Plan shall be consistent with and conform with the NPF, RSES and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and environmental management that have been integrated into these documents, including through SEA and AA processes. In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the Plan is not part and does not contribute towards.

- **Potentially Significant Adverse Effects to be mitigated**

  Potentially significant adverse environmental effects arising from the Plan, in combination with the existing statutory decision-making and consent-granting framework, are detailed on Table 8.3. These effects will be mitigated by the various provisions that have been integrated into the Plan including those that have arisen through the SEA and AA processes (see Section 9).

Table 8.3 details the various types of environmental effects likely to arise with respect to the Plan (as developed from the selected alternatives – see Section 7) as a direct result of activities under the Plan and in combination with the existing statutory decision-making and consent-granting framework. By complying with appropriate mitigation measures - including those that have been integrated into the Plan - potentially significant adverse environmental effects which could arise as a result of implementing the Plan would be likely to be avoided, reduced or offset.
### Table 8.3 Overall Findings – Environmental Effects arising from Plan Provisions

<table>
<thead>
<tr>
<th>Environmental Component</th>
<th>Environmental Effects, in combination with the existing statutory planning/decision-making and consent-granting framework[^64]</th>
<th>Potential Significant Adverse Effect, if unmitigated</th>
<th>Residual Adverse Non-Significant Effects</th>
</tr>
</thead>
</table>
| **Biodiversity and flora and fauna** | • Contribution towards the protection and management of biodiversity and flora and fauna (in designated sites, including European Sites and Wildlife Sites, and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats) including through:  
  • Visitor management strategies; and  
  • VEDP requirements for environmental protection and management.  
  • Contributes towards the maintenance of existing green infrastructure and its ecosystem services.  
  • Contribution towards protection of biodiversity and flora and fauna as a result of contributing towards the protection of environmental vectors, air, water and soil. | Arising from both construction and operation of tourism related development/activities:  
  • Loss of/damage to biodiversity in designated sites (including European Sites and Wildlife Sites) and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats; and disturbance to biodiversity and flora and fauna;  
  • Habitat loss, fragmentation and deterioration, including patch size and edge effects; and  
  • Disturbance (e.g. due to noise and lighting along transport corridors) and displacement of protected species such as birds and bats. | • Loss of an extent of non-protected habitats and species arising from the replacement of semi-natural land covers with artificial surfaces arising from projects consented through the statutory planning/consent-granting framework.  
  • Losses or damage to ecology (these would be: in compliance with relevant legislation; and mitigated as projects would demonstrate compliance with various environmental protection and management measures) |
| **Population and human health** | • Contribution towards the protection of human health including through VEDP requirements for environmental protection and management.  
  • Contribution towards the protection of human health as a result of not directing additional tourists towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified.  
  • Contribution towards the protection amenity usage and access.  
  • Contribution towards the sustainable growth of tourism and associated sustenance and growth of communities in the Docklands. | • Potential interactions if effects upon environmental vectors such as water are not mitigated.  
  • Potential interactions if additional tourists are directed towards specific locations in instances where significant problems with critical infrastructure (drinking water, waste water, waste and transport) have been identified. | • Potential interactions with residual effects on environmental vectors. This has been mitigated by provisions that have been integrated into the Plan, including those relating to sustainable development, environmental protection and environmental management. |

[^64]: Effects include in-combination effects – those arising from services, infrastructure and other development (to service development, including tourism) that are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. Mitigation includes that which has been integrated into the Plan – please refer to Section 9 of this report.

| Soil | - Various provisions help to minimise land-take and loss of extent of soil resource.  
- Contribution towards the protection of the environment from contamination.  
- Contributes towards protection of designated sites of geological heritage. | - Adverse impacts upon the hydrogeological and ecological function of the soil resource.  
- Adverse effects on designated geological heritage sites.  
- Potential for increase in coastal/river bank erosion. | - Loss of an extent of soil function arising from the replacement of semi-natural land covers with artificial surfaces and from sea level rise/coastal erosion. |
| Water | - Contribution towards the protection of water resources (including the status of surface and groundwaters), bathing water quality and water based designations including through integrating requirements for environmental protection and management into the Plan.  
- Contribution towards flood risk management and appropriate drainage. | - Adverse impacts upon the status of water bodies and entries to the WFD Register of Protected Areas (ecological and human value), arising from changes in quality, flow and/or morphology.  
- Increase in flood risk. | - Increased loadings as a result of development to comply with River Basin Management Plan.  
- Flood related risks remain due to uncertainty with regard to extreme weather events – however such risks will be mitigated by: measures that have been integrated into the Plan; and the statutory planning/consent-granting framework. |
| Air and climatic factors | - Contribution towards climate adaptation and mitigation through measures relating to:  
  - Walking and cycling; and  
  - Contribution towards European and national objectives for climate adaptation and mitigation, taking into account a wide range of detailed measures including those relating to resilience. | - Potential conflict, in combination with plans and programmes from all sectors including transport and land use planning, between increases in visitors (which is likely to result in an increase in greenhouse gas emissions and other emissions to air, including from aviation, with associated interactions with climatic factors) and local, national and European objectives to reduce carbon emissions.  
- Potential conflicts between transport movements, including car movements, and air quality. | - An increase in travel related greenhouse gas and other emissions to air, including from aviation. This has been mitigated by provisions that have been integrated into the Plan, including those relating to sustainable mobility and compliance with the Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions) and the National Mitigation Plan (2017 and any subsequent versions).  
- Risks remain due to uncertainty with regard to climate and interactions with issues including flooding and material assets. |
| Material Assets | - Contributes towards protection and allows for continued use of public assets and infrastructure.  
- Contribution towards compliance with national and regional water services and waste management policies. | - Increased number of visitors have the potential to increase traffic levels.  
- The need to provide adequate and appropriate water services (it is the function of Irish Water to provide for such needs).  
- Increases in waste levels and residual wastes from visitors and construction of developments.  
- Potential impacts upon public assets and infrastructure. | - Residual wastes to be disposed of in line with higher level waste management policies.  
- Increased loading on infrastructure (drinking water, waste water, and waste transport).  
- Any impacts upon public assets and infrastructure to comply with statutory planning/consent-granting framework. |
| Cultural Heritage | - Contribution towards the long-term protection of archaeological and architectural heritage by encouraging greater levels of awareness and appreciation through, use, interpretation and access, in line with the requirements relating to | - Potential effects on designated and unknown archaeological heritage.  
- Potential effects on architectural heritage. | - Potential alteration to the context and setting of architectural heritage however, these will occur in compliance with legislation. |

\(^{64}\) See also sections 6.6, 6.7 and 6.9.
8.3 Appropriate Assessment

Stage 2 Appropriate Assessment (AA) has been undertaken alongside preparation of the Plan. The requirement for AA is provided under the EU Habitats Directive (Directive 1992/43/EEC).

The conclusion of the AA is that the Plan will not affect the integrity of the European Sites, alone or in combination with other plans or projects.

The preparation of the Plan, SEA and AA has taken place concurrently and the findings of the AA have informed the SEA. Various content has been integrated into the Plan through the SEA and AA processes (see Section 9).

8.4 Interrelationship between Environmental Components

The SEA Directive requires the Environmental Report to include information on the likely significant effects on the environment, on issues such as biodiversity, fauna, flora, population, human health, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors.

Likely significant effects on environmental components that are identified include those that are interrelated; implementation of the Plan will not affect the interrelationships between these components. The presence of significant interrelationships between environmental components is identified on Table 8.4.
Table 8.4 Potential for Interrelationships between Environmental Components

8.5  More Detailed Assessment of Plan Provisions

The implementation of the Plan is based on stakeholder commitment to project delivery. Key stakeholders will take ownership or partner on the delivery of the key tasks required to implement the Plan. Each of the following stakeholders will contribute towards the achievement of the actions (either as the Lead or as Partner) as identified on the tables below:

- CHQ: The CHQ Building
- DBF: Dublin Business Forum
- DCC: Dublin City Council
- DHPLG: Department of Housing, Planning and Local Government
- DIT: Dublin Institute of Technology
- DPC: Dublin Port Company
- DTDG: Docklands Tourism Development Group
- EPIC: The Irish Emigration Museum
- FI: Fáilte Ireland
- IHF: Irish Hotels Federation
- IR: Irish Rail
- LEO: Local Enterprise Office
- OPW: Office of Public Works
- SDI: Smarter Docklands Initiative
- WWI: Waterways Ireland

The indicative timeframes identified by the Plan are as follows:

- Short-term (ST): years 1-2
- Medium-term (MT): years 3-4
- Long-term (LT): year 5+

8.5.1  Overarching Focus of the Plan and Catalyst Projects

The overarching focus of the Dublin Docklands Visitor Experience Development Plan (VEDP) is on creating a strongly integrated tourism proposition for the area.

Enhancement of the tourism offering is supported by a series of experience development recommendations, some of which are Catalyst Projects. The Plan includes 10 Catalyst Projects, projects designed to be transformative for the destination and motivating for the international visitor. Many of these are already in planning or feasibility phase and will be supported by the Plan. They are detailed below (green text with yellow background) and are accompanied by specific Actions (from Appendix I to the Plan).

<table>

</table>
The assessment of the Plan’s overarching focus and Catalyst Projects (and associated actions) against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4; and
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 “Mitigation Measures” of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These Plan provisions would contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors and associated potential adverse effects. Such effects would include in-combination arising from services and infrastructure to service development, including tourism, which are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.

Sustainability and the environment have been integrated into various actions associated with the Catalyst Projects, for example:

- Action 1.1 “Custom House visitor experience”
- Action 1.6 “public realm and biodiversity”
- Action 1.7 “incorporate innovative approaches to blend existing flood protection barriers into the Waterline concept”
- Action 1.10 “Develop the 4km Port Greenway project”
8.5.2 Supporting Experience Development Recommendations

Supporting Experience Development Recommendations, other than existing developments and experiences and the emerging Catalyst Projects, are provided under each of the Plan’s two themes, Water and Innovation. These are supported by Experience Development Projects in Appendix I “Delivering the Plan”.

Projects that Support the Experience Development Recommendations

**DOCKLAND WATERS - DUBLIN’S TAPESTRY**

- Examine the feasibility of developing a new access point from Grand Canal Docks Station directly in the destination in addition with access enabled by the development of a new boardwalk in the lower Grand Canal Docks.  
  - MT | IR | WI | 1 |
- Examine the potential of inclusion of semi permanent units within the public realm for quayside activity providers.  
  - ST | DCC | 1 |
- Expand the Talking Statues programme to incorporate the Famine Memorial at Custom House Quay  
  - ST | FI | DCC | 1 |
- Examine the creation of an integrated Famine experience incorporating existing land and water based resources and local storytellers incorporating local genealogy resources and dedicated Famine heritage assets  
  - ST | EPIC | FI | 1 |
- Examine the opportunity to create an innovative Trail Head at Spencer Dock to link the area with the Dublin Canal 40 kilometre Greenway.  
  - MT | WI | DCC | 1 |
- Create a linkage between the Greenway, Dock Mile and Port Greenway to create an integrated walking and cycling experience through the destination  
  - LT | WI | DCC / DPC | 1 |
- Examine the feasibility of addressing the water quality issues in the Grand Canal Docks to facilitate increased levels of water activity  
  - LT | WI | 1 |
SEA Commentary:

The assessment of these Experience Development Recommendations and associated Projects against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4;
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 “Mitigation Measures” of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These Plan provisions would contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors and associated potential adverse effects. Such effects would include in-combination arising from services and infrastructure to service development, including tourism, which are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.
Sustainability and the environment have been integrated into various actions associated with the Projects that Support the Experience Development Recommendations, for example:

- **Action 2.5** “create an innovative Trail Head at Spencer Dock to link the area with the Dublin Canal 40 kilometre Greenway”
- **Action 2.6** “Create a linkage...to create an integrated walking and cycling experience”
- **Action 2.7** “addressing the water quality issues”
- **Action 2.16** “local amenity that can become an orientation trail route”

### 8.5.3 Destination Enabling Initiatives

Destination Enabling Initiatives are projects that will enhance the broader tourism infrastructure enabling the Docklands to build its existing tourism base. This will be through collaboration, product development, adoption of a consistent narrative and enhancing the area as a visitor destination. These also represent destination differentiators, leveraging the culture and heritage of the Docklands. **Destination Enabling Initiatives** identified by the Plan are detailed below (green text with yellow background) and are accompanied by specific Actions (from Appendix I to the Plan).

<table>

SEA Commentary:

The assessment of the Plan’s Destination Enabling Initiatives against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4; and
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 “Mitigation Measures” of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These Plan provisions would contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors and associated potential adverse effects. Such effects would include in-combination arising from services and infrastructure to service development, including tourism, which are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.

Sustainability and the environment have been integrated into various actions associated with the Destination Enabling Initiatives, for example:

- Action 3.9 “heritage, land and water resources”
- Action 3.11 “trails”

In addition to providing further detail regarding Catalyst Projects, Supporting Experience Development Recommendations and Destination Enabling Initiatives, Appendix I identifies a number of **Destination Projects** under the headings of "Destination Festivals and Events", "Destination Arts and Culture" and "Destination Visitor Orientation".
SEA Commentary:

The assessment of the Plan’s Destination Projects against Strategic Environmental Objectives (SEOs B1, B2, B3, PHH1, S1, W1, W2, W3, AC1, M1, M2, M3, CH1, CH2 and L1) is consistent with the:

- Environmental effects detailed under subsections 8.2 to 8.4; and
- Assessments of the selected alternatives for the Plan provided at Section 7 of this report.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent. The VEDP is situated within the hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The SEA process that has been undertaken alongside the preparation of the Plan has brought about various changes to the emerging Plan through an iterative process. These measures are reproduced under Section 9 “Mitigation Measures” of this SEA Environmental Report. By integrating all SEA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan, in combination with implementation of other provisions from the Plan and other plans, programmes, etc., are maximised.

These Plan provisions would contribute towards the promotion of new experiences – including those relating to land use activities and developments – and would be likely to contribute towards an increase in the number and dwell time of visitors and associated potential adverse effects. Such effects would include in-competition arising from services and infrastructure to service development, including tourism, which are planned for and consented through the statutory framework including the NPF, RSES and lower-tier land use plans. Examples may include developments/operation of developments relating to water services, transport, access or accommodation. New built developments and increases in the number and dwell time of visitors would continue to be planned for, mitigated and consented through the existing statutory planning and consent framework. The mitigation of potential adverse effects arising (see Table 8.3) would also be contributed towards by additional VEDP measures, including those relating to infrastructure capacity, visitor management and green infrastructure and ecosystem services. Any amendment to the VEDP or integration of VEDP provisions into other Plans, Programmes etc. would have to be subject to Screening for SEA and AA processes and full assessments as relevant.
Section 9 Mitigation Measures

9.1 Introduction

Mitigation measures are measures envisaged to prevent, reduce and, as fully as possible, offset any significant adverse impacts on the environment of implementing the Plan. Various environmental sensitivities and issues have been communicated to Fáilte Ireland through the SEA and Appropriate Assessment (AA) processes.

By integrating all SEA and AA recommendations into the Plan, Fáilte Ireland is helping to ensure that:

- The potential significant adverse effects of implementing the Plan are avoided, reduced or offset; and
- The beneficial environmental effects of implementing the Plan are maximised.

Mitigation was achieved through the following:

- Establishing the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework; and
- Integrating Requirements for Environmental Compliance into the Plan.

9.2 Establishing the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework

The SEA team worked with the Plan-preparation team at Fáilte Ireland in order to help establish the status of the Plan and its interrelationship with the Statutory Decision-Making and Consent-Granting Framework.

Implementing the VEDP will involve Fáilte Ireland helping to facilitate, promote, support and coordinate stakeholders (including local authorities, other government agencies, tourism operators, communities and visitors) in their activities in a way that is consistent with existing and emerging plans that have been subject to environmental assessment. The VEDP does not provide consent, establish a framework for granting consent or contribute towards a framework for granting consent.

The VEDP is situated alongside a hierarchy of statutory documents setting out public policy for, among other things, land use development, tourism, infrastructure, sustainable development, environmental protection and environmental management. These other existing policies, plans etc. have been subject to their own environmental assessment processes, as relevant, and form the decision-making and consent-granting framework.

The National Planning Framework (NPF) sets out Ireland’s planning policy direction for the next 22 years. The NPF is to be implemented through Regional Spatial and Economic Strategies (RSEs) and lower tier Development Plans and Local Area Plans. The Eastern and Midlands RSES sets out objectives relating to tourism development that have been subject to environmental assessment. The RSES will inform the review of existing, assessed Development Plans and Local Area Plans, which already include various provisions relating to land use, tourism and infrastructure. Such reviews will also be subject to environmental assessments.

Implementation of the VEDP shall be consistent with and conform with the NPF, RSES and lower-tier land use plans, including provisions relating to sustainable development, environmental protection and

---

65 This framework includes various environmental requirements.
66 These requirements include those that have arisen through the SEA and/or AA processes.
67 This framework includes various environmental requirements.
environmental management that have been integrated into these documents including through SEA and AA processes. In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework, of which the VEDP is not part and does not contribute towards.

Figure 9.1 provides a schematic of the relationship between Visitor Experience Development Plans and the existing Statutory Decision-Making and Consent-Granting Framework. Also indicated is the hierarchy of accompanying environmental assessment in force. Note that the Overall Findings of this SEA are provided under Section 8.2 of this SEA Environmental Report.
Figure 9.1 Statutory Decision-Making and Consent-Granting Framework, VEDPs and Environmental Assessment Requirements
9.3 Integrating Requirements for Environmental Protection and Management into the Plan\textsuperscript{68}

The SEA and AA team worked with the Plan-preparation team at Fáilte Ireland in order to integrate requirements for environmental protection and management into the Plan.

Fáilte Ireland provides funding for sustainable tourism projects that emerge as part of specific, competitive, themed and time-bound grant schemes or as part of wider strategic partnerships. These include projects relating to land use, infrastructural development and land use activities and attractions. Reference made to such projects included in the Plan does not guarantee funding. While funding is provided to certain projects, Fáilte Ireland is not the developer.

In order to achieve funding (including promotion) for land use or infrastructural development or land use activities from Fáilte Ireland, Fáilte Ireland’s stakeholders shall be required to demonstrate compliance\textsuperscript{69} with measures relating to sustainable development, environmental protection and environmental management contained within the following Fáilte Ireland published documents:

- Wild Atlantic Way Operational Programme Appendix 5 “Site Maintenance Guidelines” and other relevant measures from the Fáilte Ireland visitor and habitat management guidelines series (and any subsequent replacements); and
- Wild Atlantic Way Operational Programme Appendix 6 “Environmental Management for Local Authorities and Others” (and any subsequent replacements).

In order to be realised, projects included in the VEDP (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework\textsuperscript{70}, of which the VEDP is not part and does not contribute towards. Such legislation, policies, plans and programmes include:

- Requirements for lower-tier environmental assessment, including EIA and AA;
- The Dublin City Development Plan 2016-2022 (as varied), the George’s Quay Local Area Plan 2012 (as extended), the North Lotts and Grand Canal Dock SDZ Planning Scheme 2014 and the Poolbeg West SDZ Planning Scheme 2019, including various provisions relating to sustainable development, environmental protection and environmental management\textsuperscript{71}; and
- The Climate Action Plan 2019, the National Climate Change Adaptation Framework (2018 and any subsequent versions), the National Mitigation Plan (2017 and any subsequent versions) and the Dublin City Council Climate Change Action Plan 2019-2024\textsuperscript{72}.

Infrastructure Capacity\textsuperscript{73}

With respect to infrastructural capacity (including drinking water, wastewater, waste and transport), the potential impact on existing infrastructure shall be considered and mitigated as appropriate, where relevant. The promotion of developing visitor friendly infrastructure where it is required will also be encouraged.

\textsuperscript{68} These requirements include those that have arisen through the SEA and/or AA processes.

\textsuperscript{69} Demonstration of compliance may be supported by monitoring undertaken by the beneficiary.

\textsuperscript{70} This framework includes various environmental requirements.

\textsuperscript{71} For more information please refer to Appendix II of this report or the website of the relevant public authority.

\textsuperscript{72} For more information please refer to Section 4.10 and/or Appendix II of this report or the website of the relevant public authority.

\textsuperscript{73} This requirement has arisen through the SEA and/or AA processes.
**Visitor Management**

Those receiving funding shall seek to manage any increase in visitor numbers and/or any change in visitor behaviour in order to avoid significant effects including loss of habitat and disturbance, including ensuring that new projects are a suitable distance from ecological sensitivities.

Extensive research by Fáilte Ireland has shown improved environmental outcomes (including improved attainment of conservation objectives) in areas with visitor management strategies. Visitor management strategies will be required for proposed plans, programmes and projects that are to receive funding as relevant and appropriate.

**Green Infrastructure and Ecosystem Services**

Those receiving funding shall contribute towards the maintenance of existing green infrastructure and its ecosystem services, taking into account the output of the Mapping and Assessment of Ecosystem Services project being undertaken by the NPWS. Proposals for the development of any green infrastructure should demonstrate the synergies that can be achieved with regard to the: provision of open space amenities; sustainable management of water; protection and management of biodiversity; protection of cultural heritage; and protection of protected landscape sensitivities.

---

74 This requirement has arisen through the SEA and/or AA processes.
75 This requirement has arisen through the SEA and/or AA processes.
Section 10 Monitoring Measures

10.1 Introduction

The SEA Directive requires that the significant environmental effects of the implementation of plans and programmes are monitored. This section details the measures that have been selected in order to monitor the likely significant effects of implementing relevant Fáilte Ireland Plans, Programmes, etc.

The monitoring programme is flexible to take account of specific environmental issues and unforeseen adverse impacts should they arise. It monitors all potential effects, including positive and negative ones (including cumulative effects – refer also to Section 7.3). Monitoring can demonstrate the positive effects facilitated by the Plan and can enable, at an early stage, the identification of unforeseen adverse effects and the undertaking of appropriate remedial action.

The occurrence of persistent significant adverse environmental effects which are directly attributable to tourism would necessitate consideration of the effects in the context of the Plan and a possible review of part(s) of the Plan.

10.2 Indicators and Targets

Monitoring is based around indicators that allow quantitative measures of trends and progress over time relating to the Strategic Environmental Objectives identified in Section 5 and used in the evaluation. Each indicator to be monitored is accompanied by the target(s) that were identified with regard to the relevant strategic actions.

Table 10.1 overleaf shows the current indicators and targets that have been selected for monitoring the likely significant environmental effects of implementing relevant Fáilte Ireland Plans, Programmes, etc. These monitoring measures are updated on an ongoing basis.

Monitoring is an ongoing process and the programme allows for flexibility and further refinement of indicators and targets.

10.3 Sources

Confirmation of compliance with relevant environmental measures (see Section 9) will be a source of information for the Monitoring Programme. This documentation may include monitoring undertaken by beneficiaries to demonstrate compliance with the environmental requirements.

Other existing monitoring sources will be used, including:

- Sources maintained by Dublin City Council (such as those arising from the SEA of land use plans) and the relevant authorities e.g. the Environmental Protection Agency, the National Parks and Wildlife Service and the Central Statistics Office; and
- Lower-tier environmental assessment and decision making – including a review of project approvals granted and associated documents – will also be utilised as part of the Monitoring Programme.

10.4 Reporting and Responsibility

Reporting on environmental monitoring will address the indicators set out below. Fáilte Ireland is responsible for the ongoing review of indicators and targets, collating existing relevant monitored data, the preparation of monitoring evaluation report(s), the publication of these reports and, if necessary, the carrying out of corrective action, in combination with the relevant authorities.

Environmental monitoring for the VEDP and other existing/future Fáilte Ireland plans, programmes, etc. may be undertaken and reported on at the same time. The findings of monitoring will be reported on periodically with frequencies to be determined during implementation.

Appendix I SEA Determination

SEA Determination

Strategic Environmental Assessment (SEA) Screening Determination
for the:

Draft Dublin Docklands Visitor Experience Development Plan

Article 3 para. 2 of the SEA Directive\(^1\), introduced the requirement that SEA be carried out on plans and programmes, or modifications to these:

a) which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste management, water management, telecommunications, tourism, town and country planning or land use and which set the framework for future development consent of projects listed in Annexes I and II to the EIA Directive\(^2\), or

b) which, in view of the likely effect on sites, have been determined to require an assessment pursuant to Article 6 or 7 of the Habitats Directive\(^3\) i.e. the Directive requires that SEA is undertaken where Stage 2 Appropriate Assessment (AA)\(^4\) is being undertaken on plans, programmes etc.

The tourism sector Plan does not contribute towards the framework for future development consent of projects listed in Annexes I and II to the EIA Directive and does not contain provisions or define rules that must be complied with when administrative consent of other projects is being granted.

The Plan does, however, fall under the definition of a “plan” contained within the Birds and Natural Habitats Regulations 2011 (as amended) and therefore must be screened for the need to undertake AA. The Screening for AA has found that the Plan has the potential, if unmitigated, to affect the ecological integrity European Sites and that measures to ensure that potential effects are avoided are required. Taking into account the requirements of the Habitats Directive and recent case law (including, European Court of Justice Judgement C323-17), Stage 2 AA must therefore be carried out for the Plan. As Stage 2 AA is being undertaken on the Plan, SEA must also be undertaken for this Plan – see requirement at b) above.

This determination has been made having regard to the European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (Statutory Instrument Number (SI No. 435 of 2004), as amended by the European Communities (Environmental Assessment of Certain Plans and Programmes) (Amendment) Regulations 2011 (SI No. 200 of 2011).

Signatory:

\[Signature\]

Date: 15.11.19

---

\(^4\) AA is provided for by the Habitats Directive and is a focused and detailed impact assessment of the implications of a strategic action or project, alone and in combination with other strategic actions and projects, on the integrity of a European Site in view of its conservation objectives.

| SEA Directive (2001/42/EC) | • Contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development.  
• Provide for a high level of protection of the environment by carrying out an environmental assessment of plans and programmes which are likely to have significant effects on the environment. | • Carry out and environmental assessment for plans or programmes referred to in Articles 2 to 4 of the Directive.  
• Prepare an environmental report which identifies, describes and evaluates the likely significant effects on the environment of implementing the plan or programme and reasonable alternatives that consider the objectives and the geographical scope of the plan or programme.  
• Consult with relevant authorities, stakeholders and public allowing sufficient time to make a submission.  
• Consult other Member States where the implementation of a plan or programme is likely to have transboundary environmental effects.  
• Inform relevant authorities and stakeholders on the decision to implement the plan or programme.  
• Issue a statement to include requirements detailed in Article 9 of the Directive.  
• Monitor and mitigate significant environmental effects identified by the assessment. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| EIA Directive (2011/92/EU as amended by 2014/52/EU) | • Requires the assessment of the environmental effects of public and private projects which are likely to have significant effects on the environment.  
• Aims to assess and implement avoidance or mitigation measures to eliminate environmental effects, before consent is given of projects likely to have significant effects on the environment by virtue, inter alia, of their nature, size or location are made subject to a requirement for development consent and an assessment with regard to their effects. Those projects are defined in Article 4. | • All projects listed in Annex I are considered as having significant effects on the environment and require an EIA.  
• For projects listed in Annex II, a “screening procedure” is required to determine the effects of projects on the basis of thresholds/criteria or a case by case examination. This should take into account Annex III.  
• The environmental impact assessment shall identify, describe and assess in an appropriate manner, in the light of each individual case and in accordance with Articles 4 to 12, the direct and indirect effects of a project on the following factors: human beings, fauna and flora, soil, water, air, climate and the landscape, material assets and the cultural heritage, the interaction between each factor.  
• Consult with relevant authorities, stakeholders and public allowing sufficient time to make a submission before a decision is made. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Habitats Directive (92/43/EEC) | • Promote the preservation, protection and improvement of the quality of the environment, including the conservation of natural habitats and of wild fauna and flora.  
• Contribute towards ensuring biodiversity through the conservation of natural habitats and of wild fauna and flora. | • Propose and protect sites of importance to habitats, plant and animal species.  
• Establish a network of European sites hosting the natural habitat types listed in Annex I and habitats of the species listed in Annex II, to enable the natural habitat types and the species’ habitats concerned to be maintained or, where necessary, restored. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the |

<th><strong>EU Renewables Directive (2009/28/EC)</strong></th>
<th><strong>Summary of high level aim/ purpose/ objective</strong></th>
<th><strong>Summary of lower level objectives, actions etc.</strong></th>
<th><strong>Relevance to the Plan</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The Renewable Energy Directive establishes an overall policy for the production and promotion of energy from renewable sources in the EU.</td>
<td>• The Directive promotes cooperation amongst EU countries (and with countries outside the EU) to help them meet their renewable energy targets.</td>
<td>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>
</tr>
<tr>
<td></td>
<td>• It requires the EU to fulfil at least 20% of its total energy needs with renewables by 2020 – to be achieved through the attainment of individual national targets.</td>
<td>• The Directive specifies national renewable energy targets for each country, taking into account its starting point and overall potential for renewables.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• All EU countries must also ensure that at least 10% of their transport fuels come from renewable sources by 2020.</td>
<td>• EU countries set out how they plan to meet these targets and the general course of their renewable energy policy in national renewable energy action plans.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Other methods available to meet the target are the reduction of energy consumption, which is imperative because a mandatory percentage target for energy from renewable sources is likely to become increasingly difficult to achieve sustainably if overall demand for energy for transport continues to rise, and the use of electricity from renewable energy sources.</td>
<td>• Progress towards national targets is measured every two years when EU countries publish national renewable energy progress reports.</td>
<td></td>

| **Noise Directive (2002/49/EC)** | The Noise Directive - Directive 2002/49/EC relating to the assessment and management of environmental noise - is part of an EU strategy setting out to reduce the number of people affected by noise in the longer term and to provide a framework for developing existing Community policy on noise reduction from source. | The Directive requires competent authorities in Member States to:  
- Draw up strategic noise maps for major roads, railways, airports and agglomerations, using harmonised noise indicators and use these maps to assess the number of people which may be impacted upon as a result of excessive noise levels;  
- Draw up action plans to reduce noise where necessary and maintain environmental noise quality where it is good; and  
- Inform and consult the public about noise exposure, its effects, and the measures considered to address noise. The Directive does not set any limit value, nor does it prescribe the measures to be used in the action plans, which remain at the discretion of the competent authorities. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **Floods Directive (2007/60/EC)** | • Establishes a framework for the assessment and management of flood risks  
• Reduce adverse consequences for human health, the environment, cultural heritage and economic activity associated with floods in the Community | • Assess all water courses and coast lines at risk from flooding through Flood Risk Assessment  
• Prepare flood hazard maps and flood risk maps outlining the extent or potential of flooding and assets and humans at risk in these areas at River Basin District level (Article 3(2) (b)) and areas covered by Article 5(1) and Article 13(1) (b) in accordance with paragraphs 2 and 3.  
• Implement flood risk management plans and take adequate and coordinated measures to reduce flood risk for the areas covered by the Articles listed above.  
• Inform the public and allow the public to participate in planning process. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **Water Framework Directive (2000/60/EC)** | • Establish a framework for the protection of water bodies to include inland surface waters, transitional waters, coastal waters and groundwater and their dependent wildlife and habitats.  
• Preserve and prevent the deterioration of water status and where necessary improve and maintain “good status” of water bodies.  
• Promote sustainable water usage.  
• The Water Framework Directive repealed the following Directives:  
  - The Drinking Water Abstraction Directive  
  - Sampling Drinking Water Directive  
  - Exchange of Information on Quality of Surface Freshwater Directive  
  - Shellfish Directive  
  - Freshwater Fish Directive  
  - Groundwater (Dangerous Substances) Directive  
  - Dangerous Substances Directive | • Protect, enhance and restore all water bodies and meet the environmental objectives outlined in Article 4 of the Directive.  
• Achieve “good status” for all waters.  
• Manage water bodies based on identifying and establishing river basin districts.  
• Involve the public and streamline legislation.  
• Prepare and implement a River Basin Management Plan for each river basin districts identified and a Register of Protected Areas.  
• Establish a programme of monitoring for surface water status, groundwater status and protected areas.  
• Recover costs for water services. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
• Prevent the deterioration of the status of all bodies of groundwater.  
• Implements measures to prevent and control groundwater pollution, including criteria for assessing good groundwater chemical status and criteria for the | • Meet minimum groundwater standards listed in Annex 1 of Directive.  
• Meet threshold values adopted by national legislation for the pollutants, groups of pollutants and indicators of pollution which have been identified as contributing to the characterisation of bodies or groups of bodies of | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the |

| resulting from the interaction between people and places through time.  
• A heritage community consists of people who value specific aspects of cultural heritage which they wish, within the framework of public action, to sustain and transmit to future generations. | • Emphasise that the conservation of cultural heritage and its sustainable use have human development and quality of life as their goal.  
• Take the necessary steps to apply the provisions of this Convention concerning the role of cultural heritage in the construction of a peaceful and democratic society.  
• Greater synergy of competencies among all the public, institutional and private actors concerned. | bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| European Landscape Convention 2000 | • The developments in agriculture, forestry, industrial and mineral production techniques, together with the practices followed in town and country planning, transport, networks, tourism and recreation, and at a more general level, changes in the world economy, have in many cases accelerated the transformation of landscapes. The Convention expresses a concern to achieve sustainable development based on a balanced and harmonious relationship between social needs, economic activity and the environment. It aims to respond to the public’s wish to enjoy high quality landscapes. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| The Seventh Environmental Action Programme (EAP) of the European Community (2013–2020) | It identifies three key objectives:  
• to protect, conserve and enhance the Union’s natural capital  
• to turn the Union into a resource-efficient, green, and competitive low-carbon economy  
• to safeguard the Union’s citizens from environment-related pressures and risks to health and wellbeing | Four so called “enablers” will help Europe deliver on these objectives (goals):  
• Better implementation of legislation.  
• Better information by improving the knowledge base.  
• More and wiser investment for environment and climate policy.  
• Full integration of environmental requirements and considerations into other policies.  
Two additional horizontal priority objectives complete the programme:  
• To make the Union's cities more sustainable.  
• To help the Union address international environmental and climate challenges more effectively. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Bern Convention (Convention on the Conservation of European Wildlife and Natural Habitats) | The convention has three main aims:  
• to conserve wild flora and fauna and their natural habitats  
• to promote cooperation between states  
• to give particular attention to endangered and vulnerable species including endangered and vulnerable migratory species | The Parties under the convention recognise the intrinsic value of nature, which needs to be preserved and passed to future generations, they also:  
• Seek to ensure the conservation of nature in their countries, paying particular attention to planning and development policies and pollution control.  
• Look at implementing the Bern Convention in central Eastern Europe and the Caucus.  
• Take account of the potential impact on natural heritage by other policies.  
• Promote education and information of the public, ensuring the need to conserve species is understood and acted upon.  
• Develop an extensive number of species action plans, codes of conducts, and guidelines, at their own initiative or in co-operation with other organisations.  
• Created the Emerald Network, an ecological network made up of Areas of Special Conservation Interest. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

| **European 2020 Strategy for Growth** | Europe 2020 sets out a vision of Europe's social market economy for the 21st century and puts forward three mutually reinforcing priorities:  
1. Smart growth: developing an economy based on knowledge and innovation;  
2. Sustainable growth: promoting a more resource efficient, greener and more competitive economy;  
3. Inclusive growth: fostering a high-employment economy delivering social and territorial cohesion.  
In order to reach these priorities, the Commission proposes five quantitative targets to fulfil by 2020:  
1. 75% of the population aged 20-64 should be employed;  
2. 3% of the EU's GDP should be invested in R&D;  
3. The “20/20/20” climate/energy targets should be met (including an increase to 30% of emissions reduction if the conditions are right);  
4. The share of early school leavers should be under 10% and at least 40% of the younger generation should have a tertiary degree;  
5. 20 million less people should be at risk of poverty.  
| Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **National Level** | | | |
| **Ireland 2040 - Our Plan, the National Planning Framework, (replacing the National Spatial Strategy 2002-2020) and the National Development Plan (2018-2027)** | 1. The National Planning Framework is the Government's high-level strategic plan for shaping the future growth and development of to the year 2040. It is a framework to guide public and private investment, to create and promote opportunities for people, and to protect and enhance the environment - from villages to cities, and everything around and in between.  
2. The National Development Plan sets out the investment priorities that will underpin the successful implementation of the new National Planning Framework. This will guide national, regional and local planning and investment decisions in Ireland over the next two decades, to cater for an expected population increase of over 1 million people.  
**The National Planning Framework published alongside the National Development Plan yields ten National Strategic Outcomes as follows:**  
1. Compact Growth  
2. Enhanced Regional Accessibility  
3. Strengthened Rural Economies and Communities  
4. Sustainable Mobility  
5. A Strong Economy, supported by Enterprise, Innovation and Skills  
6. High-Quality International Connectivity  
7. Enhanced Amenity and Heritage  
8. Transition to a Low-Carbon and Climate-Resilient Society  
9. Sustainable Management of Water and other Environmental Resources  
10. Access to Quality Childcare, Education and Health Services  
| Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **Planning, Land Use and Transport Outlook 2040 [in preparation]** | The PLUTO will take account of forecasted future economic and demographic scenarios, affordability considerations and relevant Government policies and will:  
1. Quantify in broad terms the appropriate scale of financial investment in land transport over the long term;  
2. Consider how fiscal, environmental and technological developments might impact on this investment; and,  
3. Identify strategic priorities for future investment to ensure land transport infrastructure provision facilitates the objectives of Project Ireland 2040.  
In preparation | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **Planning and Development Act 2000 (as amended)** | The core principal objectives of this Act are to amend the Planning Acts of 2000 – 2009 with specific regard given to supporting economic renewal and sustainable development.  
| Development, with certain exceptions, is subject to development control under the Planning Acts and the local authorities grant or refuse planning permission for development, including ones within protected areas.  
There are, however, a range of exemptions from the planning system. Use of land for agriculture, peat extraction and afforestation, subject to certain thresholds, is generally exempt from the requirement to obtain planning permission.  
Additionally, Environmental Impact Assessment (EIA) is required for a range of classes and large scale projects.  
Under planning legislation, Development Plans must include mandatory objectives for the conservation of the natural heritage and for the conservation of European sites and any | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

| **European Communities Environmental Objectives (Groundwater) Regulations 2010** (S.I 9 of 2010), as amended (S.I. No. 366 of 2016) | • To amend the European Communities Environmental Objectives (Groundwater) Regulations 2010 (S.I. No. 9 of 2010) to make further provision to implement Commission Directive 2014/80/EU of 20 June 2014 amending Annex II to Directive 2006/118/EC of the European Parliament and of the Council on the protection of groundwater against pollution and deterioration. | The substances and threshold values set out in Schedule 5 to S.I. No. 9 of 2010 have been reviewed and amended where necessary, based on existing monitoring information and international guidelines on appropriate threshold values.  
  • Part A of Schedule 6 has been amended to include changes to the rules governing the determination of background levels for the purposes of establishing threshold values for groundwater pollutants and indicators of pollution.  
  • Part B of Schedule 6 has been amended to include nitrites and phosphorus (total) / phosphates among the minimum list of pollutants and their indicators which the Environmental Protection Agency (EPA) must consider when establishing threshold values  
  • Part C of Schedule 6 amends the information to be provided to the Minister by the EPA with regard to the pollutants and their indicators for which threshold values have been established. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **European Communities (Good Agricultural Practice for Protection of Waters) Regulations 2014** (S.I. No. 31 of 2014) | • These Regulations, which give effect to Ireland’s 3rd Nitrates Action Programme, provide statutory support for good agricultural practice to protect waters against pollution from agricultural sources | The Regulations include measures such as:  
  • Periods when land application of fertilisers is prohibited  
  • Limits on the land application of fertilisers  
  • Storage requirements for livestock manure; and  
  • Monitoring of the effectiveness of the measures in terms of agricultural practice and impact on water quality. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| **Climate Action and Low Carbon Development Act 2015** | • An Act to provide for the approval of plans by the Government in relation to climate change for the purpose of pursuing the transition to a low carbon, climate resilient and environmentally sustainable economy. | When considering a plan or framework, for approval, the Government shall endeavour to achieve the national transition objective within the period to which the objective relates and shall, in endeavouring to achieve that objective, ensure that such objective is achieved by the implementation of measures that are cost effective and shall, for that purpose, have regard to:  
  • The ultimate objective specified in Article 2 of the United Nations Framework Convention on Climate Change done at New York on 9 May 1992 and any mitigation commitment entered into by the European Union in response or otherwise in relation to that objective,  
  • The policy of the Government on climate change,  
  • Climate justice,  
  • Any existing obligation of the State under the law of the European Union or any international agreement referred to in section 2; and  
  • The most recent national greenhouse gas emissions inventory and projection of future greenhouse gas emissions, prepared by the Agency. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

<tr>
<td>National Water Resources Plan [in preparation]</td>
<td>The NWRP is a plan on how to provide a safe, secure and reliable water supply to customers for the next 25 years, without causing adverse impact on the environment. The objective of the NWRP is to set out how we intend to maintain the supply and demand for drinking water over the short, medium and long term whilst minimising the impact on the environment.</td>
<td>The key objectives of the plan are to: Identify areas where there are current and future potential water supply shortfalls, taking into account normal and extreme weather conditions Assess the current and future water demand from homes, businesses, farms, and industry Consider the impacts of climate change on Ireland’s water resources Develop a drought plan advising measures to be taken before and during drought events Develop a plan detailing how we deal with the material that is produced as a result of treating drinking water</td>
<td>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>

| National Strategic Plan for Aquaculture Development (2014–2020) | Vision: “Aquaculture in Ireland is economically, socially and ecologically sustainable, with a developed infrastructure, strong human potentials and an organized market. The consumption of aquaculture products is equal or above EU average, while the technological development of the sector is among the best in the EU.” | General development and growth objectives of marine and freshwater aquaculture (2014 – 2020):  
- Strengthen the social, business and administrative environment for aquaculture development  
- Increase in the total production to 24,050 tonnes while adhering to the principles of economic, social and ecological sustainability  
- Improvement of the perception and increase in the national consumption of National products | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Construction 2020, A Strategy for a Renewed Construction Sector | Construction 2020 sets out a package of measures agreed by the Government and is aimed at stimulating activity in the building industry.  
- The Strategy aims both to increase the capacity of the sector to create and maintain jobs, and to deliver a sustainable sector, operating at an appropriate level. It seeks to learn the lessons of the past and to ensure that the right structures and mechanisms are in place so that they are not repeated. | This Strategy therefore addresses issues including:  
- A strategic approach to the provision of housing, based on real and measured needs, with mechanisms in place to detect and act when things are going wrong;  
- Continuing improvement of the planning process, striking the right balance between current and future requirements;  
- The availability of financing for viable and worthwhile projects;  
- Access to mortgage finance on reasonable and sustainable terms;  
- Ensuring we have the tools we need to monitor and regulate the sector in a way that underpins public confidence and worker safety;  
- Ensuring a fit for purpose sector supported by a highly skilled workforce achieving high quality and standards; and  
- Ensuring opportunities are provided to unemployed former construction workers to contribute to the recovery of the sector. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Sustainable Development: A Strategy for Ireland (1997) | The overall aim of this Strategy is to ensure that economy and society in Ireland can develop to their full potential within a well-protected environment, without compromising the quality of that environment, and with responsibility towards present and future generations and the wider international community. | The Strategy addresses all areas of Government policy, and of economic and societal activity, which impact on the environment. It seeks to re-orientate policies as necessary to ensure that the strong growth Ireland enjoys and seeks to maintain will be environmentally sustainable. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| National Landscape Strategy for Ireland 2015–2025 and National Landscape Character Assessment (pending preparation) | The National Landscape Strategy will be used to ensure compliance with the European Landscape Convention and to establish principles for protecting and enhancing the landscape while positively managing its change. It will provide a high-level policy framework to achieve balance between the protection, management and planning of the landscape by way of supporting actions. | The objectives of the National Landscape Strategy are to:  
- Implement the European Landscape Convention by integrating landscape into the approach to sustainable development;  
- Establish and embed a public process of gathering, sharing and interpreting scientific, technical and cultural information in order to carry out evidence-based identification and | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for |

<td><strong>National Hazardous Waste Management Plan (EPA) 2014-2020</strong></td>
<td>This Plan sets out the priorities to be pursued over the next six years and beyond to improve the management of hazardous waste, taking into account the progress made since the previous plan and the waste policy and legislative changes that have occurred since the previous plan was published. Section 26 of the Waste Management Act 1996 as amended, sets out the overarching objectives for the National Hazardous Waste Management Plan. In this context, the following objectives are included as priorities for the revised Plan period:</td>
<td>The revised Plan makes 27 recommendations under the following topics:</td>
<td>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>
</tr>
<tr>
<td></td>
<td>• Landscape Strategy Vision: “Our landscape reflects and embodies our cultural values and our shared natural heritage and contributes to the well-being of our society, environment and economy. We have an obligation to ourselves and to future generations to promote its sustainable protection, management and planning.”</td>
<td>• To prevent and reduce the generation of hazardous waste by industry and society generally;</td>
<td>environmental protection and management.</td>
</tr>
<tr>
<td></td>
<td>• To maximise the collection of hazardous waste with a view to reducing the environmental and health impacts of any unregulated waste;</td>
<td>• Provide a policy framework, which will put in place measures at national, sectoral – including agriculture, tourism, energy, transport and marine - and local level, together with civil society, to protect, manage and properly plan through high quality design for the sustainable stewardship of the landscape;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• To strive for increased self-sufficiency in the management of hazardous waste and to minimise hazardous waste export;</td>
<td>• Ensure that we take advantage of opportunities to implement policies relating to landscape use that are complementary and mutually reinforcing and that conflicting policy objectives are avoided in as far as possible.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• To minimise the environmental, health, social and economic impacts of hazardous waste generation and management.</td>
<td>• To maximise the collection of hazardous waste with a view to reducing the environmental and health impacts of any unregulated waste;</td>
<td></td>

| National Adaptation Framework (NAF) 2018 and forthcoming regional, local and sectoral adaptation plans (including marine) | • NAF specifies the national strategy for the application of adaptation measures in different sectors and by local authorities in their administrative areas in order to reduce the vulnerability of the State to the negative effects of climate change and to avail of any positive effects that may occur | • Creating a stable attractive environment for hydrocarbon exploration and production  
• Being prepared for energy supply disruptions  
• Adaptation under this Framework should seek to minimise costs and maximise the opportunities arising from climate change.  
• Adaptation actions range from building adaptive capacity (e.g. increasing awareness, sharing information and targeted training) through to policy and finance based actions.  
• Adaptation actions must be risk based, informed by existing vulnerabilities of our society and systems and an understanding of projected climate change.  
• Adaptation actions taken to increase climate resilience must also consider impacts on other sectors and levels of governance | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. - the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Governments White Paper 'Ireland’s Transition to a Low Carbon Energy Future’ (2015 – 2030) | The White Paper sets out a vision and a framework to guide Irish energy policy between now and 2030. A complete energy policy update informed by the vision to transform Ireland into a low carbon society and economy by 2050.  
2030 will represent a significant milestone, meaning:  
• Reduced GHG emissions from the energy sector by between 80% and 95%  
• Ensuring that secure supplies of competitive and affordable energy remain available to citizens and businesses. | | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. - the achievement of the objectives of the regulatory framework for environmental protection and management. |
| National Renewable Energy Action Plan (2010) | • Sets out the Member State’s national targets for the share of energy from renewable sources to be consumed in transport, electricity and heating and cooling in 2020, and demonstrates how the Member State will meet its overall national target established under the Directive. | Including Ireland’s 16% target of gross final consumption to come from renewables by 2020. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. - the achievement of the objectives of the regulatory framework for environmental protection and management. |
| National Energy Efficiency Action Plan for Ireland (2009 – 2020) | • This is the second National Energy Efficiency Action Plan for Ireland. | The Plan reviews the original 90 actions outlined in the first Plan and updates/renews/removes them as appropriate. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. - the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Wildlife Act of 1976 Wildlife (Amendment) Act, 2000 | • The act provides protection and conservation of wild flora and fauna. | Provides protection for certain species, their habitats and important ecosystems  
• Give statutory protection to NHAs  
• Enhances wildlife species and their habitats | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. - the achievement of the objectives of the regulatory framework for environmental protection and management. |

<tbody>
<tr>
<td>Actions for Biodiversity (2017-2021) Ireland’s National Biodiversity Plan</td>
<td>- Sets out strategic objectives, targets and actions to conserve and restore Ireland’s biodiversity and to prevent and reduce the loss of biodiversity in Ireland and globally.</td>
<td>- Includes more species for protection combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>
</tr>
<tr>
<td>National Broadband Plan (2012)</td>
<td>- Sets out the strategy to deliver high speed broadband throughout Ireland.</td>
<td>The Plan sets out: - A clear statement of Government policy on the delivery of High Speed Broadband. - Specific targets for the delivery and rollout of high speed broadband and the speeds to be delivered. - The strategy and interventions that will underpin the successful implementation of these targets. - A series of specific complementary measures to promote implementation of Government policy in this area. Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>
</tr>
<tr>
<td>The Planning System and Flood Risk Management – Guidelines for Planning Authorities (2009)</td>
<td>- Sets out comprehensive mechanisms for the incorporation of flood risk identification, assessment and management into the planning process. - Ensures flood risk is a key consideration in preparing land use plans and in the assessment of planning applications. - Implementation of the Guidelines is through actions at national, regional, local authority and site-specific levels. - Planning authorities and An Bord Pleanála are required to have regard to the Guidelines in carrying out their functions under the Planning Acts.</td>
<td>Avoid inappropriate development in areas at risk of flooding. Avoid new developments increasing flood risk elsewhere, including that which may arise from surface water run-off. Ensure effective management of residual risks for development permitted in floodplains. Avoid unnecessary restriction of national, regional or local economic and social growth. Improve the understanding of flood risk among relevant stakeholders. Ensure that the requirements of EU and national law in relation to the natural environment and nature conservation are complied with at all stages of flood risk management. The 2009 Flood Risk Management Guidelines were amended by Circular PL 2/2014 (Department of the Environment, Community and Local Government) that provides advice on the use of OPW flood mapping in assessing planning applications and clarifies some advice from the 2009 Guidelines. Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>

### Summary of high level aim/ purpose/ objective

This National Policy Framework on Alternative Fuels Infrastructure for Transport represents the rst step in communicating our longer term national vision for decarbonising transport by 2050, the cornerstone of which is our ambition that by 2030 all new cars and vans sold in Ireland will be zero-emissions capable.

- By 2030 it is envisaged that the movement in Ireland to electrically-fuelled cars and commuter rail will be well underway, with natural gas and biofuels developing as major alternatives in the freight and bus sectors.

### Summary of lower level objectives, actions etc.

This policy set out to achieve five key goals in transport:

- Reduce overall travel demand
- Maximise the efi ciency of the transport network
- Reduce reliance on fossil fuels
- Reduce transport emissions
- Improve accessibility to transport

These goals remain the cornerstone of transport policy and are fully aligned to the objectives of this National Policy Framework.

### Relevance to the Plan

Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.

#### Tourism Action Plan 2019-2021

The Tourism Action Plan 2019-2021 sets out actions that the Tourism Leadership Group has identifi ed as priorities to be progressed until 2021 in order to maintain sustainable growth in overseas tourism revenue and employment. Each action involves specifi c tourism stakeholders, both in the public and private sectors, all of whom we expect to proactively work towards the completion of actions within the specifi ed timeframe.

### Tourism Policy Statement: People, Place and Policy – Growing Tourism to 2025

The main goal of this policy statement is to have a vibrant, attractive tourism sector that makes a signifi cant contribution to employment across the country; is economically, socially and environmentally sustainable; helps promote a positive image of Ireland overseas, and is a sector in which people want to work.

### Summary of lower level objectives, actions etc.

The Plan contains 27 actions focusing on the following areas:

- Policy Context
- Marketing Ireland as a Visitor Destination
- Enhancing the Visitor Experience
- Research in the Irish Tourism Sector
- Supporting Local Communities in Tourism
- Wider Government Policy
- International Context
- Co-ordination Structures

### Relevance to the Plan

Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.

#### Regional/ County/Local Level

### Eastern and Midlands Regional Economic and Spatial Strategy 2019

The Regional Spatial and Economic Strategy provides a long-term strategic planning and economic framework for the Eastern and Midlands Region in order to support the implementation of the National Planning Framework.

### Summary of lower level objectives, actions etc.

The Eastern and Midlands Regional Economic and Spatial Strategy includes provisions for its twelve constituent local authorities: Fingal County Council, Dublin City Council, South Dublin County, Dún Laoghaire-Rathdown County Council; Louth County Council, Kildare County Council, Meath County Council, Wicklow County Council, Longford County Council, Laois County Council, Offaly County Council and Westmeath County Council.

### Relevance to the Plan

Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.

#### Greater Dublin Area (GDA) Transport Strategy (2016-2035)

This Strategy sets out how transport will be developed across the Greater Dublin Area, covering Dublin, Meath, Wicklow and Kildare.

- Vision Statement: "The GDA by 2022 is an economically vibrant, active and sustainable international Gateway Region, with strong connectivity across the GDA Region, nationally and worldwide; a region which fosters

### Summary of lower level objectives, actions etc.

Core principles deriving from the strategic vision:

- Dublin as the capital city of Ireland and a major European centre shall grow and progress, competing with other cities in the EU, and serving a wide range of international, national, regional and local needs.
- The Dublin and Mid-East Regions will be attractive, vibrant locations for industry, commerce, recreation and tourism and

### Relevance to the Plan

Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans, programmes, etc. – the achievement of the objectives of the regulatory framework.
### Legislation, Plan, etc.

<tr>
<td>Communities living in attractive, accessible places well supported by community infrastructure and enjoying high quality leisure facilities; and promotes and protects across the GDA green corridors, active agricultural lands and protected natural areas.”</td>
<td>will be a major focus for economic growth within the Country.</td>
<td>for environmental protection and management.</td>
<td></td>
</tr>
<tr>
<td>Full SEA and Stage 2 AA have been undertaken on this Strategy.</td>
<td>The GDA, through its ports and airport connections will continue to be the most important entry/exit point for the country as a whole, and as a Gateway between the European Union and the rest of the World. Access to and through the GDA will continue to be a matter of national importance.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Development in the GDA shall be directly related to investment in integrated high quality public transport services and focused on compact urban form.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Development within the existing urban footprint of the Metropolitan Area will be consolidated to achieve a more compact urban form</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Development in the Hinterland Area will be focused on the high quality integrated growth and consolidation of development in key identified towns, separated from each other by extensive areas of strategic green belt land devoted to agriculture and similar uses.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Integrated Implementation Plan 2019-2024</strong></td>
<td>The Transport Strategy for the Greater Dublin Area 2016-2035, which established an overall framework for transport investment over the next two decades and was subject to full SEA and Stage 2 AA, is a key policy shaping the six-year Integrated Infrastructure Plan. The priorities in the Integrated Infrastructure Plan align with the objectives and priorities set out in the Transport Strategy, focused on improving public and sustainable transport.</td>
<td>Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management.</td>
<td></td>
</tr>
<tr>
<td><strong>Greater Dublin Area Cycle Network Plan</strong></td>
<td>The Implementation Plan identifies investment proposals for a number of areas including:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sets out a ten year cycling strategy for Counties Dublin, Kildare, Meath and Wicklow.</td>
<td>• Bus;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Plan to increase regions cycle network dramatically</td>
<td>• Light Rail;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The Plan refers to the EuroVelo International Cycle Route Network of the European Cyclists Federation is a network of 15 long distance cycle routes connecting and uniting the whole European continent. Two of these routes are in Ireland including EV2 from Galway through Dublin to London, Berlin, Warsaw and Moscow.</td>
<td>• Heavy Rail;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Aims to identify and determine:</td>
<td>• Integration Measures and Sustainable Transport Investment;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• The Urban Cycle Network at the Primary, Secondary and Feeder level</td>
<td>• Integrated Service Plan; and</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• The Inter-Urban Cycle Network linking the relevant sections of the Urban Network including the elements of the National Cycle Network within the Greater Dublin Area including linkages to key transport locations outside of urban areas such as airports and ports.</td>
<td>• Integration and Accessibility.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• The Green Route Network being cycle routes for development of tourist, recreational and leisure purposes.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Water Quality Management Plans</strong></td>
<td>Ensure that the quality of waters covered by the plan is maintained.</td>

| NPWS Conservation Plans and/or Conservation Objectives for SACs and SPAs | Management planning for nature conservation sites has a number of aims. These include:  
- To identify and evaluate the features of interest for a site  
- To set clear objectives for the conservation of the features of interest  
- To describe the site and its management  
- To identify issues (both positive and negative) that might influence the site  
- To set out appropriate strategies/management actions to achieve the objectives | Conservation objectives for SACs and SPAs (i.e. sites within the Natura 2000 network) have to be set for the habitats and species for which the sites are selected.  
These objectives are used when carrying out appropriate assessments for plans and projects that might impact on these sites. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Groundwater Protection Schemes | A Groundwater Protection Scheme provides guidelines for the planning and licensing authorities in carrying out their functions, and a framework to assist in decision-making on the location, nature and control of developments and activities in order to protect groundwater. | A Groundwater Protection Scheme aims to maintain the quantity and quality of groundwater, and in some cases improve it, by applying a risk assessment-based approach to groundwater protection and sustainable development. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Dublin City Local Economic and Community Plan (LECP) 2016-2021 | The overarching vision for each LECP is: ”to promote the well-being and quality of life of citizens and communities” | The purpose of the LECP, as provided for in the Local Government Reform Act 2014, is to set out, for a six-year period, the objectives and actions needed to promote and support the economic development and the local and community development of the relevant local authority area, both by itself directly and in partnership with other economic and community development stakeholders. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Development Plans, including:  
Dublin City Development Plan 2016-2022 (as varied)  
Local Area Plans, including:  
George's Quay Local Area Plan 2012 (as extended) | Outline planning objectives for land use development (including transport objectives).  
Strategic framework for planning and sustainable development including those set out in National Planning Framework and Regional Economic and Spatial Strategies.  
Set out the policies and proposals to guide development in the specific Local Authority area. | Identify future infrastructure, development and zoning required.  
Protect and enhances amenities and environment.  
Guide planning authority in assessing proposals.  
Aim to guide development in the area and the amount of nature of the planned development.  
Aim to promote sustainable development.  
Provide for economic development and protect natural environmental, heritage. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Planning Schemes, including:  
North Lotts and Grand Canal Dock SDZ Planning Scheme 2014  
Poolbeg West SDZ Planning Scheme 2019 | An area of land designated by the Government to contain specified developments of economic or social importance to the State.  
Aim to create sustainable communities under a master plan to facilitate the requirements by which it was acquired by the State. | Development includes necessary infrastructural and community facilities and services. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |

| **Dublin Docklands Area 2008-2013 Masterplan** | The Master Plan is driven by five strategic priorities:  
- Accelerating physical rollout of development  
- Achieving genuine architectural legacy  
- Fulfilling the potential of the Docklands  
- Realising quality of life  
- Creating a sense of place | Sets out comprehensive guidance for the physical, economic and social regeneration of the entire functional area of Docklands, addressing issues such as land use transportation, infrastructure, urban design, arts, tourism and leisure. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
<p>| <strong>Dublin Port Masterplan 2040 – Reviewed 2018</strong> | The Masterplan sets out a vision for the operations of the port and land utilisation. This Masterplan seeks to ensure that no capacity constraints emerge in Dublin Port between now and 2040. | This Masterplan 2040 seeks to provide the necessary framework to allow these essential projects to be brought forward for planning and other consents and to be constructed in time to meet demand. The Masterplan is also intended to indicate to all of the Port’s stakeholders how the Port will be developed to meet their needs in the years ahead. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Various existing, planned and emerging projects provided for by the above plans and programmes including the Dublin Waste to Energy Facility project, S2S – Dollymount, promenade and flood protection project, S2S – Cycleway and Footway, North City Arterial Watermain and Clontarf Flood defences project, Waste Water Treatment Plan Extension works at Ringsend Alexandra Basin Redevelopment Project, Dublin Eastern Bypass Project (feasibility/pre-planning etc.), Water Supply Project Eastern and Midland Region (feasibility/pre-planning etc.) | These projects have been provided for by higher level plans and programmes. | These projects will contribute towards the development of the Dublin Docklands and/or wider area and will contribute towards environmental protection and management. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |</p>

| Green Infrastructure Plans/Strategies | • Promotes the maintenance and improvement of green infrastructure in an area.  
• Aims to protect and enhance biodiversity and habitats. | not applicable | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Dublin City Biodiversity Action Plan 2015-2020 | Aims to protect, conserve, enhance and restore biodiversity and ecosystem services across all spectrums. | • Outlines the status of biodiversity and identifies species of importance.  
• Outlines objectives and targets to be met to maintain and improve biodiversity.  
• Aims to increase awareness | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Draft Climate Change Action Plans 2019 - 2024 | Dublin’s four local authorities have joined together to develop Climate Change Action Plans as a collaborative response to the impact that climate change is having, and will continue to have, on the Dublin Region and its citizens. While each plan is unique to its functional area, they are unified in their approach to climate change adaptation and mitigation, and their commitment to lead by example in tackling this global issue. | These Plans include actions for: Energy and Buildings, Transport, Flood Resilience, Nature-Based Solutions and Resource Management. The actions seek to facilitate:  
• A 33% improvement in the Councils’ energy efficiency by 2020.  
• A 40% reduction in the Councils’ greenhouse gas emissions by 2030.  
• Make Dublin a climate resilient region, by reducing the impacts of future climate change - related events.  
• Actively engage and inform citizens on climate change. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans, programmes, etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Easter and Midlands Region Waste Management Plan 2015-2021 | The plan gives effect to national and EU waste policy, and address waste prevention and management (including generation, collection and treatment) over the period 2015-2021. | To manage wastes in a safe and compliant manner, a clear strategy, policies and actions are required. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection and management. |
| Dublin City Noise Action Plan 2018-2023 | The Noise Action Plans are prepared in accordance with the requirements of the Environmental Noise Regulations 2006, Statutory Instrument 140 of 2006. These Regulations give effect to the EU Directive 2002/49/EC relating to the assessment and management of environmental noise. This Directive sets out a process for managing environmental noise in a consistent manner across the EU and the Noise Regulations set out the approach to meeting the requirements of the Directive in Ireland. | The main purpose of the Noise Action Plan is to:  
• Inform and consult the public about noise exposure, its effects and the measures which may be considered to address noise problems  
• Address strategic noise issues by requiring competent authorities to draw up action plans to manage noise issues and their effects  
• Reduce noise, where possible, and maintain the environmental acoustic quality where it is good | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection. |

| **Wild Atlantic Way Operational Programme 2015-2019** | The vision for the Wild Atlantic Way brand is: To create a world class, sustainable and un-missable experience brand that engages and energises the visitor so that they become powerful advocates and leaves them wanting to return for more. | The goals and outcomes of the Wild Atlantic Way are presented here under the headings of the ‘VICE’ model, a recognised tourism model for sustainable development and which considers the four key and interdependent elements of Visitor, Industry, Community and Environment.  
- To ensure that the Wild Atlantic Way brand is compelling to our target market segments and that the Wild Atlantic Way itself becomes a world-class visitor experience.  
- To ensure that the Wild Atlantic Way delivers balanced and sustainable revenue and jobs growth with greater geographic and seasonal spread  
- To ensure that the Wild Atlantic Way delivers benefits to local communities in the west of Ireland and contributes to a better place to live for everyone.  
To ensure that the implementation of the Wild Atlantic Way Operational Programme facilitates the protection and enhancement of the environment of the west of Ireland – as the fundamental asset that is the basis of the Wild Atlantic Way – in association with other key stakeholders. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection. |
| **Fáilte Ireland plans, strategies etc. relating to the Wild Atlantic Way, Ireland’s Ancient East or other brands or initiatives** | Fáilte Ireland’s work includes preparing various plans and strategies for the Wild Atlantic Way, Ireland’s Ancient East and other brands and initiatives. These plans are subject to their own environmental assessment processes and any project arising is required to be consistent with and conform with the provisions of all adopted/approved Statutory Policies, Strategies, Plans and Programmes, including provisions for the protection and management of the environment. | Some of Fáilte Ireland’s plans and strategies include various projects relating to land use and infrastructural development, including those relating to development of land or on land and the carrying out of land use activities. Many of these projects exist already while some are not currently in existence.  
The Statutory Policies, Strategies, Plans and Programmes that provide for different projects undergo a variety of environmental assessments. These assessments ensure that environmental effects are considered, including: those arising from new and intensified uses and activities; and those arising from various sectors such as tourism. | Implementation of the Plan needs to comply with all environmental legislation and align with and cumulatively contribute towards – in combination with other users and bodies and their plans etc. – the achievement of the objectives of the regulatory framework for environmental protection. |
